

**Consumer Confidence Report  
Certification Form**  
*(To be submitted with a copy of the CCR)*

Water System Name: Coachella Valley Water District: Improvement District No. 11

Water System Number: CA 1310011

The water system named above hereby certifies that its Consumer Confidence Report was distributed on June 28, 2019 to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by: Name: Wilfred G. Gonzalez  
Signature: Wilfred G. Gonzalez  
Title: Water Quality Supervisor  
Phone Number: (760) 398-2651 Date: 9/23/19

*To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:*

- CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used). **See Attachment A for all delivery methods.**
- CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page). **See Attachment A for all delivery methods.**
- "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods: **See Attachment A for all delivery methods.**
  - Posting the CCR at the following URL: [www.cvwd.org](http://www.cvwd.org)
  - Mailing the CCR to postal patrons within the service area (attach zip codes used)
  - Advertising the availability of the CCR in news media (attach copy of press release)
  - Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
  - Posted the CCR in public places (attach a list of locations) **See footnote (1)**
  - Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
  - Delivery to community organizations (attach a list of organizations) **See footnote (1)**
  - Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
  - Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized) **See Attachment A for all delivery methods.**
  - Other (attach a list of other methods used)
- For systems serving at least 100,000 persons:* Posted CCR on a publicly-accessible internet site at the following URL:
- For privately-owned utilities:* Delivered the CCR to the California Public Utilities Commission

(1) CVWD provides CCR copies in CVWD's three lobbies (two in Palm Desert and one in Coachella; and hand-delivered CCR copies to local public libraries (La Quinta, Palm Desert and Rancho Mirage), local city halls (Cathedral City, La Quinta, Palm Desert and Rancho Mirage), and senior center (La Quinta). CVWD will continue to provide CCR copies at public events during 2019-20 and in New Customer Welcome Packets.

## **Consumer Confidence Report Electronic Delivery Certification**

---

*Water systems utilizing electronic distribution methods for CCR delivery must complete this page by checking all items that apply and fill-in where appropriate.*

- Water system mailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available website where it can be viewed (attach a copy of the mailed CCR notification).  
URL: [www.cwwd.org/ccr/2019](http://www.cwwd.org/ccr/2019)
- Water system emailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available site on the Internet where it can be viewed (attach a copy of the emailed CCR notification). URL: [www.cwwd.org/ccr/2019](http://www.cwwd.org/ccr/2019)
- Water system emailed the CCR as an electronic file email attachment.
- Water system emailed the CCR text and tables inserted or embedded into the body of an email, not as an attachment (attach a copy of the emailed CCR).
- Requires prior DDW review and approval.* Water system utilized other electronic delivery method that meets the direct delivery requirement.

*Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery.*

**Please see Attachment A for all delivery methods, including electronic.**

*This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c) of the California Code of Regulations.*

**This annual report communicates the results of CVWD's water quality monitoring.**  
**The State Water Resources Control Board Division of Drinking Water (DDW) and the**  
**U.S. Environmental Protection Agency (USEPA) require routine and comprehensive**  
**monitoring of CVWD's drinking water supply.**

**CVWD'S COMMITMENT**

Coachella Valley Water District is committed to delivering high quality drinking water. Water is delivered to customers from wells drilled into the Coachella Valley's groundwater basin. Highly trained employees routinely monitor CVWD's public water systems and collect drinking water samples that are tested at CVWD's state-certified laboratory.

A few specialized tests are performed by other certified laboratories. In addition to the detected constituents listed in the table on pages 6 – 7, CVWD's Water Quality staff monitors for more than 100 other regulated and unregulated chemicals that are not detected during this monitoring.

CVWD is governed by a locally elected, five-member board of directors that generally meets in public session at 8 a.m. on the second and fourth Tuesdays of each month. Meeting locations relate at 51501 Tyler St. and the Steve Robbins Administration Building at 75155 Hovley Lane East in Palm Desert. Call CVWD to confirm meeting time, date and location.

**SENSITIVE POPULATIONS**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers.

USEPA/Centers for Disease Control (CDC) guidelines, on appropriate means to lessen the risk of infection by Cryptosporidium (a microbial pathogen found in surface water throughout the United States) and other microbial

**POTENTIAL CONTAMINANTS**

**About Nitrate**

Nitrate (as nitrogen) in drinking water at levels above 10 milligrams per liter (mg/L) is a health risk for infants younger than six months. High nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in serious illness. Symptoms include shortness of breath and blueness of skin. Nitrate (as nitrogen) in drinking water levels above 10 milligrams per liter (mg/L) may also affect the ability of blood to carry oxygen in other individuals, such as pregnant women and those with certain enzyme deficiencies. If you are caring for an infant or you are pregnant, you should ask for advice from your health care provider.

Wells that confirm with nitrate levels (as nitrogen) above 10 mg/L are removed from service.

**About Lead**

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing.

CVWD is responsible for providing high quality drinking water but cannot control the variety of materials used in customer plumbing components.

**Tip**

When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds before using water for drinking or cooking. You can capture this flushed water in a container and use it for watering plants.

**Resource Information**

If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Information Hotline or at [www.epa.gov/lead](http://www.epa.gov/lead).

As noted, all drinking water served by CVWD comes from wells. DDW requires water agencies to take, however, the sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells.

"As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity."

**SCHOOL REQUESTS**

In 2018, CVWD received zero requests for lead monitoring assistance within local schools.

**CONTAMINANTS THAT MAY BE PRESENT IN SOURCE WATER INCLUDE:**

**Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.**

**Inorganic contaminants, such as salts and metals, that can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.**

**Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.**

**Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems.**

**Chromium-6**

See full story on page 10 or for information about chromium-6.

**Radon**

Radon is a naturally occurring, radioactive gas — a byproduct of uranium — that originates underground and is found in homes primarily through cracks and holes in their foundations. While most radon enters the home through soil, radon from tap water (typically) is less than two percent of the radon in indoor air.

The USEPA has determined that breathing radon gas increases an individual's chances of developing lung cancer, and has proposed an MCL of 300 picocuries per liter (pCi/L) for radon in drinking water. This proposed standard is far less than the 4,000 pCi/L in water that is equivalent to the radon level found in outdoor air. The radon level in CVWD wells ranges from none detected to 450 pCi/L, significantly lower than that found in the air you breathe.

The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of some contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Information Hotline (1-800-426-4791) or the National Radiation Hotline (1-800-767-7236)."

**ADDITIONAL INFORMATION**

For lead monitoring assistance within local schools.

**DRINKING WATER SOURCE WATER ASSESSMENTS:**

CVWD has conducted source water assessments that provide information about the vulnerability of CVWD wells to contamination. In 2002, CVWD completed a comprehensive source water assessment that evaluated all groundwater wells supplying the CVWD's six public water systems. An assessment is performed on each new well added to CVWD's system.

Groundwater from these CVWD wells is considered vulnerable to activities associated with urban and agricultural uses.

Urban land uses include the following activities: known contaminant plumes, dry cleaners, underground storage tanks, septic systems, automobile gas repair shops, historic waste dumps/landfills, illegal/unauthorized dumping, sewer collection systems and utility stations/maintenance areas.

Agricultural land uses include the following activities: irrigation/agricultural wells, irrigated crops, pesticide/fertilizer/petroleum and transfer areas.

