:	2020 Consumer	Confidenc	e Report					
Water System Name:		Report Date:						
Su	Irfwood Estates Mutu	al Water Co.	20210610					
Type of water source(s) in use:	Surface Water							
Name & general location of ource(s):         Jack Peters Creek, Mendocino, California. Mendocino County.								
Drinking Water Source AssessmentWatershed Sanitary Survey, 07/2012: Copy located at Treatment Plant.								
Time and place of regularly participation:	scheduled board meetin	gs for public	4pm on the third Thursday of the month at the residence of the board president or other member					
Contact Desiree Ramos a drinking water.	t desiree.diana.ramos@	gmail.com for	public information pertaining to your					
For more information, contact:	Sarah Bradley		<b>(530) 244-1453</b> Phone:					
	TERMS USE	D IN THIS REPO	RT					
Maximum Contaminant Le level of a contaminant tha water. Primary MCLs are s (or MCLGs) as is economic feasible. Secondary MCL odor, taste, and appearance	at is allowed in drinking set as close to the PHGs cally and technologically is are set to protect the ce of drinking water.	<ul> <li>MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.</li> <li>Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of</li> </ul>						
Maximum Contaminant Le		•	ater. Contaminants with SDWSs do not nat the MCL levels.					

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

Page 1 of 11

Protection Agency (USEPA).

which there is no known or expected risk to health.

MCLGs are set by the U.S. Environmental

Public Health Goal (PHG): The level of a

contaminant in drinking water below which there is

no known or expected risk to health. PHGs are set

by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL):

The highest level of a disinfectant allowed in

drinking water. There is convincing evidence that

addition of a disinfectant is necessary for control of

microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Level 1 Assessment: A level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system. ppb: parts per billion or micrograms per liter ( $\mu$ g/L) ppt: parts per trillion or nanograms per liter (ng/L) ppq: parts per quadrillion or picogram per liter (pg/L) pCi/L: picocuries per liter (a measure of radiation) Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2020 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also

Page 2 of 11

establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, 7, and 8 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Page 3 of 11

TABLE 1 –	SAMPLING	G RESULT	'S SHOW	ING THE DE	ETECTIO	N OF COLIF	ORM BACTERIA
Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of m viola		MC	L	MCLG	Typical Source of Bacteria

TABLE 4 – D	DETECTION	OF CONT	AMINANTS	WITH A <u>P</u>	<u>RIMARY</u> DF	NINKING WATER STANDARD					
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant					
INORGANICS											
Aluminum, ppm	7-27-15	0.075	-	1.0	0.6	Some people who drink water containing aluminum in excess of the MCL over many years may experience short-term gastrointestinal tract effects.					
Barium, ppb	7-27-15	20	-	1000	-	Discharge of oil drilling wastes and from metal refineries; erosion of natural deposits					
Chromium. Hexavalent, ppb	7-27-15	ND	-	10.0	-	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits					
Flouride (F, Natural Source), ppm	7-27-15	ND	-	4.0	-	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories					
Nitrate, ppm	8/12/202 0	0	-	45	23.0	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits.					
Perchlorate, ppm	7-27-15	<.0000	-	6.0	1.0	Perchlorate has been shown to interfere with uptake of iodide by the thyroid gland, and to thereby reduce the production of thyroid hormones, leading to adverse affects associated with inadequate hormone levels. Thyroid hormones are needed for normal prenatal growth and development of the fetus, as well as for normal growth and development in the infant and child. In adults, thyroid hormones are needed for normal metabolism and mental function.					
			DISINFECTIC	N BY-PRO	DUCTS						
HAA5, ppm	3/18/2020 6/19/2020 9/11/2020 12/29/202 0	6.2	ND ND 15.4 9.4	60	-	Byproduct of drinking water disinfection					
TTHM, ppm	3/18/2020 6/19/2020 9/11/2020 12/29/202 0	73.5	79 84 52 79	80	-	By-product of drinking water disinfection					
			OR	GANICS							
Turbidity, NTU	7/23/2013	1.60	-	5	-	Turbidity has no health effects. However, high levels of turbidity can					

Page 6 of 11

						interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease- causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.
			RADIO	OLOGICAL		
Gross Alpha MDA95, PCI/L	2-17-16	0.239	-	3.001	-	Erosion of natural deposits
Radium 226 MDA 95, PCI/L	N/A	N/A	-	1.001	-	Erosion of natural deposits
Radium 228 MDA 95, PCI/L	N/A	N/A	-	1.001	-	Erosion of natural deposits

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Chloride, ppm	7-27-15	21 MG/L	-	250	-	Runoff/leaching from natural deposits; seawater influence.
Color, (unit-less)	8/12/202 0	45	-	15.0	-	Naturally-occurring organic materials.
Iron, ppm	10/1/202 0	670ppm	-	300	-	Leaching from natural deposits; industrial wastes.
Manganese, ppb	7-27-15	6.1 ppb	-	50	-	Leaching from natural deposits
Odor, TON	7-27-15	0	-	3.0	-	Naturally-occurring organic materials
Specific Conductance, S	7-27-15	120 US	-	1600	-	Substances that form ions when in water; seawater influence
Sulfate, ppm	7-27-15	2.1 MG/L	-	250	-	Runoff/leaching from natural deposits; industrial wastes.
Total Dissolved Solids (TDS), ppm	7-27-15	78 MG/L	-	500	-	Runoff/leaching from natural deposits.
Zinc, ppb	7-27-15	ND	-	5000	-	Runoff/leaching from natural deposits; industrial wastes.

\* Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

## Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. <u>Surfwood Estates Mutual Water Corporation</u> is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/lead.

## Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

For Systems Providing Surface Water as a Source of Drinking Water

	VIOLATION OF A MCL,	MRDL, AL,	TT, OR MONITORING AN	D REPORTING REQUIREMENT
Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language

Page 9 of 11

ТТНМ	DBP's are formed during/after disinfection with chlorine.	Ongoing	Lowering residual chlorine in distribution system. Lowering overall storage volume.		Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience liver, kidney, or central nervous system problems, and may have an increased risk of getting cancer.		
HAA5	DBP's are formed during/after disinfection with chlorine.	Ongoing	chlo S	owering residual orine in distribution ystem. Lowering overall storage volume.	Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.		
		E30E13 3F			SUNFACE WATEN SOUNCES		
Treatment Technique <sup>(a)</sup> (Type of approved filtration technology used)				CDPH approved alternative filtration technology.			
Turbidity Performance Standards <sup>(b)</sup> (that must be met through the water treatment process)				Turbidity of the filtered water must: 1 – Be less than or equal to _0.3 NTU in 95% of measurements in a month. 2 – Not exceed _1.0 NTU for more than eight consecutive hours. 3 – Not exceed _5.0 NTU at any time.			
Lowest monthly percentage of samples that met Turbidity Performance Standard No. 1.				100 %			
Highest sin	gle turbidity measurement	during the y	ear				
Number of requiremen	violations of any surface w ts	ater treatme	nt	0			

(a) A required process intended to reduce the level of a contaminant in drinking water.

(b) Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.

\* Any violation of a TT is marked with an asterisk. Additional information regarding the violation is provided below.

## Summary Information for Violation of a Surface Water TT

VIOLATION OF A SURFACE WATER TT
