

South Montebello Irrigation District 2025 Consumer Confidence Report

Cross Control Updates

The South Montebello Irrigation District is implementing significant changes to its Cross Connection Control policies as required by the State of California in 2026. All district customers will have a risk assessment completed regarding potential cross-connection issues on their property. Commercial and Industrial customers are required to have an adequate backflow prevention device on their domestic water and fire sprinkler systems. Upgrades to backflow devices and costs are the responsibility of the property owner, if updates are not made water service to the property in a timely manner water services will be shut off until upgrades are made.

Backflow prevention devices are crucial tools used to prevent contamination of the water system by polluted water and chemicals in commercial properties. We hope to gain full cooperation from our customers with the Cross Connection Control Plans, understanding that the district is **required** to enforce these regulations by the State Water Resources Control Board Division of Drinking Water Cross Connection Control Policy Handbook.

Water Conservation Updates

California experienced less rain and snow this past fall and winter compared to previous years. To date half of California is abnormally dry compared to previous years. Abnormally dry conditions is an indicator the California is heading into a drought. South Montebello Irrigation District will continue to promote water conservation as a standard practice moving forward. We ask our customers to conserve water by adhering to the specified lawn watering days and times listed below.

For more information on the Drought from Website:

<https://www.drought.gov/states/california>

Watering Days: Monday and Thursday Odd # Addresses (Example: 1601 Date St.)

Tuesday and Friday Even # Addresses (Example: 1602 Date St.)

Watering Time: Any time between 5:00 PM and 9:00 AM

Watering Duration: 10 minutes per sprinkler station or irrigation zone

SOUTH MONTEBELLO IRRIGATION DISTRICT

2025 ANNUAL WATER QUALITY REPORT

Since 1991, California water utilities have been providing information on water served to its consumers. This report is a snapshot of the tap water quality that we provided last year. Included are details about where your water comes from, how it is tested, what is in it, and how it compares with state and federal limits. We strive to keep you informed about the quality of your water, and to provide a reliable and economical supply that meets all regulatory requirements.

Where Does My Tap Water Come From?

Your tap water comes from local, deep groundwater wells that supply our service area shown on the adjacent map. In addition, we also purchased groundwater from the Montebello Land and Water Company in 2025. The quality of groundwater delivered to your home is presented in this report.

How is My Drinking Water Tested?

Your drinking water is tested by certified professional water system operators and certified laboratories to ensure its safety. South Montebello Irrigation District drinking water from wells and distribution system pipes are routinely tested for bacterial, radiological and chemical constituents. The chart in this report shows the average and range of concentrations of the constituents tested in your drinking water during year 2025 or from the most recent tests. The State Water Resources Control Board, Division of Drinking Water (DDW) allows some constituents to be tested less than once per year because the concentrations of these constituents do not change frequently. Some of our data, although representative, are more than one year old. The chart lists all the

constituents **detected** in your drinking water that have federal and state drinking water standards. Detected unregulated constituents of interest are also included. We remain dedicated to providing you with a reliable supply of high quality drinking water.

How Do I Read the Water Quality Table?

Although we test for over 100 substances, regulations require us to report only those detected in your water. The first column of the water quality table lists substances detected in your water. The next columns list the average concentration and range of concentrations found in your drinking water. Following are columns that list the MCL and PHG or MCLG, if appropriate. The last column describes the likely sources of these substances in drinking water.

To review the quality of your drinking water, compare the highest concentration and the MCL. Check for substances greater than the MCL. Exceeding a primary MCL does not usually constitute an immediate health threat. Rather, it requires testing the source water more frequently for a short duration. If test results show that the water continues to exceed the MCL, the water must be treated to remove the substance, or the source must be removed from service. South Montebello Irrigation District distributes water that has been disinfected with chlorine to prevent bacterial growth in distribution pipes.

Why Do I See So Much Coverage in the News About the Quality Of Tap Water?