**THE FOLLOWING ACTIVITIES HAVE BEEN ASSOCIATED WITH DETECTED CONTAMINANTS:**

**Known Contaminant Plumes, Dry Cleaners and Septic Systems**

Radioactive contaminants that can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, USEPA and Dow prescribe regulations that limit the amount of certain contaminants in water provided by public water systems.

CVWD is committed to supplying high quality drinking water from CVWD's wells to our communities.

**DEFINITIONS & ABBREVIATIONS**

**At or Regulation Action Level**

The concentration of a contaminant which, if exceeded triggers treatment or other requirements which a water system must follow.

**MCL or Maximum Contaminant Level**

The highest level of a contaminant that is allowed in drinking water. Many MCLs are set to protect public health goals or maximum contaminant level goals as economically and technically feasible. MCLs are set to protect the health and appearance of drinking water.

**MCL or Maximum Contaminant Level Goal**

Level of a contaminant that is allowed in drinking water below which there is no appreciable risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

**mg/L or Milligrams per liter (parts per million or ppm)**

One mg/L is equivalent to 1 second in 1,250 days.

**NTU or Maximum Treatment Effect Level**

The highest level of a contaminant allowed in drinking water. There is compelling evidence that additional costs do not decrease health risks.

**NTU or Maximum Residual Disinfectant Level Goal**

The level of a disinfectant allowed in drinking water below which there is no known or expected risk to health. MCLGs do not reflect the benefits of the use of disinfectants to protect microbial contaminants.

**NTU or Not Applicable**

The government has not set a Public Health Goal. MCLs and MCLGs are set for this substance.

**NTU or None Detected**

One NTU is equivalent to 1 second in 52,000 years.

**NTL or Notification Level**

Health based advisory level established by the DDW for chemicals in drinking water that maximize contaminant levels. NTLs are set by DDW.

**NTU or Nephelometric Turbidity Units**

Requirement of suspended material.

**pCi/L – picocuries per liter**

For radon, one pCi/L is equivalent to 1 second in 21 years.

**PPM or Primary Drinking Water Standard**

MCLs and MCLGs for contaminants that affect health along with their monitoring and reporting requirements, and MCLs for treatment requirement.

**PPM or Public Health Goal**

Level of a contaminant in drinking water below which there is no known or expected risk to health. Public Health Goals are set by the California Environmental Protection Agency.

**ug/L or Micrograms per liter (parts per billion or ppb)**

One ug/L is equivalent to 1 second in 52 years.

**uS/cm – Micromhos per centimeter**

Information Hotline (1-800-767-7236).

CVWD is committed to supplying high quality drinking water from CVWD's wells to our communities.

## WHAT'S IN MY WATER?

CVWD analyzed more than 18,000 water samples last year to monitor the water quality of drinking water delivered to its customers. Every year, CVWD is required to analyze a select number of these samples for more than 100 regulated and unregulated substances. This table lists those substances that were detected in CVWD's three service areas. Gray boxes indicate the substance was not detected (ND), existing data is no longer reportable, or there is no available data. The data on the chart summarizes results of the most recent monitoring completed between 2010 and 2018. CVWD did not have any Maximum Contaminant Level (MCL) violations in 2018.

## TO READ THIS TABLE

First, determine your service area by referring to footnotes 2, 3 and 4 on the opposite page. Then move down the corresponding column, comparing the detection level of each chemical or other contaminant with the Public Health Goal (PHG), Maximum Contaminant Level Goal (MCG) and MCL.

For example, if you live in La Quinta and want to know the level of fluoride detected in your service area, you would look down the Cove Communities column and stop at the fluoride row. The average fluoride level in that service area is 0.6 mg/L with the range of results varying between 0.1 mg/L and 1.0 mg/L. Compare these values to the MCL in the third column. Fluoride levels in this water comply with the MCL of 2.0 mg/L. The range can show a level above the MCL and still comply with the drinking water standard when compliance is based on average levels found in each water source or water system.

## CVWD 2019 DOMESTIC WATER QUALITY SUMMARY

Covering the reporting period January - December 2018

DETECTED PARAMETER, UNITS	PHG or (MCLG)	MCL <sup>1</sup>	COVE COMMUNITIES <sup>2</sup> RANGE (AVERAGE)	ID NO. 8 <sup>3</sup> RANGE (AVERAGE)	ID NO. 11 <sup>4</sup> RANGE (AVERAGE)	MAJOR SOURCE(S)	MCL VIOLATION? (YES/NO)
Arsenic, ug/L	0.004	10	ND-9.4 (ND)	ND-0.1 (ND)	No	Erosion of natural deposits	No
Barium, mg/L	2	1	ND-2.130 (21)	11-26 (16)	270-620 (390)	No	Erosion of natural deposits
Chloride, mg/L	N/A	500-600 <sup>5</sup>	MARDL	ND-3.5 (0.5)	ND-2.0 (0.6)	No	Leaching from natural deposits
Chlorine (as Cl), mg/L <sup>6</sup>	MARDL 4	4.0	(100)	50	16-24 (20)	No	Result of drinking water chlorination
Chromium-6, ug/L <sup>7</sup>	0.02	N/A	ND-23 (8.8)	16-20 (17)	No	Erosion of natural deposits	No
Copper, mg/L <sup>8</sup>	0.3	AL=1.3	[51/70]	0.11	0.09	0.17 [22/0]	No
Copper, mg/L	None	1.0 <sup>9</sup>	ND-0.56 (ND)	ND-0.08 (ND)	No	Internal corrosion of household plumbing	No
Dibromoethopropane (DECP), ng/L	1.7	200	0.1-1.0 (0.6)	0.4-0.7 (0.5)	0.6-1.5 (1.1)	No	Leaching from natural deposits
Fluoride, mg/L	1	2.0	ND-15 (ND)	ND-6.9 (3.5)	ND-4.6 (ND)	No	Erosion of natural deposits
Gross alpha particle activity, pCi/L	(0)	15	ND-1.7 (1.8)	ND-1.1 (1.1)	1.7-2.5 (2.5)	No	Byproduct of drinking water chlorination
Halocyclic Acids, ug/L <sup>10</sup>	N/A	60	9.3-310 (120)	68-210 (130)	210-520 (350)	No	Erosion of natural deposits
Hardness (as CaCO <sub>3</sub> ), mg/L	N/A	10	ND-9.0 (1.2)	0.5-1.1 (0.7)	1.5-4.1 (2.8)	No	Leaching of fertilizer, animal wastes or natural deposits
Nitrate (as Nitrogen), mg/L	None	3 <sup>11</sup>	ND-2.0 (ND)	ND-1.1 (1.1)	No	Naturally occurring organic materials	No
Odor as threshold, units pH, units	N/A	7.3-8.5 (7.9)	7.6-8.1 (7.9)	7.2-7.7 (7.5)	No	Physical characteristic	No
Sodium, mg/L	N/A	19-130 (32)	67-88 (74)	67-260 (190)	No	Erosion of natural deposits	No
Specific conductance, uS/cm	N/A	1,600-2,200 <sup>12</sup>	240-1,100 (390)	530-840 (640)	1,600-2,800 (2,100)	No	Substances that form ions when in water
Sulfate, mg/L	N/A	500-600 <sup>13</sup>	0.6-270 (50)	150-240 (180)	240-360 (310)	No	Leaching from natural deposits
Total Coliform bacteria, positive samples/month	(0)	5% or $\mu$ l <sup>14</sup>	ND-1% (ND)	7.6-8.1 (7.9)	7.2-7.7 (7.5)	No	Naturally present in the environment
Total dissolved solids, mg/L	N/A	1,000-1,500 <sup>15</sup>	140-600 (250)	330-560 (420)	930-1,600 (1,200)	No	Leaching from natural deposits
Total trihalomethanes, ug/L <sup>16</sup>	N/A	80	ND-18 (16)	ND-15 (15)	11-18 (18)	No	Byproduct of drinking water chlorination
Turbidity, NTU	None	5 <sup>17</sup>	ND-13 (ND)	ND-0.2 (ND)	No	Leaching from natural deposits	
Uranium, pCi/L	0.43	20	ND-13 (4.5)	1.9-4.1 (3.2)	2.4-29 (2.6)	No	Erosion of natural deposits
<b>2015 UNREGULATED CONTAMINANT MONITORING<sup>18</sup></b>							
Chlorate, ug/L <sup>19</sup>	N/A	NL=600	ND-52 (ND)	ND-0.18 (ND)	No	Byproduct of drinking water chlorination	No
Chlorodifluoromethane (MFC-22), ug/L <sup>19</sup>	N/A	N/A	ND-0.14 (ND)	ND-0.14 (ND)	No	Refrigerant	No
1,4-Dioxane, ug/L <sup>19</sup>	N/A	NL=1	ND-19 (8.7)	ND-19 (8.7)	No	Leaching from historical disposal sites	No
Methylbenzene, ug/L <sup>19</sup>	N/A	N/A	140-2,000 (420)	140-2,000 (420)	No	Erosion of natural deposits	No
Strontium, ug/L <sup>19</sup>	N/A	NL=50	4.9-36 (17)	4.9-36 (17)	No	Erosion of natural deposits	No
Vanadium, ug/L <sup>19</sup>	N/A	N/A	N/A	N/A	N/A	N/A	N/A

