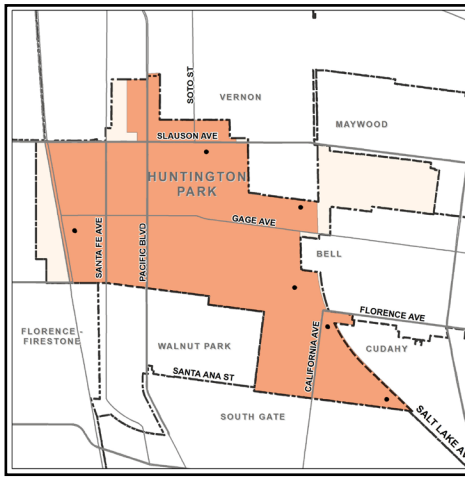
CITY OF HUNTINGTON PARK
2024 CONSUMER CONFIDENCE REPORT

Since 1991, California water utilities have been providing information on water served to its consumers. This report, prepared April 2025, is a snapshot of the tap water quality that we provided last year. Included are details about where your water comes from, how it is tested, what is in it, and how it compares with state and federal limits. We strive to keep you informed about the quality of your water, and to provide a reliable and economic supply that meets all regulatory requirements.



Where Does My Tap Water Come From?

Your tap water comes from 2 sources: groundwater and surface water. We pump groundwater from local, deep wells. We also use Metropolitan Water District of Southern California's (MWD) surface water from both the Colorado River and the State Water Project in northern California. These water sources, located on the adjacent map, supply our service area. The quality of our groundwater and MWD's surface water supplies is presented in this report.

How is My Drinking Water Tested?

Your drinking water is tested regularly for unsafe levels of chemicals, radioactivity and bacteria at the source and in the distribution system. We test weekly, monthly, quarterly, annually or less often depending on the substance. State and federal laws allow us to test some substances less than once per year because their levels do not change frequently. All water quality tests are conducted by specially trained technicians in state-certified laboratories.

What Are Drinking Water Standards?

The U.S Environmental Protection Agency (USEPA) limits the amount of certain substances allowed in tap water. In California, the State Water Resources Control Board (State Water Board) regulates tap water quality by enforcing limits that are at least as stringent as the Federal EPA's. Historically, California limits are more stringent than the Federal ones.

There are two types of these limits, known as standards. Primary standards protect you from substances that could potentially affect your health. Secondary standards regulate substances that affect the aesthetic qualities of water. Regulations set a Maximum Contaminant Level (MCL) for each of the primary and secondary standards. The MCL is the highest level of a substance that is allowed in your drinking water.

Public Health Goals (PHGs) are set by the California Environmental Protection Agency. PHGs provide more information on the quality of drinking water to customers, and are similar to their federal counterparts, Maximum Contaminant Level Goals (MCLGs). PHGs and MCLGs are advisory levels that are nonenforceable. Both PHGs and MCLGs are concentrations of a substance below which there are no known or expected health risks.

How Do I Read the Water Quality Table?

Although we test for over 100 substances, regulations require us to report only those found in your water. The first column of the water quality table lists substances detected in your water. The next columns list the average concentration and range of concentrations found in your drinking water. Following are columns that list the MCL and PHG or MCLG, if appropriate. The last column describes the likely sources of these substances in drinking water.

To review the quality of your drinking water, compare the highest concentration and the MCL. Check for substances greater than the MCL. Exceedence of a primary MCL does not usually constitute an immediate health threat. Rather, it requires testing the source water more frequently for a short duration. If test results show that the water continues to exceed the MCL, the water must be treated to remove the substance, or the source must be removed from service.

Why Do I See So Much Coverage in the News About the Quality Of Tap Water?

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, including viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming;
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can

also come from gas stations, urban stormwater runoff, agricultural application, and septic systems;

- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (U.S. EPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791). You can also get more information on tap water by logging on to these helpful web sites:

- **https://www.epa.gov/ground-water-and-drinking-water/safe-drinking-water-information**
  (USEPA's web site)

- **http://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Chemicalcontaminants.html**
  (State Board web site)

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. The **City of Huntington Park** is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact **The City of Huntington Park** at **323-584-5274**. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at https://www.epa.gov/safewater/lead.

Should I Take Additional Precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The USEPA/Centers for Disease Control guidelines on appropriate means to lessen the risk of infection of *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Source Water Assessment

MWD completed an assessment of its Colorado River and State Water Project supplies in 2002. Colorado River supplies are considered most vulnerable to recreation, urban/storm water runoff, increasing urbanization in the watershed, and wastewater. State Water Project supplies are considered most vulnerable to urban/storm water runoff, wildlife, agriculture, recreation and wastewater. A copy of the assessment can be obtained by contacting MWD at (213) 217-6850.

The City of Huntington Park conducted an assessment of its groundwater supplies in 2004. Groundwater supplies are considered most vulnerable to sewer collection systems, automobile gas stations, and contractor or government agency equipment storage yards. Customers may request a copy of the Source Water Assessment by mailing request to the City of Huntington Park: 6900 Bissell Street, Huntington Park, CA 90255

How Can I Participate in Decisions On Water Issues That Affect Me?

