2019 Consumer Confidence Report

Water System Name: Mountain Meadows Mutual Water Company Report Date: July 2020

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2018 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Mountain Meadows Mutual Water Company a http://www.mountainmeadowswater.com/ para asistirlo en español.

Type of water source(s) in use:

4 Groundwater Wells

Blair Hafner or

Name & general location of source(s):

Well 3 is located in the meadow behind Elderberry Drive. Wells 5 is located off of South Landing near Highway 395. Wells 1 and 4 located off of Meadowview Drive are offline.

Drinking Water Source Assessment information:

Mono County Health Department

Time and place of regularly scheduled board meetings for public participation: At the Crowley Lake Community Center on South Landing Drive

Fall of 2020 TBD

For more information, contact:

http://www.mountainmeadowswater.com/

TERMS USED IN THIS REPORT

Phone: (760) 935-4504

## Maximum Contaminant Level (MCL): The highest level of a Secondary Drinking Water Standards (SDWS): MCLs for contaminants contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels. Treatment Technique (TT): A required process intended to reduce the

level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: Permissions from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L) ppb: parts per billion or micrograms per liter (µg/L) **ppt**: parts per trillion or nanograms per liter (ng/L) ppq: parts per quadrillion or picogram per liter (pg/L) pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

## Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

TA	BLE 1 – SA	MPLING RE	SULTS SHO	WING THE DET	ECTION	OF COLI	FORM BACTERI	A
Microbiological Contaminants (complete if bacteria detected)	Highest of Detect		of Months Violation	MCL			MCLG	Typical Source of Bacteria
Total Coliform Bacteria (state Total Coliform Rule)	(In a mo	nth)	0	1 positive monthly sample			0	Naturally present in the environment
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	(In the ye	ear)	0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive				Human and animal fecal waste
<i>E. coli</i> (federal Revised Total Coliform Rule)	(In the ye	ear)	0	(a)			0	Human and animal fecal waste
(a) Routine and repeat sample positive routine sample or sys	tem fails to	analyze tota	l coliform-pos	sitive repeat sam	ple for <i>E</i> .	coli.	to take repeat sar	
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 <sup>th</sup> Percentile Level Detected	No. Sites Exceeding	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of
Lead (ppb)	2018	10	<0.005	0	15	0.2	0	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	2018	10	0.770	0	1.3	0.3	Not applicable	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	2019	8.9	8.0-9.8	None	None	Salt present in the water and is generally naturally occurring
Hardness (ppm)	2019	27	27	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring
TABL	E 4 – DETEC	TION OF CONTAMI	NANTS WITH A <u>P</u>	RIMARY DRI	NKING WATE	R STANDARD
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Nitrate-N (mg/L)	2019	.61	0.49 - 0.73	10	10	Runoff & leaching from fertilizer use, septic tank s and sewage; erosion of natural deposits
Radioactivity – Gross Alpha Particle Activity pCi/L	2018 Average	1.3	0.52 – 2.12	15	none	Erosion of natural deposits
TABLE	5 – DETECTIO	ON OF CONTAMIN	ANTS WITH A <u>Se</u>	<u>CONDARY</u> D	RINKING WA	TER STANDARD
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	SMCL	PHG (MCLG)	Typical Source of Contaminant
Arsenic (mg/L)	2019	<2.0	ND	10	0.004	Erosion of natural deposits
Calcium (mg/L)	2019	9.6	9.6	none		Erosion of natural deposits
Chloride (mg/L)	2019	1.4	1.2 – 1.5	250		Erosion of natural deposits
Potassium (mg/L)	2019	3.3	2.1 – 4.4	none		Erosion of natural deposits
Total Dissolved Solids (mg/L)	2019	97.5	95 – 100	500		Dissolved minerals from natural deposits
Turbidity (NTU)	2019	0.15	0.15	5		Erosion of natural deposits

## Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. [ENTER WATER SYSTEM'S NAME] HERE] is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water SWS CCR Form Revised February 2019 has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [OPTIONAL: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <a href="http://www.epa.gov/lead">http://www.epa.gov/lead</a>.

Well 5 and Well 3 are being used as our source water. They are both functioning very well. There have been no problems with any contaminants during the year.

## The conservation of water is greatly appreciated.

California has received less than average snow pack this year but because of the years of drought the wells are still recovering. We are keeping a close eye on the water levels in our wells and will respond with restriction on water usage as needed. Our only restriction at this time is:

NO WATERING BETWEEN 10AM and 4PM