## MORE INFORMATION

To receive a summary of CVWD's source water assessments or additional water quality data or clarification, call CVWD's Water Quality Division at (760) 258-2651.  
Complete copies of source water assessments may be viewed at CVWD's office at 75-525 Hovley Lane East, Palm Desert, CA 92261.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien. También puede llamar al CVWD al número de teléfono (760) 258-2651 o vaya a [www.cvwd.org/ActiveCenter/ViewFile/Item/708](http://www.cvwd.org/ActiveCenter/ViewFile/Item/708).  
Nota: Above statement fulfills California State of Regulations requirement in section 644(f)(1).

# Este informe anual comunica los resultados del control de calidad del agua del CVWD. La División de Agua Potable (DDW) de la Junta Estatal de Control de Recursos de Agua y la Agencia de Protección Ambiental de los Estados Unidos (USEPA) requieren el control de rutina e integral del suministro de agua potable del CVWD.

## EL COMPROMISO DEL CVWD

El Coachella Valley Water District está comprometido a suministrar agua potable de alta calidad. El agua se distribuye a los clientes a partir de pozos perforados en la cuenca de aguas subterráneas del Valle de Coachella.

Empleados sólidamente capacitados controlan los sistemas públicos de agua del CVWD y toman muestras de agua potable, que se analizan en el laboratorio del CVWD certificado por el estado.

Algunos análisis especializados son realizados por otros laboratorios certificados. Además de los componentes detectados listados en la tabla de las páginas 6 y 7, el personal de Calidad del Agua del CVWD controla más de 100 sustancias químicas reguladas y no reguladas que no son detectadas durante este control.

El CVWD se rige por una Junta Directiva de cinco miembros elegidos a nivel local que se reúne generalmente en sesión pública a las 8:00 a. m. el segundo y el cuarto martes de cada mes. Los lugares de reunión rotan entre la oficina de Coachella del CVWD en 51-501 Tyler St. y el Edificio de Administración Steve Robbins en 75-515 Hovley Lane East en Palm Desert. Llame al CVWD para confirmar la hora, la fecha y el lugar de la reunión.

## POBLACIONES SENSIBLES

Algunas personas pueden ser más vulnerables a los contaminantes presentes en el agua potable que la población general. Las personas inmunodeprimidas, por ejemplo, personas con cáncer que reciben quimioterapia, personas que han recibido trasplantes de órganos, personas con VIH/SIDA u otros trastornos del sistema inmunológico, algunas personas mayores y niños pueden estar particularmente en riesgo de infecciones. Estas personas deben consultar sobre el agua potable a sus proveedores de atención médica.

Hay disponibles guías de la USEPA y de los Centros para el Control de Enfermedades (CDC) sobre los medios para disminuir el riesgo de infección por criptosporidio (un patógeno microbiano que se encuentra en las aguas superficiales en los Estados Unidos) y otros contaminantes microbianos a través

de la Línea directa del agua potable segura al 1-800-426-4791 o en [www.epa.gov/ground-water-and-drinking-water/safe-drinking-water-information](http://www.epa.gov/ground-water-and-drinking-water/safe-drinking-water-information). Llame a la Línea directa del agua potable segura para obtener el enlace actualizado si es necesario.

## ELEMENTOS DE ORIGEN NATURAL

### Arsénico

Si bien todos los suministros de agua para uso doméstico del CVWD cumplen con las normas estatales y federales para el arsénico, el agua potable suministrada a algunas áreas de servicio contiene niveles bajos de arsénico de origen natural. La norma para el arsénico equilibra la comprensión actual de los posibles efectos sobre la salud del arsénico frente a los costos de eliminar el arsénico del agua potable. La USEPA continúa investigando los efectos sobre la salud de niveles bajos de arsénico, que es un mineral conocido por causar cáncer en los seres humanos a altas concentraciones y está vinculado a otros efectos, como daños en la piel y problemas circulatorios. Toda el agua potable distribuida por el CVWD el año pasado cumplió con el nivel máximo de contaminante (MCL) de 10 microgramos por litro ( $\mu\text{g/l}$ ).

### Radón

El radón es un gas radiactivo de origen natural (un subproducto del uranio) que se origina subterráneamente, pero se encuentra en el aire. El radón se traspasa desde el suelo a las casas principalmente a través de grietas y orificios en sus cimientos. Mientras que la mayoría del radón entra a la casa a través del suelo, el radón del agua de la llave, por lo general, es menos del dos por ciento del radón en el aire interior.

La USEPA ha determinado que respirar gas radón aumenta las posibilidades de que una persona desarrolle cáncer de pulmón, y se ha propuesto un MCL de 300 picocurles por litro ( $\text{pCi/l}$ ) para el radón en el agua potable. Esta norma propuesta es mucho menor que los 4,000  $\text{pCi/l}$  en el agua que es equivalente al nivel de radón que se encuentra en el aire exterior. El nivel de radón en los pozos del CVWD oscila entre no detectado a 460  $\text{pCi/l}$ , que es significativamente menor que el encontrado en el aire que respira.

## CONTAMINANTES POTENCIALES

### Acerca del nitrato

El nitrato (como nitrógeno) en el agua potable a niveles por encima de 10 miligramos por litro ( $\text{mg/l}$ ) es un riesgo para la salud para bebés de menos de seis meses. Los altos niveles de nitrato en el agua potable pueden interferir con la capacidad de la sangre del bebé para transportar oxígeno, lo que resulta en una enfermedad grave. Los síntomas incluyen dificultad para respirar y piel azulada. El nitrato (como nitrógeno) en el agua potable a niveles por encima de 10 miligramos por litro ( $\text{mg/l}$ ) también puede afectar la capacidad de la sangre para transportar oxígeno en otras personas, tales como mujeres embarazadas y personas con ciertas deficiencias enzimáticas. Si está al cuidado de un bebé o si está embarazada, debe pedir consejo a su proveedor de atención médica.