The public is welcome to attend City Council meetings the first and third Monday of each month at 6:00 p.m. at Huntington Park City Hall/ City Council Chambers, 6550 Miles Avenue, Huntington Park, CA 90255.

How Do I Contact My Water Agency If I Have Any Questions About Water Quality?

If you have specific questions about your tap water quality, please contact Mr. Gerardo Lopez, Public Works Director at (323) 584-6274 or glopez@hpca.gov.

Some Helpful Water Conservation Tips

- Fix leaky faucets in your home – save up to 20 gallons every day for every leak stopped
- Adjust your sprinklers so that water lands on your lawn/garden, not the sidewalk/driveway – save 500 gallons per month
- Use organic mulch around plants to reduce evaporation – save hundreds of gallons a year
- Visit http://www.bewaterwise.com for more information.

Visit us on the web at: www.hpca.gov

CITY OF HUNTINGTON PARK
2024 CONSUMER CONFIDENCE REPORT

Results are from the most recent testing performed in accordance with state and federal drinking water regulations
The State allows monitoring for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.
Some of the data, though representative, are more than one year old.

PRIMARY STANDARDS MONITORED AT THE SOURCE-MANDATED FOR PUBLIC HEALTH

ORGANIC CHEMICALS (µg/l)	GROUNDWATER AVERAGE	GROUNDWATER RANGE	MWD'S SURFACE WATER AVERAGE	MWD'S SURFACE WATER RANGE	PRIMARY MCL	MCLG or PHG	VIOLATION OCCURRED	MAJOR SOURCES IN DRINKING WATER
Tetrachloroethylene (PCE)	0.11	ND - 0.63	ND	ND	5	0.06 **(a)**	No	Discharge from factories, dry cleaners, and auto shops (metal degreaser). Some people who use water containing tetrachloroethylene in excess of the MCL over many years may experience liver problems, and may have an increased risk of getting cancer. The City has taken action using an appropriate treatment technique (TT). Water after treatment is in compliance and below the MCL.
Trichloroethylene (TCE) **(m)**	ND	ND	ND	ND	5	1.7 **(a)**	No	Discharge from metal degreasing sites and other factories. Some people who use water containing trichloroethylene in excess of the MCL over many years may experience liver problems and may have an increased risk of getting cancer.
INORGANICS Sampled from 2022 to 2024 (b)								
Aluminum (mg/l)	0.01	ND - 0.034	0.05	ND - 0.15	1	0.6 (a)	No	Erosion of natural deposits; residue from surface water treatment processes
Arsenic (µg/l)	1.5	ND - 2.7	ND	ND	10	0.004 (a)	No	Erosion of natural deposits; glass/electronics production wastes; runoff
Barium (mg/l)	0.1	0.096 - 0.140	0.124	ND	1	2 (a)	No	Oil drilling waste and metal refinery discharge; erosion of natural deposits
Chromium (ug/l)	0.7	ND - 2.3	ND	ND	50	100	No	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits.
Hexavalent Chromium (ug/l) **(l)**	0.8	0.06 - 1.5	ND	ND	10	0.02	No	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.
Fluoride (mg/l) (c)	0.34	0.29 - 0.37	0.70	0.3 - 0.8	2.0	1 (a)	No	Erosion of natural deposits, water additive that promotes strong teeth, discharge from fertilizer and aluminum factories.
Nitrate (mg/l as N)	0.52	ND - 0.93	ND	ND	10	10	No	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage, erosion of natural deposits.
Selenium (ug/l)	1.52	ND - 4.8	ND	ND	50	30	No	Discharge from petroleum, glass, and metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; runoff from livestock lots (feed additive)
RADIOLOGICAL - (pCi/l) (Sampled from 2019 - 2024) (b)								
Gross Alpha	ND	ND	ND	ND - 5.0	15	0	No	Erosion of natural deposits
Gross Beta	NA	NA	2	ND - 5.0	50	0	No	Decay of natural and man-made deposits
Radium 226	ND	ND	ND	ND	5 **(d)**	0.05	No	Erosion of natural deposits
Radium 228	0.24	ND - 1.2	ND	ND		0.019	No	Erosion of natural deposits
Uranium	2.02	ND - 3.3	0.5	ND - 3.0	20	0.43 (a)	No	Erosion of natural deposits

PRIMARY STANDARDS MONITORED IN THE DISTRIBUTION SYSTEM - MANDATED FOR PUBLIC HEALTH

MICROBIALS	DISTRIBUTION SYSTEM AVERAGE # POSITIVE	DISTRIBUTION SYSTEM RANGE OF # POSITIVE	PRIMARY MCL	MCLG or PHG	VIOLATION OCCURRED	
Total Coliform Bacteria	0	0	>1 positive	0	No	Naturally present in the environment.
Fecal Coliform and *E.Coli* Bacteria	0	0	0	0	No	Human and animal fecal waste
No. of Acute Violations	0	0	-	-	No	

	DISTRIBUTION SYSTEM AVERAGE	DISTRIBUTION SYSTEM RANGE				
Turbidity (NTU)	0.1	<0.1 - 0.7	TT	-		Soil runoff