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, including viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming;
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gasoline stations, urban stormwater runoff, agricultural application, and septic systems;
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. Environmental Protection Agency (USEPA) Safe Drinking Water Hotline (1-800-426-4791). You can also get more information on tap water by logging on to these helpful web sites:

- <https://www.epa.gov/ground-water-and-drinking-water> (USEPA drinking water web site)
- https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/publicwatersystems.html (DDW drinking water web site)

Lead has not been detected in our groundwater sources; however, lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The South Montebello Irrigation District is responsible for providing high quality drinking water and removing lead pipes, but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact the South Montebello Irrigation District at (323) 721-4735. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <http://www.epa.gov/safewater/lead>.

South Montebello Irrigation District has completed a lead service line inventory to identify the presence of lead service line within the water system. The lead service line inventory effort determined there was no lead service line in the water system. For more information, please contact the South Montebello Irrigation District at (323) 721-4735.

What Are Water Quality Standards?

In order to ensure that tap water is safe to drink, USEPA and the DDW prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that must provide the same protection for public health.

The chart in this report shows the following types of water quality standards:

- **Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
- **Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial pathogens.
- **Primary Drinking Water Standard:** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.
- **Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

What is a Water Quality Goal?

In addition to mandatory water quality standards, USEPA and DDW have set voluntary water quality goals for some contaminants. Water quality goals are often set at such low levels that they are not achievable in practice and are not directly measurable. Nevertheless, these goals provide useful guideposts and direction for water management practices. The chart in this report includes three types of water quality goals:

- **Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.
- **Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Should I Take Additional Precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The USEPA/Centers for Disease Control guidelines on appropriate means to lessen the risk of infection of *Cryptosporidium* and other microbial contaminants are available from the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Source Water Assessment

The South Montebello Irrigation District conducted an assessment of its groundwater supplies in 2003. Groundwater supplies are considered most vulnerable to other animal operations, utility station maintenance areas, automobile body shops, automobile repair shops, electrical/electronic manufacturing, fleet/truck/bus terminals, illegal activities/unauthorized dumping, junk/scrap/salvage yards, automobile gasoline stations, dry cleaners, historic gasoline stations, furniture repair/manufacturing, and National Pollutant Discharge Elimination System/Waste Discharge Requirement permitted discharges. A copy of the approved assessment may be obtained in person at 437 South Bluff Road, Montebello, California 90640.

The Montebello Land and Water Company conducted an assessment of its groundwater supplies in 2003. Groundwater supplies are considered most vulnerable to water supply wells, historic railroad right-of-ways, and railroads, and may be vulnerable to landfills/dumps, automobile gasoline stations, dry cleaners, sewer collection systems, and fleet/truck/bus terminals. A copy of the approved assessment may be obtained by contacting Korey Bradbury at (323) 722-8654.

How Can I Participate in Decisions On Water Issues That Affect Me?

Board meetings of the South Montebello Irrigation District are held on the third Wednesday of each month at 5:00 p.m. at 437 South Bluff Road, Montebello, California 90640. These meetings provide an opportunity for public participation in decisions that may affect the quality and reliability of your water. Please call the South Montebello Irrigation District office at (323) 721-4735 during regular business hours Monday through Friday between 9 a.m. and 5 p.m. for the meeting schedule.

How Do I Contact My Water Agency If I Have Any Questions About Water Quality?

If you have specific questions about your tap water quality, please contact Mr. Jordan Betancourt at (323) 721-4735.

Este informe contiene información muy importante sobre su agua potable. Para más información o traducción, favor de contactar a Mr. Jordan Betancourt. Teléfono: 323-721-4735.

Announcing!

The Easiest Way to Pay Your Bill

Our new online bill payment option saves you time and gives you more flexibility in how you pay your bill.

If you have internet connection and an e-mail address, you can now pay your bill online. It's fast, it's easy. It's secure, and you no longer have to write a check each month or find a stamp when it's time to send in your payment.

Signing up is easy!

1. Go to www.xpressbillpay.com
2. Select "new to Xpress Bill Pay"
3. Fill out the brief form
4. Pay your bill or setup auto pay

How It works

When you sign up for online bill payment you get a unique password that you use to access your personal account. Every month you will receive a reminder e-mail to let you know when your bill is online.