Los pozos que confirman niveles de nitrato (como nitrógeno) por encima de 10  $\text{mg/l}$  son eliminados del servicio.

### Acerca del plomo

Si está presente, los niveles elevados de plomo pueden causar graves problemas de salud, especialmente para mujeres embarazadas y niños pequeños. El plomo en el agua potable proviene principalmente de materiales y componentes asociados con líneas de servicio y plomería de la casa.

### Responsabilidad

El CVWD es responsable de proporcionar agua potable de alta calidad, pero no puede controlar la variedad de materiales utilizados en los componentes de plomería de los clientes.

### Consejo

Cuando el agua ha estado asentada durante varias horas, puede minimizar el potencial de exposición al plomo dejando correr el agua durante 30 segundos antes de usar el agua para beber o cocinar. Puede recolectar esta agua en un recipiente y utilizarla para regar las plantas.

### Información acerca del recurso

Si usted está preocupado por el plomo en el agua, se recomienda que analice el agua. La información sobre el plomo en el agua potable, los métodos de análisis y los pasos que puede tomar para minimizar la exposición está disponible en la Línea directa del agua potable segura o en [www.epa.gov/lead](http://www.epa.gov/lead).

Como se ha señalado, toda el agua potable distribuida por el CVWD proviene de pozos. No obstante, el DDW requiere que las agencias de agua indiquen lo siguiente: "las fuentes de agua potable (agua de la llave y agua embotellada) incluyen ríos, lagos, arroyos, lagunas, embalses, manantiales y pozos.

"A medida que el agua se desplaza sobre la superficie de la tierra o a través del suelo, disuelve minerales naturales y, en algunos casos, material radiactivo, y puede recolectar sustancias resultantes de la presencia de animales o de actividad humana".

#### Solicitudes escolares

En el 2018, el CVWD no recibió ninguna solicitud de asistencia de monitoreo de plomo dentro de las escuelas locales.

#### LOS CONTAMINANTES QUE PUEDEN ESTAR PRESENTES EN EL AGUA INCLUYEN:

**Contaminantes microbianos**, como virus y bacterias, que pueden provenir de plantas de tratamiento de aguas residuales, sistemas sépticos, operaciones de explotación ganadera y fauna silvestre.

**Contaminantes inorgánicos**, como sales y metales, que pueden ser de origen natural o resultar de la escorrentía de aguas pluviales urbanas, descargas de aguas residuales industriales o domésticas, producción de petróleo y gas, la minería o la agricultura.

**Pesticidas y herbicidas** que pueden provenir de una variedad de fuentes como la agricultura, del desagüe pluvial y los usos residenciales.

**Contaminantes químicos orgánicos**, incluyendo productos químicos orgánicos sintéticos y volátiles, que son subproductos de procesos industriales y de la producción de petróleo, y que también pueden provenir de gasolineras, desagües pluviales y sistemas sépticos.

#### Cromo hexavalente

Vea el artículo completo en la página 10. Si desea obtener información acerca del cromo hexavalente, visite nuestro sitio web en [www.cvwd.org/cr6](http://www.cvwd.org/cr6).

**Contaminantes radiactivos** que pueden ser de origen natural o ser el resultado de las actividades de producción de petróleo y gas y la minería.

Con el fin de asegurar que el agua de la llave es segura para beber, la USEPA y la DDW prescriben regulaciones que limitan la cantidad de ciertos contaminantes en el agua suministrada por los sistemas públicos de agua.

Las regulaciones de la Administración de Alimentos y Medicamentos de los EE. UU.

y la ley de California también establecen límites de contaminantes en el agua embotellada que deben proporcionar la misma protección para la salud pública. "El agua potable, incluida el agua embotellada, podría esperarse razonablemente que contenga al menos pequeñas cantidades de algunos contaminantes. La presencia de contaminantes no indica necesariamente que el agua represente un riesgo para la salud. Puede obtener más información sobre los contaminantes y los efectos potenciales para la salud llamando a la Línea directa del agua segura de la USEPA (1-800-426-4791) o a la Línea directa nacional sobre el radón (1-800-767-7236)".

Además, las tablas de recomendaciones para la salud de la USEPA están disponibles en [www.epa.gov/dwstandardsregulations/2018-drinking-water-standards-and-advisory-tables](http://www.epa.gov/dwstandardsregulations/2018-drinking-water-standards-and-advisory-tables).

#### FUENTE DE AGUA POTABLE EVALUACIONES DEL AGUA:

El CVWD ha llevado a cabo evaluaciones de la fuente de agua que proporcionan información sobre la vulnerabilidad de los pozos del CVWD a la contaminación. En el 2002, el CVWD completó una evaluación exhaustiva de la fuente de agua que evaluó todos los pozos de aguas subterráneas que abastecen seis sistemas públicos de agua del CVWD. La evaluación se realiza en cada pozo nuevo incorporado al sistema del CVWD.

El agua subterránea de estos pozos del CVWD se considera vulnerable a las actividades relacionadas con los usos urbanos y agrícolas.

Los usos de suelo urbano incluyen las siguientes actividades: columnas de contaminantes conocidos, tintorerías, tanques de almacenamiento subterráneo, sistemas sépticos, gasolineras (incluidas las que están en desuso), talleres de reparación de automóviles, vertederos o rellenos sanitarios históricos, vertidos ilegales o no autorizados, sistemas de alcantarillado y áreas de mantenimiento de estaciones de servicios públicos.

Los usos de la tierra agrícola incluyen las siguientes actividades: pozos agrícolas o de riego, cultivos de regadío, áreas de pesticidas/ fertilizante/petróleo y de transferencia.

Las siguientes actividades se han asociado con contaminantes detectados: columnas de contaminantes conocidos, tintorerías y cultivos de regadío.

El CVWD está comprometido a suministrar agua potable de alta calidad proveniente de los pozos del CVWD a nuestras comunidades.

#### DEFINICIONES Y ABREVIATURAS

##### AL o nivel de acción reglamentario

La concentración de un contaminante que, si se excede, activa el tratamiento u otros requisitos que debe seguir un sistema hidráulico.

##### MCL o nivel máximo de contaminante

El nivel más alto de un contaminante que se permite en el agua potable. Los MCL primarios se establecen tan cerca de las metas de salud pública o de las metas de nivel máximo de contaminante como sea económica y tecnológicamente posible. Los MCL secundarios se establecen para proteger el olor, sabor y apariencia del agua potable.

##### MCLG o meta de nivel máximo de contaminante

Nivel de un contaminante en el agua potable por debajo del cual no hay riesgo conocido o esperado para la salud. Las MCLG son establecidas por la Agencia de Protección Ambiental de los EE. UU.

##### mg/L o miligramos por litro (partes por millón o ppm)

Un mg/L es equivalente a 1 segundo en 11.5 días.

##### MRDL o nivel máximo de desinfectante residual

El nivel más alto de desinfectante permitido en el agua potable. Existen pruebas convincentes de que la adición de un desinfectante es necesario para el control de contaminantes microbianos.

