2019 Consumer Confidence Report

Water System Name: Hills Ranch Mutual Water Company Report Date: 4/18/20

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2019 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Hills Ranch Mutual Water Company a PO Box 379, Mendocino, CA 95460 para asistirlo en español.

Type of water source(s) in use: Groundwater wells

Name & general location of source(s): Wells # 2, 4, 11, 13 located within the subdivision of Hills Ranch

Drinking Water Source Assessment information: A source water assessment was conducted for wells in January 2002

Sources considered most vulnerable to the following activities not associated with any detectable
contaminants: above ground storage tanks, transportation corridors (right of way, herbicide use areas, and or
freeways,) wells. A copy of the complete assessment may be viewed at California Department of Public
Health, 50 D Street, Suite 200, Santa Rosa, CA 95404. You may request a summary of the assessment to be
sent to you by contacting Sheri Miller, P.E. District Engineer (707) 576-2734.

Time and place of regularly scheduled board meetings for public participation:

Board meets as necessary

For more information, contact: Rick Keller or Donna Feiner Phone: 707 937 3320 or 937 0720

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (μ g/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA							
Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of Months in Violation	MCL	MCLG	Typical Source of Bacteria		
Total Coliform Bacteria	(In a month)	0	1 positive monthly sample	0	Naturally present in the		
(state Total Coliform Rule)	<u>0</u>				environment		
Fecal Coliform or <i>E. coli</i>	(In the year)	0	A routine sample and a repeat	0	Human and animal fecal		
(state Total Coliform Rule)	0		sample are total coliform positive,		waste		
and one of these is als		and one of these is also fecal					
			coliform or <i>E. coli</i> positive				
E. coli	(In the year)	0	(a)	0	Human and animal fecal		
(federal Revised Total	0				waste		
Coliform Rule)							

(a) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER								
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 th Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant
Lead (ppb)	8/19	5	ND	0	15	0.2		Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	8/19	5	0.41	0	1.3	0.3	Not applicable	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

	TABLE 3	- SAMPLING F	RESULTS FOR	SODIUM A	AND HARDI	NESS		
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant		
Sodium (ppm)	4/10/19	74.7	40 - 98	None	None	Salt present in the water and is generally naturally occurring		
Hardness (ppm)	4/10/19	128	48 - 238	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring		
TABLE 4 – DET	ECTION C	F CONTAMINA	ANTS WITH A	PRIMARY	DRINKING	WATER STANDARD		
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant		
Copper mg/l	4/10/19	.062	ND <.062	1.3	0.3	Erosion of natural deposits; leaching from wood preservatives		
Nitrate mg/l	11/19	0.17	0.4< - 0.66	10 mg/l	45 mg/l	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits		
Chlorine (mg/l)	2019	.32	0.19 - 0.69	4	4	Drinking water disinfection added for treatment		
Gross Alpha Activity Pci/L	4/5/15	2.18	0.535 - 3.0	15	0	Decay of natural and man-made deposits		
Flouride mg/l	8/13/15	0.13	ND-0.27	2	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories		
Total Haloacedic Acids, ug/L	9/5/17	8.9		80	N/A	Byproduct of drinking water disinfection		
Total Trihalomathanes ug/l	9/5/17	60.5		60	N/A	By-product of drinking water chlorination		
TABLE 5 – DETE	CTION OF	CONTAMINA	NTS WITH A <u>S</u> I	ECONDAR	<u>Y</u> DRINKIN	IG WATER STANDARD		
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	SMCL	PHG (MCLG)	Typical Source of Contaminant		
Aluminum ppb	4/10/19	24.3	0-73	200	N/A	Erosion of natural deposits; residual from some surface water treatment processes		
Chloride mg/L	4/10/19	107	32-240	500	N/A	Runoff/leaching from natural deposits; seawater influence		
Manganese ppb	10/7/19	160	20 - 440	50	N/A	Leaching from natural deposits		
Specific Conductance UMho	4/10/19	563	310 - 960	1600	N/A	Substances that form ions when in water; seawater influence		
Sulfate mg/L	4/10/19	25.7	11 - 49	500	N/A	Runoff/leaching from natural deposits; industrial wastes		
Total Dissolved Solids Mg/L	4/10/19	373	200 - 650	1000	N/A	Runoff/leaching from natural deposits		
Turbidity NTU	4/10/19	.36	0.1 < -0.84	5	N/A	Soil runoff		
	TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notifica	ntion Level	Health Effects Language		
None Detected								

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing Hills Ranch Mutual Water Company is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [OPTIONAL: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at http://www.epa.gov/lead.

Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

VIOLATION OF A MCL, MRDL, AL, TT, OR MONITORING AND REPORTING REQUIREMENT							
Violation	Explanation Duration Actions Taken to Correct the Violation Health Effects Language						
None							

For Water Systems Providing Groundwater as a Source of Drinking Water

TABLE 7 – SAMPLING RESULTS SHOWING FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLES							
Microbiological Contaminants (complete if fecal-indicator detected) Total No. of Detections Sample Dates MCL [MRDL] [MRDL] Typical Source of Contaminant Typical Source of Contaminant							
E. coli	(In the year) 0		0	(0)	Human and animal fecal waste		
Enterococci	(In the year) 0		TT	N/A	Human and animal fecal waste		
Coliphage	(In the year) 0		TT	N/A	Human and animal fecal waste		

Summary Information for Fecal Indicator-Positive Groundwater Source Samples, Uncorrected Significant Deficiencies, or Groundwater TT

SPECIAL NOTICE OF FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLE Not Applicable							
SPECIAL NOTICE FOR UNCORRECTED SIGNIFICANT DEFICIENCIES Not Applicable							
VIOLATION OF GROUNDWATER TT							
TT Violation Explanation Duration Actions Taken to Correct the Violation Health Effects Language							
None