Then, just log in through your Web Browser and view your bill, which will look like the paper statement you're familiar with. Select a payment type- debit, credit card, or electronic funds transfer- enter the information, and you are done.

It is easy and only takes a few minutes each month. Sign up today and see why this is the best way to pay your water bill.

EL DISTRITO DE IRRIGACIÓN DEL SUR DE MONTEBELLO

INFORME ANUAL DE LA CALIDAD DEL AGUA DEL AÑO 2025

Desde 1991, las agencias proveedoras de recursos hidráulicos de California han emitido información sobre el agua que se provee al consumidor. Este informe es una copia del informe sobre la calidad del agua potable que le proveímos el año pasado. Incluimos detalles sobre el origen del agua que toma, cómo se analiza, que contiene, y cómo se compara con los límites estatales y federales. Nos esforzamos por mantenerle informado sobre la calidad de su agua, y proveerle un abastecimiento confiable y económico que cumpla con todos los requisitos.

¿De Dónde Proviene el Agua que Tomo?

Su agua de la llave proviene de las aguas subterráneas de uno o más pozos profundos. Estos pozos abastecen nuestra área de servicio que muestra el mapa adjunto. Además, también compramos aguas subterráneas de la Compañía de Agua y Tierra de Montebello en 2025. La calidad del agua que llega a su hogar se presenta en este informe.

¿Cómo Se Analiza Mi Agua Potable?

Su agua potable es analizada por operadores profesionales certificados del sistema del agua y por laboratorios certificados para garantizar su seguridad. El agua potable Del Distrito de Irrigación del Sur de Montebello, de pozos y tuberías de distribución del sistema, son rutinariamente sometidas a pruebas para componentes de bacteria, radioactividad u otros químicos. La tabla en este informe muestra el promedio y la variedad de concentraciones de los componentes analizados en su agua potable durante el año 2025 o de las pruebas más recientes. La Junta de Control de Recursos Hídricos del Estado, División de Agua Potable (DDW) nos permite analizar algunas sustancias menos frecuentemente que los periodos anuales porque los resultados no cambian con frecuencia. Algunos de nuestros datos, aunque están representados, tienen más de un año. La tabla incluye todos los componentes **detectados** en su agua potable bajo las leyes estatales y federales. Componentes de interés no regularizados también han sido incluidos. Permanecemos dedicados a proveerle agua potable de la más alta calidad.

¿Cómo Interpreto Mi Informe de Calidad del Agua?

Aunque analizamos más de 100 sustancias, las normas nos requieren que reportemos solo aquellas que se encuentran en el agua. La primera columna en la tabla de la calidad de agua muestra la lista de las sustancias detectadas en el agua. La siguiente columna muestra la lista de la concentración promedio y el rango de concentraciones que se hayan encontrado en el agua que usted toma. En seguida están las listas del MCL, el PHG y el MCLG, si estos son apropiados. La última columna describe las probables fuentes u origen de las sustancias detectadas en el agua potable.

Para revisar la calidad de su agua de beber, compare la concentración más alta y los niveles máximos de contaminantes. Si los resultados superan el nivel de contaminantes, no constituye necesariamente una amenaza para la salud de inmediato. Más bien, se requiere analizar la fuente de agua con más frecuencia por un corto periodo. Si los resultados siguen siendo superiores a los niveles máximos permisibles de contaminantes, el agua debe ser tratada para cumplir con las normas primarias de agua potables o la fuente debe ser retirada del servicio público. Distribuyen el agua que ha sido desinfectada con cloro para prevenir el crecimiento de bacterias en las tuberías de distribución.

¿Por Qué Hay Tanta Publicidad Sobre La Calidad Del Agua Potable?

Las fuentes del agua potable (de ambas agua de la llave y agua embotellada) incluyen ríos, lagos, arroyos, lagunas, embalses, manantiales, y pozos. Al pasar el agua por la superficie de los suelos o por la tierra, se disuelven minerales que ocurren al natural, y en algunas ocasiones, material radioactivo, al igual que pueden levantar sustancias generadas por la presencia de animales o por actividades humanas.