DISINFECTION BY-PRODUCTS (e) AND DISINFECTION RESIDUALS *Data collected/sampled in 2024*	DISTRIBUTION SYSTEM HIGHEST RUNNING ANNUAL AVERAGE	DISTRIBUTION SYSTEM RANGE	PRIMARY MCL	MCLG or PHG	VIOLATION OCCURRED	
Trihalomethanes-TTHMS (µg/l)	29.6	0.0 - 43.1	80	-	No	By-product of drinking water disinfection.
Haloacetic Acids (µg/l)	8.3	0.0 - 8.0	60	-	No	By-product of drinking water disinfection.
Total Chlorine Residual (mg/l)	1.8	0.7 - 3.0	4.0 (f)	4.0 (g)	No	Drinking water disinfectant added for treatment

AT THE TAP PHYSICAL CONSTITUENTS 30 sites sampled in 2022	DISTRIBUTION SYSTEM 90th PERCENTILE	NUMBER OF SITES ABOVE THE AL	ACTION LEVEL AL	MCLG or PHG	VIOLATION OCCURRED	
Copper (mg/l)	0.11 (h)	0	1.3 AL	0.3 (a)	No	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Lead (µg/l)	0 (h)	0	15 AL	0.2 (a)	No	Internal corrosion of household water plumbing systems, discharges from industrial manufacturers; erosion of natural deposits

SECONDARY STANDARDS MONITORED AT THE SOURCE-FOR AESTHETIC PURPOSES

Sampled from 2022 to 2024 (b)	GROUNDWATER		MWD'S SURFACE WATER		SECONDARY	MCLG	VIOLATION	
	AVERAGE	RANGE	AVERAGE	RANGE	MCL	or PHG	OCCURRED	
Aggressiveness Index (corrosivity)	12.2	11.7 - 12.4	12.5	12.4 - 12.6	Non-corrosive	-	No	Natural/industrially-influenced balance of hydrogen/carbon/oxygen in water
Aluminum (µg/l) (i)	6.8	ND - 34	46.5	ND - 150	200	600 (a)	No	Erosion of natural deposits, surface water treatment process residue
Chloride (mg/l)	41.2	36 - 46	105	96 - 116	500	-	No	Runoff/leaching from natural deposits, seawater influence
Color (color units)	2	ND - 10	1.5	1.0 - 2.0	15	-	No	Naturally-occurring organic materials
Specific Conductance (uS/cm)	604	580 - 620	987.5	888 - 1080	1,600	-	No	Substances that form ions when in water, seawater influence
Iron (ug/l)	ND	ND	ND	ND	300	-	No	Leaching from natural deposits
Manganese (µg/l)	36.1	2.5 - 100	ND	ND	50	-	No	Leaching from natural deposits
Odor (threshold odor number)	ND	ND	0.5	ND - 1.0	3	-	No	Naturally-occurring organic materials.
Sulfate (mg/l)	92.6	87 - 99	224.5	196 - 253	500	-	No	Runoff/leaching from natural deposits, industrial wastes
Total Dissolved Solids (mg/l)	374	360 - 380	626.5	556 - 690	1,000	-	No	Runoff/leaching from natural deposits
Turbidity (NTU)	0.55	0.1 - 2.3	ND	ND	5	-	No	Soil runoff

SECONDARY STANDARDS MONITORED IN THE DISTRIBUTION SYSTEM-FOR AESTHETIC PURPOSES

GENERAL PHYSICAL CONSTITUENTS	DISTRIBUTION SYSTEM		SECONDARY	MCLG	VIOLATION	
	AVERAGE	RANGE	MCL	or PHG	OCCURRED	
Color (color units)	<3.0	<3 - 15.0	15	-	No	Naturally-occurring organic materials
Odor (threshold odor number)	1	1.0 - 2.0	3	-	No	Naturally-occurring organic materials

ADDITIONAL CHEMICALS OF INTEREST

FOOTNOTES

(a) California Public Health Goal (PHG). Other advisory levels listed in this column are federal Maximum Contaminant Level Goals (MCLGs).

(b) Indicates dates sampled for groundwater sources only.

(c) Starting June 1, 2015, the fluoride levels at the treatment plants were adjusted to achieve an optimal fluoride level of 0.7 ppm and a control range of 0.6 ppm to 1.2 ppm to comply with the existing State's Water Fluoridation Standards. Metropolitan (MWD) was in compliance with all provisions of the State's Fluroidation System Requirements.

(d) Combined Radium 226 + Radium 228 has a Maximum Contaminant Level (MCL) of 5 pCi/L.

(e) Running annual average used to calculate average, range, and MCL compliance.

(f) Maximum Residual Disinfectant Level (MRDL)

(g) Maximum Residual Disinfectant Level Goal (MRDLG)

(h) 90th percentile from the most recent sampling at selected customer taps.

(i) Aluminum has primary and secondary standards.

(j) The Notification Level of 1 ug/l for 1,4-Dioxane was exceeded in two wells in 2024. Some people who use water containing 1,4-dioxane in excess of the Notification Level over many years may experience liver or kidney problems and may have an increased risk of getting cancer, based on studies in laboratory animals.

(k) Over 50 regulated and unregulated organic chemicals were analyzed. None were detected at or above the reporting limit in groundwater or surface water sources.