##### MRDLG o meta de nivel máximo de desinfectante residual

El nivel de un desinfectante de agua potable por debajo del cual no hay riesgo conocido o esperado para la salud. Las MRDLG no reflejan los beneficios del uso de desinfectantes para controlar contaminantes microbianos.

##### N/A - No aplicable

El gobierno no ha puesto una meta de salud pública, meta de nivel máximo de contaminante o nivel máximo de contaminante para esta sustancia.

##### ND - No detectado

##### ng/L - nanogramos por litro (partes por billón o ppt)

Un ng/L es equivalente a 1 segundo en 32,000 años.

##### NL o nivel de notificación

El nivel de advertencia de salud establecido por la DDW para sustancias químicas en el agua potable que carece de los niveles máximos de contaminante (MCL) como lo indica la DDW.

##### NTU - Unidades de turbidez nefelométrica

Medición del material suspendido

##### pCi/L - picocurries por litro

Para el uranio, un pCi/L es equivalente a 1 segundo en 21 años.

##### PDWS o Normas primarias para el agua potable

Los MCL y MRDL para contaminantes que afectan la salud junto con su control y requisitos de generación de informes y el requisito de tratamiento del agua.

##### PHG o meta de salud pública

Nivel de un contaminante en el agua potable por debajo del cual no hay riesgo conocido o esperado para la salud. Salud pública Las metas son establecidas por la Agencia de Protección Ambiental de California.

##### ug/L-microgramos por litro (partes por mil millones o ppm)

Un ug/L es equivalente a 1 segundo en 32 años.

##### uS/cm – microSiemens por centímetro

## ¿QUE HAY EN MI AGUA?

El CVWD analizó más de 18,000 muestras de agua el año pasado para controlar la calidad del agua potable que se distribuye a los clientes. Cada año, el CVWD debe analizar un número determinado de estas muestras para detectar más de 100 sustancias reguladas y no reguladas. Esta tabla enumera las sustancias que se detectaron en las tres áreas de servicio del CVWD. Los resultados indican que no se detectó la sustancia (ND), los datos existentes ya no se deben informar o no hay datos disponibles. Los datos de la tabla resumen los resultados del control más reciente completado entre 2010 y 2018. El CVWD no tuvo ninguna violación de niveles máximos de contaminante (MCL) en 2018.

## PARA LEER ESTA TABLA.

En primer lugar, determine su área de servicio, haciendo referencia a las notas 2, 3 y 4 en la página opuesta. Luego desplácese hacia abajo en la columna correspondiente, comparando el nivel de detección de cada contaminante químico o de otro tipo con la meta de salud pública (MCL), la meta de nivel máximo de contaminante (MCLG) y el MCL.

Por ejemplo, si usted vive en La Quinta y quiere saber el nivel de fluor detectado en su área de servicio, debe buscar en la columna de Cove Communities y detenerse en la fila ce fluor. El nivel promedio de fluor en esa área de servicio es de 0.6 mg/l, con el rango de resultados que varía entre 0.1 mg/l y 1.0 mg/l.

Compare estos valores con el MCL en la tercera columna. Los niveles de fluor en esta agua cumplen con el MCL de 2.0 mg/l. El rango puede mostrar un nivel por encima del MCL y aun así cumplir con la norma de agua potable cuando el cumplimiento se basa en los niveles promedio que se encuentran en cada fuente de agua o sistema hidráulico.

## RESUMEN DE CALIDAD DEL AGUA PARA CONSUMO DOMÉSTICO DE 2019 DEL CVWD

Que cubre el período de enero a diciembre de 2018

PARÁMETRO DETECTADO, UNIDADES	PHG o (MCLG)	MCL <sup>a</sup>	COVE COMMUNITIES <sup>b</sup> RANGO (PROMEDIO)	ID N° 11 <sup>c</sup> RANGO (PROMEDIO)	PRINCIPAL FUENTE <sup>(s)</sup>
Arsénico, ug/l	0.004	10	ND-9.4 (ND)		
Bario, mg/l	2	1	ND-0.1 (ND)		
Cloruro, mg/l	N/A	500.600 <sup>d</sup>	5.2-130 (21)	11-26 (16)	Erosión de depósitos naturales
Cloro (como Cl <sub>2</sub> ), mg/l <sup>e</sup>	MROLG	4.0	ND-3.5 (0.5)	ND-2.0 (0.5)	Erosión de depósitos naturales
Cromo, ug/l <sup>f</sup>	(100)	50	ND-33 (ND)	16-24 (20)	Lixiviación de depósitos naturales
Cromo hexavalente, ug/l <sup>f</sup>	0.02	N/A	ND-23 (8.8)	16-20 (17)	Erosión de depósitos naturales
Cobre, mg/l <sup>g</sup> (Hogares analizados/ sitios que exceden el AL)	0.3	AL = 13	0.11 [51/0]	0.09 [21/0]	Resultado de la cloración del agua potable
Cobre, mg/l	Ninguna	1.0 <sup>h</sup>	ND-0.56 (ND)	ND-0.08 (ND)	Erosión de depósitos naturales
Dibromocloropropano (DBCP), ng/l	1.7	200	ND-60 (ND)	0.17 [22/0]	Erosión de depósitos naturales
Fluor, mg/l	1	2.0	0.1-0.0 (0.6)	0.4-0.7 (0.5)	Lixiviación de tuberías de la vivienda
Actividad de partículas alfa total, pCi/l	(0)	15	ND-15 (ND)	0.4-0.7 (0.5)	Lixiviación de partículas prohibido que puede estar todavía en los suelos
Ácidos halocárticos, ug/l <sup>i</sup>	N/A	60	ND-1.7 (1.8)	ND-6.9 (3.5)	Erosión de depósitos naturales
Dureza (como CaCO <sub>3</sub> ), mg/l	N/A	9.3-310 (120)	68-210 (130)	210-520 (350)	Subproducto de la cloración del agua potable
Nitrato (como nitrógeno), mg/l	10	10	ND-9.0 (1.2)	0.5-1.1 (0.7)	Erosión de depósitos naturales
Olor como umbra, unidades pH, unidades	Ninguno	3 <sup>j</sup>	ND-2.0 (ND)	7.6-8.1 (7.9)	Erosión de depósitos naturales
Sodio, mg/l	N/A	19-130 (32)	67-98 (76)	72-77 (75)	Característica física
Conductancia específica, 1/s/cm	N/A	1,600-2,200 <sup>k</sup>	240-1,100 (390)	530-840 (640)	Sustancias que forman iones cuando están en el agua
Sulfato, mg/l	N/A	500,600 <sup>l</sup>	0.6-270 (150)	150-240 (180)	Lixiviación de depósitos naturales
Bacterias coliformes totales, muestras positivas/fmes	(0)	5% o 1 <sup>m</sup>	ND-1% (ND)	1.5-4.1 (2.8)	Naturalmente presente en el medio ambiente
Total de sólidos disueltos, mg/l	N/A	1,000-1,500 <sup>n</sup>	140-600 (250)	330-560 (420)	Lixiviación de depósitos naturales
Trihalometanos totales, ug/l <sup>o</sup>	N/A	80	ND-18 (16)	11-18 (16)	Subproducto de la cloración del agua potable
Turbidez, NTU	Ninguna	5 <sup>p</sup>	ND-13 (ND)	ND-0.2 (ND)	Lixiviación de depósitos naturales
Urano, pCi/l	0.43	20	ND-13 (4.5)	1.9-41 (13.2)	Erosión de depósitos naturales
CONTROL DE CONTAMINANTES NO REGULADOS DE 2019 <sup>q</sup>					
Clorato, ug/l <sup>r</sup>	N/A	NL=800	ND-52 (ND)		Subproducto de la cloración del agua potable
Clorofluorometano (HFC-22), ug/l <sup>r</sup>		N/A	ND-0.18 (ND)		Refrigerante
1,4-dioxato, ug/l <sup>r</sup>	N/A	NL=1	ND-0.14 (ND)		Lixiviación de vertederos históricos
Molibdeno, ug/l <sup>r</sup>	N/A	NL=19 (8.7)	ND-19 (8.7)		Erosión de depósitos naturales
Estroncio, ug/l <sup>r</sup>	N/A	140-2,000 (420)	4.9-36 (17)		Erosión de depósitos naturales
Vanadio, ug/l <sup>r</sup>	N/A	NL=50			Erosión de depósitos naturales

