2020 Consumer Confidence Report

Water System Information

Water System Name: 1910138 - Los Angeles World Airports

Report Date: 6/16/21

Type of Water Source(s) in Use: Groundwater

Name and General Location of Source(s): East and West Wells located at 2825 E. Avenue P, Palmdale, CA 93550

Drinking Water Source Assessment Information: A Drinking Water Source Assessment was performed by the California Department of Public Health (CDPH) in July of 2001. The assessment concluded that this water system is most vulnerable to airport maintenance and fueling activities, chemical processing and storage, and other general activities related to military bases. A copy of this assessment may be found by contacting the State Water Resources Control Board (SWRCB – formerly CDPH) at (818) 551-2004 or on the SWRCB website:

http://waterboards.ca.gov/drinking water/certlic/drinkingwater/publicwatersystems.html

Time and Place of Regularly Scheduled Board Meetings for Public Participation: N/A

For More Information, Contact: Tamara McCrossen-Orr at 424-646-6734

About This Report

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2020 and may include earlier monitoring data.

Importance of This Report Statement in Five Non-English Languages (Spanish, Mandarin, Tagalog, Vietnamese, and Hmong)

Language in Spanish: Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse 1910138 – Los Angeles World Airports a 2825 E. Avenue P, Palmdale, CA 93550 para asistirlo en español.

Language in Mandarin: 这份报告含有关于您的饮用水的重要讯息。请用以下地址和电话联系 1910138 – Los Angeles World Airports 以获得中文的帮助: 2825 E. Avenue P, Palmdale, CA 93550, 424-646-6474.

Language in Tagalog: Ang pag-uulat na ito ay naglalaman ng mahalagang impormasyon tungkol sa inyong inuming tubig. Mangyaring makipag-ugnayan sa 1910138 – Los Angeles World Airports 2825 E. Avenue P, Palmdale, CA 93550 o tumawag sa 424-646-6474 para matulungan sa wikang Tagalog.

Language in Vietnamese: Báo cáo này chứa thông tin quan trọng về nước uống của bạn. Xin vui lòng liên hệ 1910138 – Los Angeles World Airports tại 2825 E. Avenue P, Palmdale, CA 93550 để được hỗ trợ giúp bằng tiếng Việt.

Language in Hmong: Tsab ntawv no muaj cov ntsiab lus tseem ceeb txog koj cov dej haus. Thov hu rau 1910138 – Los Angeles World Airports ntawm 2825 E. Avenue P, Palmdale, CA 93550 rau kev pab hauv lus Askiv.

Terms Used in This Report

Term	Definition
Level 1 Assessment	A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
Level 2 Assessment	A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.
Maximum Contaminant Level (MCL)	The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
Maximum Contaminant Level Goal (MCLG)	The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).
Maximum Residual Disinfectant Level (MRDL)	The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
Maximum Residual Disinfectant Level Goal (MRDLG)	The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
Primary Drinking Water Standards (PDWS)	MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.
Public Health Goal (PHG)	The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.
Regulatory Action Level (AL)	The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.
Secondary Drinking Water Standards (SDWS)	MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.
Treatment Technique (TT)	A required process intended to reduce the level of a contaminant in drinking water.
Variances and Exemptions	Permissions from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.
ND	Not detectable at testing limit.
ppm	parts per million or milligrams per liter (mg/L)
ppb	parts per million or milligrams per liter (mg/L)
ppt	parts per trillion or nanograms per liter (ng/L)
NTU	nephelometric turbidity units (a measure of cloudiness)

Term Definition						
µs/cm	microSiemens per centimeter (a measure of electric conductivity)					
pCi/L	picocuries per liter (a measure of radiation)					

Sources of Drinking Water and Contaminants that May Be Present in Source Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

Regulation of Drinking Water and Bottled Water Quality

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

About Your Drinking Water Quality

Drinking Water Contaminants Detected

Tables 1, 2, 3, 4, 5, 6, and 8 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Microbiological Contaminants	Highest No. of Detections	No. of Months in Violation	MCL	MCLG	Typical Source of Bacteria
Total Coliform Bacteria (State Total Coliform Rule)	0 (In a month)	0	1 positive monthly sample ^(a)	0	Naturally present in the environment
Fecal Coliform or <i>E. coli</i> (State Total Coliform Rule)	0 (In the year)	0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive	None	Human and animal fecal waste
<i>E. coli</i> (Federal Revised Total Coliform Rule)	0 (In the year)	0	(b)	0	Human and animal fecal waste

 Table 1. Sampling Results Showing the Detection of Coliform Bacteria

(a) Two or more positive monthly samples is a violation of the MCL

(b) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

Table 2. S	Sampling Results S	Showing the Detection	of Lead and Copper
------------	--------------------	-----------------------	--------------------

Lead and Copper	Sample Date	No. of Sam- ples Collect- ed	90 th Percen- tile Level Detecte d	No. Sites Exceed -ing AL	AL	PHG	No. of Schools Requestin g Lead Sampling	Typical Source of Contaminant
Lead (ppb)	6-26- 2018	10	0	0	15	0.2	n/a	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	6-26- 2018	10	0.23	0	1.3	0.3	n/a	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

Table 3. Sampling Results for Sodium and Hardness

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	4-16-2010	32	31-33	None	None	Salt present in the water and is generally naturally occurring
Hardness (ppm)	4-16-2010	56.5	48-65	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