(l) Hexavalent Chromium (CR-6) was detected in two wells in 2024. Pursuant to the Detection Limits for Purposes of Reporting (DLRs), the DLR for Hexavalent Chromium is 0.0001 mg/L or 0.1 ug/L. The City of Huntington Park monitors for Hexavalent Chromium and has not exceeded the annual running average of 10 ug/l.

(m) One of the wells in this system has detections of Trichloroethylene (TCE) below the MCL. In 2024, a treatment system using filtration was installed to remove Trichloroethylene prior to distribution. The data located on the water quality table is representative from the distribution system in 2024. Water after treatment is in compliance and below the MCL and the well system monitors samples monthly for TCE.

(n) PFAS are a group of synthetic chemicals used in a wide range of consumer products and industrial applications including: non-stick cookware, water-repellent clothing, stain-resistant fabrics and carpets, cosmetics, firefighting foams, electroplating, and products that resist grease, water, and oil. PFAS are found in the blood of people and animals and in water, air, fish, and soil at locations across the United States and the world.

VIOLATION NOTIFICATION : FAILURE TO MONITOR AS REQUIRED FOR DRINKING WATER STANDARDS DURING THE PAST YEAR

Huntington Park is required to monitor your drinking water for specific contaminants on a regular basis in accordance with Permit Amendment 1910049PA-003, condition 27. On October 16, 2024, our water system missed the collection of a required weekly monitoring sample for Trichloroethylene (TCE) from three sample points of the Treatment Plant (influent, lead effluent, and plant effluent) therefore, we cannot be sure of the quality of our drinking water during that time.

What Happened: Huntington Park missed a weekly sample for Trichloroethylene (TCE) that was to have been taken 10/16/2024.

What was done: We have since taken the required samples. Regularly scheduled weekly monitoring resumed the following week on 10/23/2024 and the results for sample point lead effluent and the plant effluent came back None-Detect.

Notification of PFOA/PFOS: PFOA and PFOS are manmade fluorinated organic chemicals that are part of a larger group of chemicals referred to as per- and poly-fluoroalkyl substances (PFASs). These substances have been synthesized for water and lipid resistance and have been used extensively in consumer products such as carpets, clothing, fabrics for furniture, paper packaging for food, and other materials (e.g., cookware) designed to be waterproof, stain-resistant or non-stick. In addition, they have been used in fire-retarding foam and various industrial processes. The U.S. EPA has not established enforceable drinking water standards, called maximum contaminant levels, for these chemicals.

In May 2016, the United States Environmental Protection Agency (U.S. EPA) issued a lifetime health advisory for PFOS and PFOA for drinking water, advising municipalities that they should notify their customers of the presence of levels over 70 parts per trillion (PPT) or nanograms per liter (NG/) in community water supplies. In August 2019, State Water Resources Control Board, Division of Drinking Water (DDW), revised the notification levels to 6.5 ppt for PFOS and 5.1 ppt for PFOA. The single health advisory response level (for the combined values of PFOS and PFOA) remained at 70 ppt. Perfluorobutane sulfonic acid [PFBS] has a notification level of 500 ng/L (ppt). PFHxS - Perfluorohexane Sulfonic Acid is part of the group of Perfluorochemicals (PFCs). On February 6, 2020, DDW issued updated drinking water response levels of 10 ppt for PFOA and 40 ppt for PFOS based on a running four-quarter average. Exposure to PFOA and PFOS over certain levels may result in adverse health effects, including developmental effects to fetuses during pregnancy or to breastfed infants (e.g., low birth weight, accelerated puberty, skeletal variations), cancer (e.g., testicular, kidney), liver effects (e.g., tissue damage), immune effects (e.g., antibody production and immunity), thyroid effects and other effects (e.g., cholesterol changes). PFHxS - Perfluorohexane Sulfonic Acid is part of the group of Perfluorochemicals (PFCs). PFHxS, PFOS and PFOA share similar chemical strucutre and uses (i.e, surface treatment agents for textiles, paper, and furniture etc. for its excellent waterproofing and oil-resistance performance). PFHxS have been detected in endangered species and the human blood of the general population and the response level for PFHxS is 20 ng/L. For information on PFOA, PFOS, and other PFAS, including possible health outcomes, you may visit these websites: https://www.epa.gov/pfas.

ABBREVIATIONS

< = less than
NA = constituent not analyzed
uS/cm = microSiemens per centimeter
SI = saturation index
pCi/l = picoCuries per liter
NTU = nephelometric turbidity units
ND = constituent not detectable at testing limit
mg/l = milligrams per liter or parts per million (equivalent to 1 drop in 42 gallons)
µg/l = micrograms per liter or parts per billion (equivalent to 1 drop in 42,000 gallons)
ng/l = nanograms per liter or parts per trillion (equivalent to 1 drop in 42,000,000 gallons)

DEFINITIONS

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectant to control microbial contaminants.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Primary Drinking Water Standards (PDWS): MCLs, MRDLs and treatment techniques (TTs) for contaminants that affect health, along with their monitoring and reporting requirements.