Entre los contaminantes que pueden existir en las fuentes de agua se incluyen:

- Contaminantes microbiales como los virus y la bacteria, los que pueden venir de las plantas de tratamiento de aguas negras, de los sistemas sépticos, de las operaciones de ganadería, y de la vida salvaje;
- Contaminantes inorgánicos, como las sales y los metales, los cuales pueden ocurrir naturalmente o como resultado del desagüe pluvial, industrial, o de alcantarillado, producción de gas natural y petróleo, minas y agricultura.
- Pesticidas y herbicidas, los cuales pueden venir de varias fuentes tales como la agricultura, del desagüe pluvial, y de usos residenciales;

- Contaminantes de otras sustancias químicas orgánicas, incluyendo químicos orgánicos volátiles y sintéticos que son productos de procesos industriales y de la producción de petróleo, y que pueden provenir de las estaciones de gasolina, desagües pluviales urbanos, y agricultura aplicación y de sistemas sépticos;
- Contaminantes radioactivos, los cuales pueden ocurrir naturalmente o que pueden ser resultados de las actividades de la producción de gas natural y minería.

Toda el agua potable, incluyendo el agua embotellada, puede contener cantidades pequeñas de ciertos contaminantes. La presencia de contaminantes no necesariamente indica que haya algún riesgo de salud. Para más información acerca de contaminantes y riesgos a la salud favor de llamar a La Agencia Federal de Protección al Medio Ambiente (USEPA) encargada de proteger el agua potable al teléfono (1-800-426-4791). Usted puede obtener más información sobre el agua potable al conectarse al Internet en los siguientes domicilios:

- <https://www.epa.gov/ground-water-and-drinking-water> (página web de USEPA)
- https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/publicwatersystems.html (página web de DDW)

El plomo puede causar graves problemas de salud, especialmente en mujeres embarazadas y niños pequeños. El plomo encontrado en el agua potable proviene en su mayor parte de materiales y componentes relacionados con líneas de servicio y plomerías de los hogares. El Distrito de Irrigación del Sur de Montebello es el responsable de proporcionar agua potable de alta calidad y de quitar las tuberías de plomo, pero no puede controlar la variedad de materiales usados en los componentes de la plomería de su hogar. Usted comparte la responsabilidad de protegerse a usted mismo y a su familia del plomo en la plomería de su hogar. Puede hacerse responsable al identificar y quitar los materiales de plomo de la plomería de su hogar y al tomar acción para reducir el riesgo para su familia. Antes de beber agua de la canilla, descargue sus tuberías por varios minutos al dejar abierta su canilla, tomarse una ducha, lavar la ropa o lavar los platos. También puede utilizar un filtro certificado por un organismo acreditado por el American National Standards Institute para reducir el plomo en el agua potable. Si está preocupado/a por la presencia de plomo en su agua y desea que su agua sea analizada, póngase en contacto con el Distrito de Irrigación del Sur de Montebello al (323) 721-4735. Información sobre el plomo en el agua potable, métodos de análisis, y pasos que puede tomar para minimizar la exposición disponibles en <http://www.epa.gov/safewater/lead>.

El Distrito de Irrigación del Sur de Montebello ha completado un inventario de las líneas de servicio de plomo para identificar la presencia de líneas de servicio de plomo en el sistema de agua. El esfuerzo de inventario de las líneas de servicio de plomo determinó que no había líneas de servicio de plomo en el sistema de agua. Para más información, por favor contacte a el Distrito de Irrigación del Sur de Montebello al (323) 721-4735.

¿Cuales Son las Normas de la Calidad del Agua Potable?

Con el fin de asegurar que el agua del grifo es segura para beber, USEPA y DDW imponen reglamentos que limitan la cantidad de ciertos contaminantes en el agua suministrada por sistemas públicos de agua. El U.S. Food and Drug Administration (FDA) y la ley de California también establece límites de contaminantes en el agua embotellada que debe proveer la misma protección para la salud pública.