Este informe contiene información muy importante sobre su agua potable. Tradúcelo o háble con alguien que lo entienda bien. También puede llamar al CVWD al número de teléfono (760) 398-3651 o ir a [www.cwwd.org/ArchiveCenter/ViewFileItem/708](http://www.cwwd.org/ArchiveCenter/ViewFileItem/708).

Nota: La detección anterior compara el resultado del Código de Regulaciones de California con el resultado del Código de Regulaciones de California en la sección 64401.0.

## NOTAS AL PIE

(1) Los valores con estrella (\*) indican que los datos registrados son MCLs primarios a los que se define de acuerdo a la legislación.

(2) Las localidades de Cove Communities incluyen Rancho Magic, Thousand Palms, Palm Desert, Indian Wells, La Quinta, Mecca, Bombay Beach, North Shore, El Mirage, Glamis, Glamis Shores y Agua Calientes, California City, Indio, Banning, Coachella Valley, Thermal y Niland, California.

(3) La DCE o indica las localidades de Indio, HHS, Sly Valley y determinadas áreas de Palm Desert, Hot Springs y otras contiguas.

(4) La "I" indica las localidades de Desert Shores, Salton Sea, Beaumont, Salton City y Niland.

(5) Los valores estimados son los niveles seguidos de contaminantes y se aplican a consumidores a todo plan del consumidor.

(6) El promedio informado representa el promedio anual (promedio) de los datos regulados en ese momento, el promedio y como los datos fueron incluidos en el control de contaminantes 10 regulados de 2019 según la DCEP. El CVWD lleva a cabo el control en determinados niveles de agua potable (consumo directo del PWD) en las comunidades. Resultados del control del control de 0.3-0.7 a 20 ug/l S y resultados en el control del agua no regulada de 0.0-0.1 a 20 ug/l S.

(7) Si los datos regulados en ese momento, el promedio y como los datos fueron incluidos en el control de contaminantes 10 regulados de 2019 según la DCEP. El CVWD lleva a cabo el control en determinados niveles de agua potable (consumo directo del PWD) en las comunidades. Resultados del control del control de 0.3-0.7 a 20 ug/l S y resultados en el control del agua no regulada de 0.0-0.1 a 20 ug/l S.

(8) El MCL de California del ronco hexavalente (Cr6+) en el agua potable fue establecido en 0.01 mg/l para el periodo de julio de 2011 a junio de 2012. Para obtener más información, visite [http://www.watertech.org/documents/standard\\_water\\_level/criteria/documents/standard\\_water\\_level\\_6\\_chromium.pdf](http://www.watertech.org/documents/standard_water_level/criteria/documents/standard_water_level_6_chromium.pdf).

(9) Los valores informados son los niveles de potencial que los niveles totales de los gastos en los hogares de los usuarios del agua.

(10) El promedio informado representa el promedio controlado, más alto que el control (BLA) establecido en el sistema de distribución. La tasa de servicio de 0.3-0.7 a 10 ug/l.

(11) Los sistemas que tienen 40 o más muestras positivas (que representan más de la mitad de las muestras positivas). Los sistemas que tienen menos de 40 muestras positivas (que representan menos de la mitad de las muestras positivas). Los sistemas que tienen menos de 40 muestras positivas (que representan menos de la mitad de las muestras positivas).

(12) Se requiere que todos los sistemas de agua cumplen con la Regla de tratamiento social y la Regla revisada de colesterol total federal. La DCEP anticipa una mayor protección de la salud ya que el nuevo límite es que los sistemas de agua que proveen servicios a las comunidades cumplan con la identidad y solucionen los problemas.

(13) En el 2015, la DCEP revisó el control de contaminantes regulados identificados como MCLs para definir la 26 Comunidades de agua para consumo directo del CVWD en las Comunidades.

(14) Los contaminantes no regulados son aquellos para los que la DCEP y la DCEP no han establecido normas para el agua potable. El propósito del control de contaminantes no regulados es ayudar a los sistemas regulados en la determinación de la duración de control antes de los regulados en el agua potable y de su efecto en la regulación futura.

(15) La detección anterior compara el resultado del Código de Regulaciones de California con el resultado del Código de Regulaciones de California en la sección 64401.0.

(16) I. Inactivación positiva

(17) Se requiere que todos los sistemas de agua cumplen con la Regla de tratamiento social y la Regla revisada de colesterol total federal. La DCEP anticipa una mayor protección de la salud ya que el nuevo límite es que los sistemas de agua que proveen servicios a las comunidades cumplan con la identidad y solucionen los problemas.

(18) Se requiere que todos los sistemas de agua cumplen con la Regla de tratamiento social y la Regla revisada de colesterol total federal. La DCEP anticipa una mayor protección de la salud ya que el nuevo límite es que los sistemas de agua que proveen servicios a las comunidades cumplan con la identidad y solucionen los problemas.

(19) Los contaminantes no regulados son aquellos para los que la DCEP y la DCEP no han establecido normas para el agua potable. El propósito del control de contaminantes no regulados es ayudar a los sistemas regulados en la determinación de la duración de control antes de los regulados en el agua potable y de su efecto en la regulación futura.

## Water quality report options save money and paper

This year, CVWD is offering its Consumer Confidence Report (CCR) also known as the Water Quality Report, online or by request only to save on printing and mailing costs as well as reducing the amount of paper used.

See the options for viewing or obtaining a copy below.

- View a copy of the CCR report online on or after July 1, 2019 at [www.cvwd.org/CCR/2019](http://www.cvwd.org/CCR/2019).
- Request a printed copy by calling (760) 391-9600.  
Note: the printed CCR also includes CVWD's annual report.

Note: Please see Attachment 9 for the full 2019 Spring Issue

### CVWD's Annual Review now available

Coachella Valley Water District (CVWD) has released its Annual Review and Water Quality Report that shows that the drinking water provided to customers meets all current state and federal standards.

The 2018-19 Annual Review is available electronically on the CVWD website. A printed copy also will be mailed to customers upon request and copies will be available in many libraries and city halls. This is a departure from the past practice of printing more than 100,000 copies to send to all CVWD customers.

"By printing fewer copies, we are saving money and resources while still providing this important information to all our customers," said Katie Evans, director of Communications and Conservation. "This is part of CVWD's ongoing commitment to our community through fiscal responsibility, transparency and quality customer service."

A change in state law created the electronic option for providing the Water Quality Report, also called the Consumer Confidence Report (CCR), to customers. CVWD alerted customers to the option of receiving a paper copy through messaging sent through the mail, email and in bills.