Secondary Drinking Water Standards (SDWS): MCLs and MRDLs for contaminants that affect the aesthetic qualities (taste, odor, or appearance) of drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Variances & Exemptions: State Water Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

UNREGULATED CONTAMINANT MONITORING REGULATION (UCMR-5)

The Safe Drinking Water Act requires the Environmental Protection Agency (EPA) to identify unregulated contaminants for potential regulations. Every five years, EPA identifies a list of unregulated contaminants to be monitored for by the nation's water utilities over a three year period. This is occurring in 2023-2025 with the fifth UCMR (UCMR-5). **In 2024, the City of Huntington Park monitored for a total of 30 chemical contaminants from its wells along with a corresponding sampling from the distribution system reflecting water from each well**. Once EPA has obtained this occurrence data nationally, they are required to determine if there is a meaningful opportunity for increased health protection of drinking water by regulating these contaminants. The findings from this monitoring are reported in this year's Consumer Confidence Report.

FIFTH UNREGULATED CONTAMINANT MONITORING REGULATION (UCMR 5)

Monitored in 2024 CHEMICALS PARAMETERS	AVERAGE ug/l	RANGE ug/l	Minimum Reporting Level (ug/l)	USE OR ENVIRONMENTAL SOURCE
perfluorohexanesulfonic acid (PFHxS)	0.0006	ND - 0.0043	0.003	PFAS are a group of synthetic chemicals used in a wide range of consumer products and industrial applications including: non-stick cookware, water-repellent clothing, stain-resistant fabrics and carpets, cosmetics, firefighting foams, electroplating, and products that resist grease, water, and oil. PFAS are found in the blood of people and animals and in water, air, fish, and soil at locations across the United States and the world.
perfluorooctanoic acid (PFOA)	0.0006	ND - 0.0044	0.004

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

The following two sentences are in Spanish relaying information on the importance of this notice. Translated to English, it would read as follows: [This notice contains important information regarding your drinking water, please read the Spanish notice if it is included. If the Spanish notice is not included, please contact the water system and ask for a copy.]

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

MONITORING REQUIREMENTS NOT MET FOR CITY OF HUNTINGTON PARK

Our water system failed to monitor as required for drinking water standards during the past year and, therefore, was in violation of the regulations. Even though this failure was not an emergency, as our customers, you have a right to know what you should do, what happened, and what we did to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During October 2024, our water system failed to monitor in accordance with Permit Amendment 1910049PA-003, condition 27. On 10/16/2024 we missed to collect the required weekly monitoring sample for Trichloroethylene (TCE) from three sample points of the Well 15 GAC Treatment Plant, those being the influent, lead effluent, and plant effluent. Therefore, we cannot be sure of the quality of our drinking water during that time period.

What should I do?

- There is nothing you need to do at this time.
- The table below lists the contaminant(s) we did not properly test for during the last year, how many samples we are required to take and how often, how many samples we took, when samples should have been taken, and the date on which follow-up samples were (or will be) taken.

Contaminant	Required Sampling Frequency	Number of Samples Taken	When All Samples Should Have Been Taken	When Samples Were or Will Be Taken
Trichloroethylene (TCE)	One sample every week	0	10/16/2024	10/23/2024

- If you have health issues concerning the consumption of this water, you may wish to consult your doctor.

What happened? What is being done?

We have since taken the required samples as described in the last column of the table above. The samples showed we are meeting drinking water standards.

Regularly scheduled weekly monitoring resumed the following week on (10/23/2024) and the results for sample points lead effluent and the plant effluent came back None-Detect.

For more information, please contact Mr. Gerardo Lopez by phone at (323) 584-6274 or by mail at 6900 Bissell Street, Huntington Park, CA 90255.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this public notice in a public place or distributing copies by hand or mail.

Secondary Notification Requirements

Upon receipt of notification from a person operating a public water system, the following notification must be given within 10 days [Health and Safety Code Section 116450(g)]:

- SCHOOLS: Must notify school employees, students, and parents (if the students are minors).
- RESIDENTIAL RENTAL PROPERTY OWNERS OR MANAGERS (including nursing homes and care facilities): Must notify tenants.
- BUSINESS PROPERTY OWNERS, MANAGERS, OR OPERATORS: Must notify employees of businesses located on the property.

This notice is being sent to you by City of Huntington Park Water System.

State Water System ID#: CA1910049

Date distributed: 06/30/2025

CIUDAD DE HUNTINGTON PARK
INFORME DE CONFIANZA DE CONSUMIDOR de 2024

Desde 1991, las agencias proveedoras de recursos hidráulicos de California han emitido información sobre el agua que se provee al consumidor. Este informe, preparado en abril de 2025, es una instantánea de la calidad del agua del grifo que proporcionamos el año pasado. Incluímos detalles sobre el origen del agua que toma, cómo se analiza, que contiene, y cómo se compara con los límites estatales y federales. Nos esforzamos por mantenerle informado sobre la calidad de su agua, y proveerle un abastecimiento confiable y económico que cumpla con todos los requisitios**.**

¿De Dónde Proviene el Agua que Tomo?
Su agua de la llave proviene de 2 fuentes: de las aguas naturales (subterránea) y de aguas superficiales (de los ríos). Bombeamos aguas naturales de profundos pozos locales. También usamos agua superficial de la agencia Metropolitan Water District del Sur de California (MWD) importada del Río Colorado y del proyecto State Water Project del Norte de California. Estas fuentes de agua, que se encuentra en el mapa al lado, el suministro de nuestra área de servicio. Este reporte informa sobre la calidad de nuestra agua subterranea y el abastecimiento del agua superficial del MWD.