La tabla en este informe muestra los siguientes tipos de normas de calidad del agua

- **Nivel Máximo de Contaminante (MCL, en inglés):** El nivel más alto de un contaminante que se permite en el agua potable. Los MCLs primarios se establecen lo más cerca posible, económicamente y tecnológicamente a los PHGs o MCLGs. Los MCLs secundarios se establecen para proteger el olor, sabor y apariencia en el agua de beber.
- **Nivel Máximo de Desinfectante Residual (MRDL, en inglés):** El nivel más alto de un desinfectante que se permite en el agua potable. Hay pruebas suficientes de que la adición de un desinfectante es necesario para mantener el control de los patógenos microbianos.
- **Norma Primaria del Agua Potable:** Los MCLs y MRDLs para contaminantes que afectan la salud junto con sus requisitos de monitoreo y presentación de informes y requisitos del tratamiento de agua.
- **Nivel de Acción Regulatorio (AL, en inglés):** La concentración de un contaminante que, si se excede, provoca el tratamiento u otros requisitos que un sistema de agua debe seguir.

¿Que son Objetivo de Calidad del Agua?

Además de las normas obligatorias de calidad del agua, la USEPA y DDW han establecido metas voluntarias para calidad del agua en algunos contaminantes. Los objetivos de la calidad del agua se han establecido en niveles tan bajos que no son alcanzables en práctica y no son directamente medibles. Sin embargo, estos objetivos proveen guías útiles y prácticas de dirección para el manejo del agua. La tabla en este informe incluye tres tipos de objetivos de calidad del agua:

- **Meta de Nivel Máximo de Contaminante (MCLG, en inglés):** El nivel de un contaminante en el agua potable bajo el cual no hay riesgo conocido o previsto asía la salud. Los MCLGs son establecidos por la USEPA.

- **Meta de Nivel Máximo de Desinfectante Residual (MRDLG, en inglés):** El nivel de un desinfectante bajo el cual no hay riesgo conocido o previsto hacia la salud. MRDLG no reflejan los beneficios del uso de desinfectantes para controlar los contaminantes microbianos.
- **Meta de Salud Pública (PHG, en inglés):** El nivel de un contaminante en el agua potable bajo el cual no hay riesgo conocido o previsto así la salud. Los PHGs son establecidos por la Agencia de Protección Ambiental de California.

¿Debería Tomar Otras Precauciones?

Algunas personas pueden ser más vulnerables a los contaminantes en el agua potable que el público en general. Las personas que tienen problemas inmunológicos, o sea esas personas que estén en tratamiento por medio de quimioterapia cancerosa; personas que tienen órganos transplantados, o personas con HIV/AIDS o desordenes inmunológicos, personas de edad avanzada, y los bebés que son particularmente susceptibles a ciertas infecciones. Estas personas deben de consultar a sus proveedores de salud médica. Las guías de la USEPA/Centros de Control de Enfermedades aconsejan cómo disminuir los riesgos para prevenir la infección de *Cryptosporidium* y otros contaminantes microbiales están disponibles por teléfono de la USEPA encargada de proteger el agua potable al teléfono (1-800-426-4791).

Valoración de su Abastecimiento de Agua

El Distrito de Irrigación del Sur de Montebello condujo una valoración de su abastecimiento de aguas subterráneas en el 2003. El abastecimiento de aguas subterráneas es considerado más vulnerable a operaciones animales; a estaciones de utilidad y mantenimiento; a talleres automotrices de acabados exteriores; a talleres automotrices; a la manufactura de electricidad y productos electrónicos; a flotas, camiones, y terminales de autobuses; a actividades no autorizadas y relacionadas con los basureros ilegales, a basureros y áreas de almacenamiento para chatarra, a estaciones de gasolina; tintorerías; a estaciones históricas de gasolina; a la fabricación y reparación de muebles; y descargas permitidas. Una copia de la valoración aprobada puede ser obtenida en persona en el 437 South Bluff Road, Montebello, California 90640.