This year's Water Quality Report can be viewed on the district's website at [www.cvwd.org/CCR/2019](http://www.cvwd.org/CCR/2019).

The entire Annual Review, which includes articles about district projects in addition to the Water Quality Report is available in English at [www.cvwd.org/annualreview](http://www.cvwd.org/annualreview) and in Spanish at [www.cvwd.org/informeanual](http://www.cvwd.org/informeanual).

If you would like a paper copy of the 2018-19 Annual Review and Consumer Confidence Report mailed to you, please call (760) 391-9600 or email [CustomerService@cvwd.org](mailto:CustomerService@cvwd.org).

Announcement of CCR Availability mailed and emailed on July 2, 2019

### Annual Review & Water Quality Report now available

CVWD's Annual Review & Water Quality Report also known as the Consumer Confidence Report (CCR) is now available online or by mail upon request.

The Water Quality Report shows that water delivered by CVWD meets all current state and federal standards along with other water quality testing details. The 2018-19 Water Quality Report can be viewed online at [cvwd.org/CCR/2019](http://cvwd.org/CCR/2019).

The printed Water Quality Report is part of the district's Annual Review, which includes articles about capital improvement projects completed during the 2018-19 fiscal year. View online in English at [cvwd.org/annualreview](http://cvwd.org/annualreview) or in Spanish at [cvwd.org/informeanual](http://cvwd.org/informeanual).

To request a paper copy of the 2018-19 Annual Review & Water Quality Report, call (760) 391-9600 or email [CustomerService@cvwd.org](mailto:CustomerService@cvwd.org).

Board approves domestic water rate increase, effective July 1  
  
CVWD Board of Directors adopted new water rates on June 13, 2019. The rate increase will increase the average monthly bill for customers by \$1.84 per month, effective July 1, 2019. The increase as proposed by the board followed a public hearing.

Understanding your new water rates  
Domestic water rates are calculated to reflect the true cost of providing water service to more than 104,000 customers.

New water budget rates for volumetric use  
As of July 1, 2019 (reflected on bills beginning on Aug. 1, 2019)

Tiers	Rate Per CCF	Single Family	Multi Family (per unit)	Large-Age Irrigation	Commercial
1	\$1.98	Up to 100%			
2	\$1.39		Up to 100% of water budget		\$1.01 per CCF
3	\$2.50		100% up to 175% of water budget		
4	\$4.01		175% up to 300% of water budget

### A9: Complete 2019 Spring Issue of CVWD's Water News (Page 1 of 2)

#### Did you know?

To date, CVWD and Desert Water Agency's groundwater replenishment programs have replenished about 1.2 trillion gallons of imported water into the aquifer at their groundwater replenishment facilities. This has been possible thanks to entitlements of imported water from the Sacramento Bay Delta, the Colorado River and natural replenishment from local mountain streams.

#### Your water is our promise

Contact us if you have questions or concerns about your water bill. We are here to help answer questions and provide assistance, including on-site conservation visits. Give us a call at (760) 391-9600.

## Study shows increasing groundwater levels in the valley

**A** study of groundwater levels shows significant increases over the past 10 years throughout most of the Coachella Valley.

The study produced two annual reports for the 2017-18 water year, one on the Indio Subbasin and the other on the Mission Creek Subbasin, which make up most of the valley's aquifer.

The Indio Subbasin report shows that over the past ten years there were significant increases in groundwater levels in most of the subbasin in the range of 2-50 feet. These gains highlight the progress towards the long-term sustainable management of the subbasin.

There were localized portions of decreased water levels in the range of 2-8 feet in the mid-valley area. This area will soon benefit from CVWD's Palm Desert Replenishment Facility. Phase one of the project has been completed and phase two planning is underway.

CVWD is also continuing efforts to connect more golf courses to nonpotable water such as recycled or Colorado River water instead of groundwater.

The Indio Subbasin is located under the cities of Palm Springs, Cathedral City, Rancho Mirage, Palm

Desert, Indian Wells, La Quinta, Indio, and Coachella, and the unincorporated communities of Thousand Palms, Thermal, Bermuda Dunes, Oasis, and Mecca.

In addition, the Mission Creek Subbasin report also shows that over the past ten years there were significant increases in groundwater levels in most of the subbasin of up to 285 feet.

There was a localized decrease near the Mission Creek Groundwater Replenishment Facility of 4.3 feet due to expected fluctuating water delivery amounts that occur in any given year but overall the Mission Creek Subbasin shows significant water level increases compared to 10 years ago.

The Mission Creek Subbasin is located underneath the cities of Whitewater, Desert Hot Springs, Palm Springs and Indio Hills.

Maintaining the positive trends observed in groundwater storage in both subbasins during the past 10 years depends on successful Groundwater Replenishment Programs along with continued efforts to conserve, reduce water waste and to connect customers to the nonpotable water system for irrigation purposes.

#### Water quality report options save money and paper

This year, CVWD is offering its Consumer Confidence Report (CCR) also known as the Water Quality Report, online or by request only to save on printing and mailing costs as well as reducing the amount of paper used.

See the options for viewing or obtaining a copy below.

- View a copy of the CCR report online on or after July 1, 2019 at [www.cvwd.org/CCR/2019](http://www.cvwd.org/CCR/2019).
- Request a printed copy by calling (760) 391-9600. Note: the printed CCR also includes CVWD's annual report.

#### Secure payment upgrade coming soon, payment options changing

CVWD is updating its payment system to offer customers the latest security measures available in accordance with the Payment Card Industry (PCI) Security Council.

Starting July 1, customers will no longer have the option to pay their bill or purchase items from CVWD by telephone with a live person. Customers will be directed to a secure automated system where credit card information will be entered by the cardholder.

Customers can still make credit card payments through CVWD's online payment system or through automatic billing free of charge.

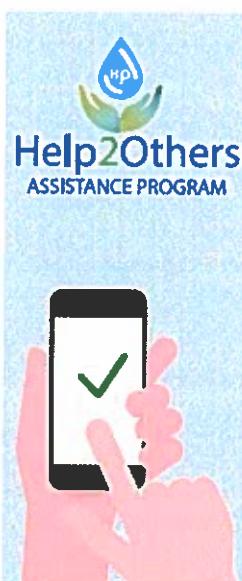

For more information, visit [www.cvwd.org](http://www.cvwd.org) or call 760-391-9600.

#### Permanent water-use restrictions

A partial list of water-use restrictions is listed below:

- ◆ Do not water outdoor landscaping during and within 48 hours after measurable rainfall
- ◆ Do not wash down driveways, patios or sidewalks.
- ◆ Repair broken sprinklers within 24 hours of notification.
- ◆ Use a hose with a shut-off nozzle when washing your vehicle or windows.
- ◆ Fix irrigation systems that cause wasteful water runoff.
- ◆ Do not apply water to hard surfaces such as streets, sidewalks and driveways.

#### Customer assistance program available

Under CVWD's customer assistance program, residential customers who need help paying their water bill can receive a \$100 credit on their water bill once in a 12-month period. Customers must reapply every year.

Eligible customers can apply with United Way of the Desert at (760) 323-2731, ext. 105 or visit [unitedwayofthedesert.org/help2others](http://unitedwayofthedesert.org/help2others).

United Way of the Desert screens eligible customers and provides them with assistance in paying a past-due water bill.