¿Cómo Se Analiza Mi Agua Potable?
El agua que toma se analiza regularmente para asegurarnos de que no halla niveles altos de sustancias químicas, de radioactividad o de bacteria en el sistema de distribución y en las tomas de servicios. Estos análisis se llevan a cabo semanal, mensual, trimestral, y anualmente o con más frecuencia, dependiendo de la sustancia analizada. Bajo las leyes estatales y federales, se nos permite analizar algunas sustancias menos frecuentemente que los periodos anuales porque los resultados no cambian.

¿Cuales Son Los Estándares del Agua Potable?
La Agencia federal de Proteción al Medio Ambiente (USEPA) impone los límites de las cantidades de ciertos contaminantes en el agua potable. En California, la Junta de Control de Recursos Hídricos del Estado (State Water Board) regula la calidad del agua de beber siguiendo normas que sean al menos tan estrictas como las normas federales. Historicamente, los estandares de California han sido más estrictos que los federales.

Hay dos tipos de límites conocidos como estándares. Los estándares primarios lo protegen de sustancias que potencialmente podrían afectar su salud. Las normas establecen los Niveles Contaminantes Máximos (MCL, en inglés) que se permite del contaminante primario o secundario en el agua de beber. Los abastecedores de agua deben asegurarse de que la calidad de esta cumpla con los Niveles Contaminantes Máximos (o MCLs, en inglés). No todas las sustancias tienen un Nivel Contaminante Máximo. El plomo y el cobre, por ejemplo, son regulados, por cierto nivel de acción. Si cualquier sustancia química sobrepasa el nivel de acción, se dará la necesidad de un proceso de tratamiento para rebajar los niveles en el agua de beber. Los abastecedores de agua deben cumplir con los Niveles Contaminantes Máximos para asegurar la calidad del agua.

Las Metas para la Salud Pública (MSP [o PHGs, en inglés]) son establecidas por la agencia estatal de California-EPA. Las PHGs proveen más información con respecto a la calidad del agua, y son similares a los reglamentos federales nombrados Metas para Los Niveles de Contaminante *Maximos* (MNCM [o MCLGs, en inglés]). Las PHGs y MCLGs son metas a nivel recomendable. Las PHG y MCLG son ambas definidas como los niveles de contaminantes en el agua potable por debajo de los niveles donde no se esperan riesgos a la salud y no enforzables. Ambos niveles PHG y MCLG son concentraciones de una sustancia en las que no hay riesgos a la salud aún conocidos.

¿Cómo Interpreto Mi Informe de Calidad del Agua?
Aunque analizamos más de 100 sustancias, las normas nos requireren que reportemos solo aquellas que se encuentran en el agua. La primer columna en la tabla de la calidad de agua muestra la lista de las sustancias detectadas en el agua. La siguiente columna muestra la lista de la concentracion promedio y el rango de concentraciones que se hallan encontrado en el agua que usted toma. En seguida están las listas de el MCL, el PHG y el MCLG, si estos son apropiados. La última columna describe las probables fuentes u origen de las sustancias detectadas en el agua potable.

Para revisar la calidad de su agua de beber, compare los valores por encima del promedio, mínimos y máximos y el Nivel Contaminante Máximo. Revise todos los químicos que se encuentran por encima del Nivel Contaminante Máximo. Si los químicos sobrepasan el Nivel Contaminante Máximo no significa que sea detrimental a la salud de inmediato. Más bien, se requiere que se realizen análisis más frecuentemente en el abastecimiento del agua por un corto período. Si los resultados muestran sobrepasar el MCL, el agua debe ser tratada para remover esa sustancia, o el abastecimiento de esta debe decomisionarse.

¿Por Qué Hay Tanta Publicidad Sobre La Calidad Del Agua Potable?
Las fuentes del agua potable (de ambas agua de la llave y agua embotellada) incluye ríos, lagos, arroyos, lagunas, embalses, manantiales, y pozos. Al pasar el agua por la superficie de los suelos o por la tierra, se disuelven minerales que ocurren al natural, y en algunas ocasiones, material radioactivo, al igual que pueden levantar sustancias generadas por la presencia de animales o por actividades humanas.

Entre los contaminantes que puenden existir en las fuentes de agua se incluyen:

- Contaminantes microbiales como los viruses y la bacteria, los que pueden venir de las plantas de tratamiento de aguas negras, de los sistemas sépticos, de las operaciones de ganadería, y de la vida salvaje;

- Contaminantes inorgánicos, como las sales y los metales, los cuales pueden ocurrir naturalmente o como resultado del desagüe pluvial, industrial, o de alcantarillado, producción de gas natural y petróleo, minas y agricultura.