Table 4. Detection of Contaminants with a Primary Drinking Water Standard

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Gross Alpha Particle Activity (pCi/l)	7-27-2016	0.95	0.501-1.40	15	(0)	Erosion of natural deposits
Total Radium (pCi/l)	7-27-2016	0.363	-	5	N/A	Erosion of natural deposits
Barium (ppm)	8-7-2019	0.0255	0.014-0.037	1	2	Discharge of oil drilling wastes and from metal refineries; erosion of natural deposits
Chromium (ppb)	8-7-2019	<100	<10-<10	50	(100)	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits
Nitrate as N (ppm)	8-3-2020	1.03	0.76-1.3	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion from natural deposits
Aluminum (ppm)	8-7-2019	0.525	<0.05-1.0	1	0.6	Erosion of natural deposits; residue from some surface water treatment processes

Copper (ppm)	9-24-2015	0.140	0.051-0.22	(AL=1.3)	0.3	Corrosion of plumbing/internal plumbing surfaces; erosion of natural deposits; leachate from wood preservatives
Haloacetic Acids (HAA5) (ppb)	8-3-2020	1.45	<1-1.9	60	N/A	Byproduct of drinking water disinfection
Total Trihalomethanes (TTHMS) (ppb)	8-3-2020	4.75	<2-7.5	80	N/A	Byproduct of drinking water disinfection
Fluoride (ppm)	8-7-2019	0.086	0.076-0.097	2	1	Erosion of natural deposits; discharge from fertilizer and aluminum factories

Table 5. Detection of Contaminants with a Secondary Drinking Water Standard

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	SMCL	PHG (MCLG)	Typical Source of Contaminant
Aluminum (ppb)	8-24-2016	56.3	ND-56.3	200	600	Erosion of natural deposits; residual from some surface water treatment processes
Color (color units)	11-11-2020	5.6	2-20	15	None	Naturally-occurring organic materials
Chloride (ppm)	4-6-2010	11.9	8.7-15	500	None	Runoff; leachate from natural deposits; seawater influence
Copper (ppm)	9-24-2015	0.140	0.051-0.22	1	0.3	Corrosion of plumbing/internal plumbing surfaces;
Iron (ppb)	4-6-2010	59.5	19-100	300	None	Leachate from natural deposits; industrial waste
Manganese (ppb)	4-16-2010	1.4	0.5-2.36	50	None	Leachate from natural deposits
Odor (odor units)	11-11-2020	0.3	ND-1	3	None	Naturally-occurring organic materials
Specific Conductance (uS/cm)	8-27-2015	240	-	1600	None	Substances that form ions in water; seawater influence

Sulfate (ppm)	4-16-2010	20	17-23	500	None	Runoff/leachate from natural deposits; industrial wastes
Total Dissolved Solids (ppm)	8-2-2018	180	140-220	1000	None	Runoff; leachate from natural deposits
Turbidity (units)	6-2-2020	5.02	0.52-17	5	None	Soil runoff

Table 6. Detection of Unregulated Contaminants

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Health Effects Language
None	N/A	N/A	N/A	N/A	N/A

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. [Enter Water System's Name] is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [Optional: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at http://www.epa.gov/lead.

Additional Special Language for Nitrate, Arsenic, Lead, Radon, and *Cryptosporidium*: [Enter Additional Information Described in Instructions for SWS CCR Document]

Federal Revised Total Coliform Rule (RTCR): [Enter Additional Information Described in Instructions for SWS CCR Document]

Violation	Explanation	Duration	Actions Taken to Correct Violation	Health Effects Language
None	None	None	None	None

Table 7. Violation of a MCL, MRDL, AL, TT or Monitoring Reporting Requirement

For Water Systems Providing Groundwater as a Source of Drinking Water

 Table 8. Sampling Results Showing Fecal Indicator-Positive Groundwater Source Samples

Microbiological Contaminants (complete if fecal- indicator detected)	Total No. of Detections	Sample Dates	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
E. coli	None	None	0	(0)	Human and animal fecal waste
Enterococci	None	None	тт	N/A	Human and animal fecal waste
Coliphage	None	None	тт	N/A	Human and animal fecal waste

Violation	Explanation	Duration	Actions Taken to Correct Violation	Health Effects Language
None	None	None	None	None

Summary Information for Operating Under a Variance or Exemption

We are not operating under a variance or exemption.

Level 1 or Level 2 Assessment Requirement not Due to an E. coli MCL Violation

Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system. We found coliforms indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct assessment(s) to identify problems and to correct any problems that were found during these assessments.

During the past year we were required to conduct [Insert Number of Level 1 Assessments] Level 1 assessment(s). [Insert Number of Level 1 Assessments] Level 1 assessment(s) were completed. In addition, we were required to take [Insert Number of Corrective Actions] corrective actions and we completed [Insert Number of Corrective Actions] of these actions.

During the past year [Insert Number of Level 2 Assessment] Level 2 assessments were required to be completed for our water system. [Insert Number of Level 2 Assessments] Level 2 assessments were completed. In addition, we were required to take [Insert Number of Corrective Actions] corrective actions and we completed [Insert Number of Corrective Actions] of these actions.

[For Violation of the Total Coliform Bacteria TT Requirement, Enter Additional Information Described in Instructions for SWS CCR Document]

Level 2 Assessment Requirement Due to an E. coli MCL Violation

E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely-compromised immune systems. We found *E. coli* bacteria, indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct assessment(s) identify problems and to correct any problems that were found during these assessments.

We were required to complete a Level 2 assessment because we found *E. coli* in our water system. In addition, we were required to take [Insert Number of Corrective Actions] corrective actions and we completed [Insert Number of Corrective Actions] of these actions.

[For Violation of the *E. coli* TT Requirement, Enter Additional Information Described in Instructions for SWS CCR Document]