La Compañía de Agua y Tierra de Montebello condujo una valoración de sus abastecimientos de agua subterránea en el 2003. El abastecimiento de aguas subterráneas es considerado más vulnerable a los pozos de agua para abastecimiento, a los derechos de vía de los ferrocarriles históricos, a las vías ferroviarias, y pueden ser vulnerables a basureros cubiertos y sin cubrir, a estaciones de gasolina, a tintorerías, a sistemas de drenaje, a flotas de camiones y terminales. Una copia de la valoración puede ser obtenida llamando a Korey Bradbury al (323) 722-8654.

¿Cómo Puedo Participar en las Decisiones Sobre Asuntos Acerca del Agua Que Me Puedan Afectar?

Reuniones del Consejo de El Distrito de Irrigación del Sur de Montebello se llevan a cabo a el tercer miércoles de cada mes a las 5:00 p.m. en el 437 South Bluff Road, Montebello, California 90640. Estas reuniones ofrecen la oportunidad de participación pública en las decisiones que puedan afectar la calidad y la confiabilidad de su agua. Favor de llamar al El Distrito de Irrigación del Sur de Montebello al (323) 721-4735 durante horas hábiles de Lunes a Viernes de 9 a.m. a 5 p.m., para el horario de reuniones.

¿Cómo Me Pongo En Contacto Con Mi Agencia del Agua Si Tengo Preguntas Sobre La Calidad Del Agua?

Si usted tiene preguntas específicas sobre la calidad del agua potable, por favor llame al Señor Jordan Betancourt (323) 721-4735.

Anunciando!

La forma más fácil de pagar su factura

Nuestra nueva opción de pago de facturas en línea le ahorra tiempo y le da más flexibilidad en la forma de pagar su factura. Si tiene conexión a internet y una dirección de correo electrónico, ahora puede pagar su factura en línea. Es rápido, es fácil. Es seguro, y usted ya no tiene que escribir un cheque cada mes o encontrar una estampilla a la hora de enviar su pago.

Inscribirse es fácil!

1. Ir a www.xpressbillpay.com
2. Seleccione "Nuevo a Xpress Bill Pay"
3. Llene el breve formulario
4. Pague su factura o configura un pago automático

Cómo Funciona

Al registrarse en pago de facturas en línea obtendrá una contraseña única que utilizara para acceder a su cuenta personal. Cada mes recibirá por e-mail un recordatorio para hacerle saber cuándo la factura está disponible.

Luego, sólo tiene que iniciar sesión a través de su navegador Web y ver su factura, que tendrá una apariencia similar a la factura en papel acostumbrada. Seleccione un tipo de pago, tarjeta de crédito, débito o transferencia electrónica de fondos- introduce la información, y ya está hecho.

Es fácil y toma sólo unos pocos minutos cada mes. Inscríbase hoy mismo y vea por qué esta es la mejor manera de pagar su cuenta de agua.

SOUTH MONTEBELLO IRRIGATION DISTRICT 2025 ANNUAL WATER QUALITY REPORT

SECONDARY STANDARDS MONITORED IN THE DISTRIBUTION SYSTEM – FOR AESTHETIC PURPOSES

PHYSICALS	DISTRIBUTION SYSTEM		MOST RECENT TEST	MCL	PHG	MAJOR SOURCES IN DRINKING WATER
	AVERAGE	RANGE				
Color (color units)	ND	ND	Tested monthly	15	-	Naturally-occurring organic materials
Odor (threshold odor number)	1	1	Tested monthly	3	-	Naturally-occurring organic materials
Turbidity (ntu)	0.24	ND - 1.5	Tested monthly	5	-	Erosion of natural deposits