- Pesticidas y herbicidas, los cuales pueden venir de varias fuentes tales como la agricultura, del desagüe pluvial, y de usos residenciales;

- Contaminantes de otras sustancias químicas orgánicas, incluyendo químicos orgánicos volátiles y sintéticos que son productos de procesos industriales y de la producción de petróleo, y que pueden provenir de las estaciones de

gasolina, desagües pluviales urbanos, y agricultura application y de sistemas sépticos;

- Contaminantes radioactivos, los cuales puenden ocurrir naturalmente o que puenden ser resultados de las actividades de la producción de gas natural y minería.

Para garantizar que el agua del grifo sea segura para beber, la Agencia de Protección Ambiental de EE. UU. (U.S. EPA) y la Junta Estatal de Control de Recursos Hídricos (Junta Estatal) prescriben normas que limitan la cantidad de ciertos contaminantes en el agua proporcionada por los sistemas públicos de agua. Las regulaciones de la Administración de Alimentos y Medicamentos de Estados Unidos y la ley de California también establecen límites para los contaminantes en el agua embotellada que brindan la misma protección para la salud pública.

Toda el agua potable, incluyendo el agua embotellada, puede contener cantidades pequeñas de ciertos contaminantes. La presencia de contaminantes no necesariamente indica que haya algún riesgo de salud. Para más información acerca de contaminantes y riesgos a la salud favor de llamar a la USEPA encargada de proteger el agua potable al teléfono (1-800-426-4791). Usted puede obtener más información sobre el agua potable al conectarse al Internet en los siguientes domicilios:

- **https://www.epa.gov/ground-water-and-drinking-water/safe-drinking-water-information**
  (el sitio Web del USEPA)

- **http://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Chemicalcontaminants.html**
  (sitio Web de Bordo Estatal)

El plomo puede causar efectos graves en la salud de personas de todas las edades, especialmente en personas embarazadas, bebés (tanto alimentados con fórmula como amamantados) y niños pequeños. El plomo en el agua potable proviene principalmente de materiales y partes utilizados en las líneas de servicio y en la plomería del hogar. La Ciudad de **Huntington Park** es responsable de proporcionar agua potable de alta calidad y eliminar las tuberías de plomo, pero no puede controlar la variedad de materiales utilizados en la plomería de su hogar. Debido a que los niveles de plomo pueden variar con el tiempo, la exposición al plomo es posible incluso cuando los resultados de muestreo de su grifo no detectan plomo en un momento dado. Puede ayudar a protegerse a sí mismo y a su familia identificando y eliminando materiales con plomo dentro de la plomería de su hogar y tomando medidas para reducir el riesgo de su familia. Usar un filtro, certificado por un certificador acreditado por el American National Standards Institute para reducir el plomo, es efectivo para reducir las exposiciones al plomo. Siga las instrucciones proporcionadas con el filtro para garantizar que se utilice correctamente. Use solo agua fría para beber, cocinar y preparar fórmula para bebés. Hervir el agua no elimina el plomo del agua. Antes de usar agua del grifo para beber, cocinar o preparar fórmula para bebés, enjuague sus tuberías durante varios minutos. Puede hacer esto abriendo el grifo, tomando una ducha, lavando ropa o lavando platos. Si tiene una línea de servicio de plomo o una línea de servicio galvanizada que requiere reemplazo, es posible que deba enjuagar sus tuberías por un período más largo. Si le preocupa el plomo en su agua y desea que la prueben, comuníquese con **Huntington Park al (323) 584-6274**. Información sobre el plomo en el agua potable, métodos de prueba y pasos que puede seguir para minimizar la exposición está disponible en https://www.epa.gov/safewater/lead.

¿Debería Tomar Otras Precauciones?

Algunas personas pueden ser más vulnerables a los contaminantes en el agua potable que el público en general. Las personas que tienen problemas imunológicos, o sea esas personas que estén en tratamiento por medio de quimoterapia cancerosa; personas que tienen órganos transplantados, o personas con SIDA o desordenes imunológicos, personas de edad avanzada, y los bebés que son particularmente suseptibles a ciertas infecciones. Estas personas deben de consultar a sus proveedores de salud médica. Las pautas de la USEPA/Centros para el Control de Enfermedades sobre los medios apropiados para disminuir el riesgo de infección por Cryptosporidium y otros contaminantes microbianos están disponibles en la línea directa de agua potable segura (1-800-426-4791).

Valoración de su Abastecimiento de Agua

El distrito Metropolitano de agua del Sur de California completo una valoración de su abastecimiento del Río Colorado y del Proyecto de Agua del Estado en el 2002. El abastecimiento del Río Colorado es considerado más vulnerable a la recreación, al agua que corre de la ciudad después de una tormenta, a la creciente urbanización en la cuenca, y aguas residuales. El Proyecto de abastecimiento de agua del Estado es considerado más vulnerable al agua que corre de la ciudad después de una tormenta, a la fauna, la agricultura, la recreación, y aguas residuales. Téléphone el distrito Metropolitano de agua del Sur de California para un copie de una valoración al (213) 217-6850.

La ciudad de Huntington Park condujo una valoración de su abastecimiento de aguas subterráneas en el 2004. El abastecimientote aguas subterráneas es considerado mas vulnerable a sistemas de colección de alcantarillados; a estaciones de gasolina; y a lugares de almacenaje para agencias de gobierno y contratistas. Los clientes pueden solicitar una copia de la Evaluación de fuentes de agua enviando una solicitud por correo a la ciudad de Huntington Park: 6900 Bissell Street, Huntington Park, CA 90255.