Charitable donations are accepted through United Way. Donations must be made directly to United Way of the Desert. All donations are tax-deductible.

#### Landscape rebates for residents, HOAs & businesses

 CVWD offers rebate programs to help customers improve water efficiency outside their homes and businesses. Here is a list of landscape rebates.

• Residential Landscape Conversion Rebate Program

• Residential Smart Irrigation Controller Program

• Residential Rotary Nozzle Rebate Program

• HOA & Commercial Landscape Conversion Rebate Program

• HOA & Commercial Smart Irrigation Controller Rebate Program

• HOA & Commercial Rotary Nozzle Rebate Program

• HOA & Commercial Irrigation Upgrade Rebate Program

All rebate programs require pre-approval. Apply online at [cvwd.org/rebates](http://cvwd.org/rebates) or pick up an application at CVWD's office (75-525 Hovley Lane East, Palm Desert).

#### Board approves domestic water rate increase, effective July 1

CVWD Board of Directors adopted new water rates on June 11, 2019.

The rate increase will increase the average monthly bill for customers by \$1.84 per month, effective July 1, 2019.

The increase approved by the board followed much discussion among board members

and staff and some public testimony. The final rate was lower than what was recommended by staff who had noted CVWD's upcoming capital improvement program includes important upgrades to infrastructure. Projects include miles of water main that need to be replaced and 64 reservoirs requiring inspections and rehabilitation.

Currently, according to the staff report, the three-year forecast shows a budget shortfall of \$81 million. This is based upon a revenue forecast of \$246 million, and an expense forecast of \$327 million (including \$261 million in operating expense, and \$116 million in capital improvement programs, plus offsets of nonoperating revenues).

To close the gaps, staff outlined three options and recommended one, called Option C, that would have covered the fiscal 2020 and 2021 shortfalls in fiscal 2020 with an 18.5% increase with no rate increase anticipated for fiscal 2021.

The board instead supported the first-year plan outlined in the staff's Option A that eliminates the shortfall for fiscal 2020 but leaves fiscal 2021 up for future deliberation.

For more information, visit [cvwd.org/ratechanges](http://cvwd.org/ratechanges).

#### Understanding your new water rates

Domestic water rates are calculated to reflect the true cost of providing water service to more than 108,000 customers.

##### New water budget rates for volumetric use

As of July 1, 2019 (reflected on bills beginning on Aug. 1, 2019)

Tiers	Rate Per CCF	Single Family	Multi-Family (per unit)	Landscape Irrigation	Commercial
1	\$9.98	Up to 8 CCF		n/a	
2	\$13.37	Up to 100% of water budget		8 CCF per EDU	
3	\$2.55	100% up to 175% of water budget			
4	\$4.83	175% up to 300% of water budget			
5	\$6.34	300% or more of water budget			

##### What is a water budget?

Customers are allocated an efficient amount of water based on each customer's needs. Residential water budgets include an indoor budget and an outdoor budget.

For commercial customers, the indoor water budget is based on the number of equivalent dwelling units (EDUs) assigned to the property by CVWD when the business was established or reassigned.

An EDU is a term used to compare the wastewater flows generated from a commercial business to those generated by a single family residential unit.

##### Fixed rates by meter size

Effective July 1, 2019 (reflected on bills beginning Aug. 1, 2019)

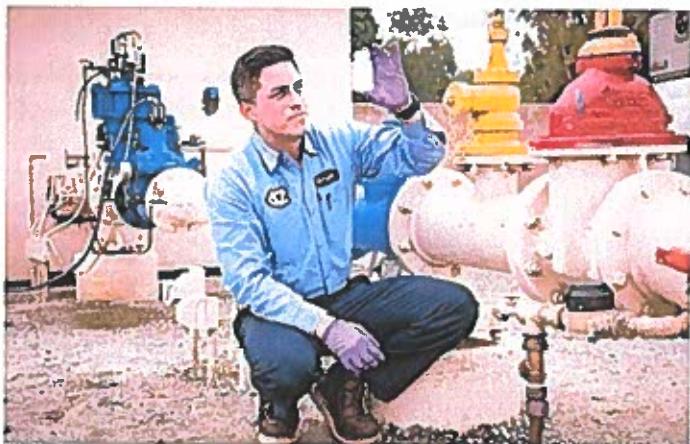

Meter Size	Single Family	Multi-Family	Commercial	Landscape Irrigation
3/4"	\$7.92	\$9.05	\$5.68	\$19.63
1"	\$13.18	\$15.07	\$9.46	\$32.74
1-1/2"	\$26.36	\$30.21	\$18.93	\$65.46

Fixed rates are designed to recover unchanging costs associated with the operation and maintenance of a water system.

#### Highly trained employees monitor and test your water

CVWD is committed to delivering high-quality groundwater from a natural aquifer that lies underneath the valley floor to thousands of local homes and businesses.

Besides groundwater, the aquifer is filled with sand, gravel, and clay sediments. The natural layering of these sediments within the aquifer helps protect groundwater served to Coachella Valley communities.

CVWD's highly trained employees monitor your water system daily and collect more than 15,000 water samples annually rain or shine. Most water samples are tested in our state-certified laboratory, which operates every day to ensure we are delivering safe, high-quality water to our customers.

Water quality testing data is reported to the State of California and is listed in the annual Water Quality Report, which can be viewed at [cvwd.org/CCR/2019](http://cvwd.org/CCR/2019).

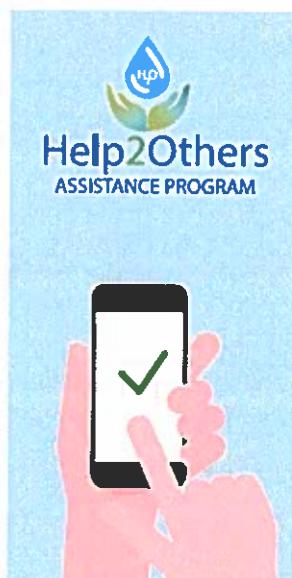

Your water is our promise. Learn more at [cvwd.org/ourpromise](http://cvwd.org/ourpromise).

#### Assistance program helps pay water bills

CVWD's customer assistance program offers eligible residential customers a \$100 credit on their water bill once in a 12-month period. Customers must reapply for subsequent years.

Customers who need help paying their water bill can apply with United Way of the Desert by calling (760) 323-2731.

United Way of the Desert screens eligible customers and provides them with assistance in paying a past due water bill. Charitable donations are also accepted through United Way. Donations must be made directly to United Way of the Desert. All donations are tax-deductible.

#### Annual Review & Water Quality Report now available

CVWD's Annual Review & Water Quality Report also known as the Consumer Confidence Report (CCR) is now available online or by mail upon request.

The Water Quality Report shows that water delivered by CVWD meets all current state and federal standards along with other water quality testing details. The 2018-19 Water Quality Report can be viewed online at [cvwd.org/CCR/2019](http://cvwd.org/CCR/2019).

The printed Water Quality Report is part of the district's Annual Review, which includes articles about capital improvement projects completed during the 2018-19 fiscal year. View online in English at [cvwd.org/annualreview](http://cvwd.org/annualreview) or in Spanish at [cvwd.org/informemanual](http://cvwd.org/informemanual).

To request a paper copy of the 2018-19 Annual Review & Water Quality Report, call (760) 391-9600 or email [CustomerService@cvwd.org](mailto:CustomerService@cvwd.org).