ADDITIONAL CHEMICALS OF INTEREST

MINERALS / CHEMICALS	GROUNDWATER		MOST RECENT TEST	IMPORTED GROUNDWATER (a)		MOST RECENT TEST	FOOTNOTES
	AVERAGE	RANGE		AVERAGE	RANGE		
Alkalinity (mg/l as CaCO3)	140	110 - 160	2020 - 2025	180	170 - 210	2023 - 2025	(a) Results are from groundwater imported from the Montebello Land and Water Company.
Calcium (mg/l)	50	34 - 71	2020 - 2025	65	57 - 79	2023 - 2025	(b) Over 50 regulated and unregulated organic chemicals were analyzed. None were detected at or above the reporting limit.
Magnesium (mg/l)	9.6	6.9 - 12	2020 - 2025	12	9.5 - 16	2023 - 2025	(c) Routine and repeat samples are total coliform-positive and either is E. coli-positive or system fails to take repeat samples following E. coli-positive routine sample or system fails to analyze total coliform-positive repeat sample for E. coli.
Perfluorobutane Sulfonic Acid (ng/l)	<3	ND - 5.3	2021 - 2025	9.2	3.8 - 12	2025	(d) Running annual average used to calculate MCL compliance.
Perfluorobutanoic Acid (ng/l)	<5	ND - 5.8	2025	12	4.7 - 16	2025	(e) Maximum Residual Disinfectant Level (MRDL)
Perfluorodecanoic Acid (ng/l)	<3	ND - 3.3	2021 - 2025	<3	ND - 3.1	2025	(f) Maximum Residual Disinfectant Level Goal (MRDLG)
Perfluoroheptanoic Acid (ng/l)	<3	ND - 3.4	2021 - 2025	3.6	ND - 6.8	2025	(g) 90th percentile from sampling at selected customer taps.
Perfluorohexane Sulfonic Acid (ng/l)	<3	ND - 7	2021 - 2025	6	4.8 - 8	2025	(h) Manganese was found at levels that exceed the secondary MCL of 50 µg/l.
Perfluorohexanoic Acid (ng/l)	3.6	ND - 6.9	2021 - 2025	5.8	ND - 11	2025	The manganese secondary MCL was set to protect you against unpleasant aesthetic effects (e.g., color, taste, and odor) and the staining of plumbing fixtures (e.g., tubs and sinks) and clothing while washing. The high manganese levels are due to leaching of natural deposits.
Perfluorononanoic Acid (ng/l)	ND	ND	2021 - 2025	<4	ND - 4.8	2025	(i) Samples collected at entry points into the distribution system as part of the Fifth Unregulated Contaminant Monitoring Rule (UCMR 5)
Perfluorooctane Sulfonic Acid (ng/l)	22	ND - 37	2021 - 2025	63	39 - 68	2025	
Perfluorooctanoic Acid (ng/l)	8.1	ND - 12	2021 - 2025	20	4 - 22	2025	
Perfluoropentanoic Acid (ng/l)	<3	ND - 7.5	2025	6.3	ND - 12	2025	
pH (standard unit)	7.3	6.2 - 8	2020 - 2025	7.7	7.1 - 7.9	2023 - 2025	
Potassium (mg/l)	3.1	2.7 - 3.7	2020 - 2025	3.8	3.3 - 4.3	2023 - 2025	
Sodium (mg/l)	36	29 - 42	2020 - 2025	51	46 - 54	2023 - 2025	
Total Hardness (mg/l)	170	110 - 230	2020 - 2025	210	180 - 260	2023 - 2025	

UNREGULATED CONTAMINANTS REQUIRING MONITORING (i)

CONTAMINANTS AND UNITS	GROUNDWATER		MOST RECENT TEST
	AVERAGE	RANGE	
Lithium (µg/l)	<9	ND - 19	2024
Perfluorobutane Sulfonic Acid (ng/l)	<3	ND - 4.9	2024
Perfluorodecanoic Acid (ng/l)	<3	ND - 3.7	2024
Perfluorohexanoic Acid (ng/l)	3	ND - 6.6	2024
Perfluorooctane Sulfonic Acid (ng/l)	15	8.7 - 20	2024
Perfluorooctanoic Acid (ng/l)	5.4	ND - 8.2	2024
Perfluoropentanoic Acid (ng/l)	3	ND - 6.7	2024

µg/l = micrograms per liter or parts-per-billion; mg/l = milligrams per liter or parts-per-million; ng/l = nanograms per liter or parts-per-trillion; pCi/L = picoCuries per liter; ntu = nephelometric turbidity units; µmho/cm = micromhos per centimeter; ND = not detected; < = average is less than the detection limit for reporting purposes; MCL = Maximum Contaminant Level; (MCLG) = federal MCL Goal; PHG = California Public Health Goal