Cómo Puedo Participar en las Decisiones Sobre Asuntos Acerca del Agua Que Me Puedan Afectar ?

El público puede asistir a las reuniones del Concejo Municipal el primer y tercer lunes de cada mes a las 6:00 p. m. en el Ayuntamiento de Huntington Park/Cámaras del Concejo Municipal, 6550 Miles Avenue, Huntington Park, CA 90255.

¿Cómo Me Pongo En Contacto Con Mi Agencia del Agua Si Tengo Preguntas Sobre La Calidad Del Agua?

Si tiene preguntas específicas sobre la calidad del agua del grifo, comuníquese con el Sr. Gerardo López, Director de Obras Públicas, al (323) 584-6274 o glopez@hpca.gov.

Algunas extremidades provechosas de la conservación del agua

- arreglar los grifos que gotean en su hogar - excepto hasta 20 galones cada día por cada detenido de fugas
- Ajuste sus regaderas de modo que el agua caiga en su césped / jardín, no la acera / calzada - excepto 500 galones por mes
- Utilice pajote orgánico alrededor de las plantas para reducir la evaporación - guardar cientos de galones por año
- Visite http://www.bewaterwise.com para obtener más información.

INFORMACIÓN IMPORTANTE SOBRE SU AGUA POTABLE

Este informe contiene información importante sobre su agua potable.

NO SE CUMPLEN LOS REQUISITOS DE MONITOREO PARA LA CIUDAD DE HUNTINGTON PARK

Nuestro sistema de agua no monitoreó como se requiere para los estándares de agua potable durante el año pasado y, por lo tanto, violó las regulaciones. A pesar de que esta falla no fue una emergencia, como nuestros clientes, tienen derecho a saber qué deben hacer, qué sucedió y qué hicimos para corregir esta situación.

Estamos obligados a monitorear su agua potable para detectar contaminantes específicos de manera regular. Los resultados de los monitoreos regulares son un indicador de si nuestra agua potable cumple o no con los estándares de salud. Durante octubre de 2024, nuestro sistema de agua no monitoreó de acuerdo con la Enmienda de Permiso 1910049PA-003, condición 27. El 16/10/2024 no recogimos la muestra de monitoreo semanal requerida para Tricloroetileno (TCE) de tres puntos de muestra de la Planta de Tratamiento GAC del Pozo 15, que son el afluente, el efluente principal y el efluente de la planta. Por lo tanto, no podemos estar seguros de la calidad de nuestra agua potable durante ese período de tiempo.

¿Qué debo hacer?

- No hay nada que deba hacer en este momento.
- La siguiente tabla enumera los contaminantes que no analizamos adecuadamente durante el último año, cuántas muestras debemos tomar y con qué frecuencia, cuántas muestras tomamos, cuándo se deberían haber tomado las muestras y la fecha en que se tomaron (o se tomarán) las muestras de seguimiento.

Contaminante	Frecuencia de muestreo requerida	Número de muestras tomadas	Cuándo se deberían haber tomado todas las muestras	Cuándo se tomaron o se tomarán muestras
Tricloroetileno (TCE)	Una muestra cada semana	0	10/16/2024	10/23/2024

- Si tiene problemas de salud relacionados con el consumo de esta agua, es posible que desee consultar a su médico.

¿¿Qué pasó? ¿Qué se está haciendo?

Desde entonces, hemos tomado las muestras requeridas como se describe en la última columna de la tabla anterior. Las muestras mostraron que estamos cumpliendo con los estándares de agua potable.

El monitoreo semanal programado regularmente se reanudó la semana siguiente el (23/10/2024) y los resultados para los puntos de muestreo del efluente principal y el efluente de la planta regresaron sin detección del contaminante.

Para obtener más información, comuníquese con el Sr. Gerardo López por teléfono al (323) 584-6274 o por correo a 6900 Bissell Street, Huntington Park, CA 90255.

Comparta esta información con todas las demás personas que beben esta agua, especialmente con aquellas que pueden no haber recibido este aviso directamente (por ejemplo, personas en apartamentos, hogares de ancianos, escuelas y empresas). Puede hacerlo publicando este aviso público en un lugar público o distribuyendo copias en mano o por correo.

Requisitos de notificación secundaria

Al recibir una notificación de una persona que opera un sistema público de agua, se debe dar la siguiente notificación dentro de los 10 días [Sección 116450(g) del Código de Salud y Seguridad]:

- ESCUELAS: Deben notificar a los empleados de la escuela, estudiantes y padres (si los estudiantes son menores de edad).
- PROPIETARIOS O ADMINISTRADORES DE PROPIEDADES RESIDENCIALES DE ALQUILER (incluidos hogares de ancianos y centros de atención): Deben notificar a los inquilinos.
- PROPIETARIOS, GERENTES U OPERADORES DE PROPIEDADES COMERCIALES: Deben notificar a los empleados de las empresas ubicadas en la propiedad.

Este aviso le es enviado por el Sistema de Agua de la Ciudad de Huntington Park.

ID del Sistema Estatal de Agua #: CA1910049

Fecha de distribución: 30/06/2025
