### 2018 Consumer Confidence Report

Water System Name:	USMC MWT	C Report Do	ate:	20 June 2019			
We test the drinking water quali the result.		required by State and Federal I eriod of January 1 - December	_	This report shows			
Este informe contiene infor	• •	obre su agua beber. Trad ienda bien.	úzcalo ó h	able con alguien			
Type of water source(s) in use:	Ground Water Wells						
Name & location of source(s):	Well # 1 and Well # 2. P	ickle Meadow, Bridgeport, CA.					
Drinking Water Source Assessmen	t information: <u>N/</u>	A					
Time and place of regularly schedu	led board meetings for public	c participation:		N/A			
For more information, contact	Larry W. Robasciotti	Phone:	760-932	2-1601			
	TERMS US	SED IN THIS REPORT:					
Maximum Contaminant Level (MC contaminant that is allowed in drin are set as close to the PHGs (or N	nking water. Primary MCLs		n or expecte	contaminant in drinking water ed risk to health. PHGs are set on Agency.			
and technologically feasible. Second protect the odor, taste, and appear Primary Drinking Water Standar	arance of drinking water.	Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).					
contaminants that affect health a and reporting requirements, and w requirements.	-	Regulatory Action Level (AL which, if exceeded, triggers water system must follow.					
Secondary Drinking Water Stand		ppb: parts per billion or micro	grams per li	iter (ug/L)			
contaminants that affect taste, or drinking water. Contaminants with	• •	ppt: parts per trillion or nano	grams per li	ter (ng/L)			
health at the MCL levels.		pCi/L: picocuries per liter (a 1	measure of 1	radiation)			
ND: not detectable at testing limi	it	Variance and Exemptions:	Senartment	nermission to			

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

under certain conditions

Variance and Exemptions: Department permission to

exceed an MCL or not comply with a Treatment technique

#### Contaminants that may be present in source water include:

ppm: parts per million or milligrams per liter (mg/L)

Micromhos: Unit of electrical conductance

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, USEPA and the state Department of Health Services prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

The following tables list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, are more than one year old.

DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD									
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant			
Arsenic (ppb)	7/20/16	6.4	5.7 - 6.4	10	0.004				
Nitrate	12/26/2018	0.61	ND-0.61	10					
Nitrite	11/17	ND	ND	1					

DETECTION RESULTS FOR DISINFECTANTS/DISINFECTION BYPRODUCTS MONITORING								
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant		
HAA5 (ppb)	8/18	3.6	3.3-3.9	60	N/A	By-product of drinking water chlorination		
TTHMs (ppb)	8/18	5.9	5.7-5.9	80	N/A	By-product of drinking water chlorination		

DETECTION RESULTS FOR LEAD AND COPPER IN THE DISTRIBUTION SYSTEM										
Lead and Copper (to be completed only if there was a detection of lead or copper in the last sample set)	No. of samples collected	90 <sup>th</sup> percentile level detected	No. Sites exceeding AL	AL	MCLG	Typical Source of Contaminant				
Lead (ppb) Sept. 2017	5	ND	0	15	N/A	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits.				
Copper (ppm) Sept. 2017	5	0.39	0	1.3	N/A	Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives.				

DETECTION RESULTS FOR UNREGULATED CHEMICALS								
Chemical or Constituent (and reporting units)  Sample Level Range of Detected Detections  Notification Level Health Effects Language								
No volatile or synthetic organics detected in the wells or system.	2017							

DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD									
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant			
Manganese (ppb)	2017	ND	ND	50	N/A	Leaching from natural deposits			
Iron (ppb)	2017	ND	ND	300	N/A	Leaching from natural deposits; industrial wastes			

DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD									
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant			
Specific Conductance (umhos/cm2)	2017	390	330-390	500	N/A	Substances that form ions when in water; seawater influence			
Sulfate (ppm)	2017	7.2	3.5-7.2	500	N/A	Runoff/leaching from natural deposits; industrial wastes			

<sup>\*</sup>Any violation of an MCL or AL is asterisked. Additional information regarding the violation is provided below.

GENERAL MINERAL AND PHYSICAL DETECTION RESULTS									
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant			
Total Hardness (as CaCO3) (ppm)	11/17	180	140-180	N/A	N/A	Erosion of natural deposits			
Calcium (ppm)	11/17	45	34-45	N/A	N/A	Erosion of natural deposits			
Magnesium (ppm)	11/17	16	14 - 16	N/A	N/A	Erosion of natural deposits			
Sodium (ppm)	11/17	12	12	N/A	N/A	Erosion of natural deposits			
						Erosion of natural deposits			

**Arsenic:** While your drinking water meets the current standard for arsenic, it does contain low levels of arsenic. The standard balances the current understanding of arsenic's possible health effects against the cost of removing arsenic from drinking water. The California Department of Health Services continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and other circulatory problems.

## Additional General Information On Drinking Water

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

\*\*\*\*

. *Any violation of an MCL	. or AL is aste	erisked. Addi	tional informa	ition regarding	g the violation	ı is provided o	on page 4

page 6

2018 CCR

# Summary Information for Contaminants Exceeding an MCL or AL, or a Violation of any Treatment or Monitoring and Reporting Requirements

recame or moment ing and responding requirements
The USMCMWTC Water System is required to collect two samples a month for total coliform and E. coli.
During July of 2018 the second sample was collected by operations staff, but did not get analyzed by the lab.
That resulted in the USMCMWTC Water System violating the State permit. The USMCMWTC Water System
collected both site samples on the 8 <sup>th</sup> of August as well as both source wells. The missed sample from July was
also sampled again on the 22 <sup>nd</sup> of August. All sample results = ND for both Total Coliform and E. Coli.

## For Systems Providing Surface Water As A Source Of Drinking Water:

(Refer to page 1, "Type of Water Source" to see if your source of water is surface water or groundwater)

TABLE 6 - SAMPLING RESULTS SHOWING TREATMENT OF SURFACE WATER SOURCES							
Treatment Technique *							
(Type of approved filtration technology used)							
Turbidity Performance Standards **	<u>Turbidity of the filtered water must</u> :						
(that must be met through the water treatment process)	<ul><li>1 - Be less than or equal to NTU in</li><li>95% of measurements in a month.</li></ul>						
	2 - Not exceed NTU for more than eight consecutive hours.						
	3 - Not exceed NTU at any time.						
Lowest monthly percentage of samples that met Turbidity Performance Standard No. 1.							
Highest single turbidity measurement during the year							
The number of violations of any surface water treatment requirements							

<sup>\*</sup> A required process intended to reduce the level of a contaminant in drinking water.

Summary	Information	tor	Surtace	Water	Ireatment
+: :	ton doubood				

MWTC does not utilize surface water sources.					

TABLE 1 - SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA							
Microbiological Contaminants (to be completed only if there was a detection of bacteria)	_	No. of months in violation	MCL	MCLG	Typical Source of Bacteria		

<sup>\*\*</sup> Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.

Total Coliform Bacteria	0	0	More than 1 sample in a month with a detection	0	Naturally present in the environment
Fecal Coliform or E. coli	0	0	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or E. coli	0	Human and animal fecal waste