Water Quality Updates

PFA's

South Montebello Irrigation District (SMID) has been working on developing a new treatment plant to remove perfluoroalkyl and polyfluoroalkyl substances (PFA's) from its drinking water. As mentioned last year, these groups of substances found in our local water supply are now regulated by the State Water Resources Control Board. The recent test results reported in this Water Quality Report fall above the notification and response levels in some of our wells. SMID will begin construction on this project this year and will continue to monitor the groundwater through required testing at our well sites every quarter.

Below is the PFA results throughout 2025 in Parts Per Trillion (PPT) units. The Notification Levels for PFOA is 4 ppt, PFOS is 4 ppt, PFBS is 500 ppt and PFHxS is 3 ppt. The Response limit for PFOA is 10 ppt, PFOS is 40 ppt, PFBS is 5000 ppt and PFHxS is 10 ppt. Manganese has a maximum contaminant level of .05 mg/L.

		WELL 3	WELL 7
QUARTER 1	PFOA	10	6.3
Sampled	PFOS	23	16
2/10/2025	PFBS	4.6	1.9
	PFHxS	2.5	3.2
QUARTER 2	PFOA	8.4	5.9
Sampled	PFOS	23	15
5/19/2025	PFBS	3.7	1.9
	PFHxS	2	2.8
QUARTER 3	PFOA	10	0
Sampled	PFOS	28	0
9/30/2025	PFBS	5.3	2.4
	PFHxS	0	0
QUARTER 4	PFOA	9.9	0
Sampled	PFOS	28	0
11/13/2025	PFBS	5.1	0
	PFHxS	2.6	0
Average PFOA		9.575	3.05
Average PFOS		25.5	7.75

For more information of PFA's please visit the website: <https://www.waterboards.ca.gov/pfas/>

Well 6 was used on August 8, 2025 results for PFA's are on posted below.

SMID received water produced from Montebello Land and Water for the months August, September, October and November 2025.

Previous notifications for PFA's are posted on South Montebello Irrigation Districts website at:

<https://smid.specialdistrict.org/water-quality>

Well 6	PFOA	PFOS	PFBS	PFHxS	Manganese (mg/L)
	10	29	3.3	3.6	.076

**Consumer Confidence Report
Certification Form**
(to be submitted with a copy of the CCR)

(To certify electronic delivery of the CCR, use the certification form on the State Water Board's website at
http://www.swrcb.ca.gov/drinking_water/certlic/drinkingwater/CCR.shtml)

Water System Name:	SOUTH MONTEBELLO IRRIGATION DISTRICT
Water System Number:	CA1910153

The water system named above hereby certifies that its Consumer Confidence Report was distributed on 6/30/26 to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water.

Certified by:	JORDAN BETANCOURT
Name:	JORDAN BETANCOURT
Signature:	
Title:	ENGINEERING MANAGER
Phone Number:	323-721-4735
Date:	6/30/26

To summarize report delivery used and good-faith efforts taken, please complete the below by checking all items that apply and fill-in where appropriate:

- ☐ CCR was distributed by mail or other direct delivery methods. Specify other direct delivery methods used: **[INSERT DELIVERY METHODS]**
- ☒ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - ☒ Posting the CCR on the Internet at <https://smid.specialdistrict.org/water-quality>
 - ☐ Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - ☐ Advertising the availability of the CCR in news media (attach copy of press release)
 - ☐ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - ☐ Posted the CCR in public places (attach a list of locations)
 - ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
 - ☐ Delivery to community organizations (attach a list of organizations)
 - ☐ Other (attach a list of other methods used)
- ☐ For systems serving at least 100,000 persons: Posted CCR on a publicly-accessible internet site at the following address: **[INSERT INTERNET ADDRESS]**
- ☐ For investor-owned utilities: Delivered the CCR to the California Public Utilities Commission

This form is provided as a convenience for use to meet the certification requirement of the California Code of Regulations, section 64483(c).
