

# 2019 ANNUAL WATER QUALITY REPORT

RYAN RANCH | PWS ID: 2701446

CALIFORNIA  
AMERICAN WATER

WE KEEP LIFE FLOWING™

RICHARD SVINDLAND  
President

## A Message from California American Water President RICHARD SVINDLAND

Dear California American Water Customer,

Having access to safe, clean water is something that can be easily taken for granted. At California American Water, our top priority is providing safe, reliable drinking water to our more than 690,000 customers.

I am pleased to share with you our 2019 Consumer Confidence Report, which is a testament to the hard work and dedication of our employees who work to provide high quality drinking water.

During the COVID-19 public health emergency, California American Water activated business continuity plans to strengthen our ability to provide reliable, high quality service to our customers, continue to deliver water and wastewater services and protect our employees and customers.

According to the U.S. Environmental Protection Agency (USEPA) based on current research, the risk to water supplies is low. The USEPA has also relayed that Americans can continue to use and drink water from their tap as usual.

California American Water remains committed to the delivery of safe, reliable water. That includes operation of drinking water treatment barriers, which provide an added layer of protection that includes filtration and disinfection of our surface water supplies (e.g., those from lakes, reservoirs or rivers) and disinfection of our groundwater sources (e.g., underground wells).

We have rigorous safeguards in place to help provide water to you that meets or surpasses increasingly stringent water quality standards. Across California, we conducted approximately 650 different tests on over 25,000 water samples for nearly 3,000 constituents last year. We are proud and pleased to confirm that those tests showed that we met every primary and secondary state and federal water quality standard.

**SERVICE:** Last year, we invested more than \$74 million in water infrastructure in the California communities we serve. This investment helps maintain the safety and reliability of the facilities and technology needed to draw, treat, and distribute water.

**VALUE:** While costs to provide water service continue to increase across the country, our investments help us provide high quality water service that remains an exceptional value for such an essential service.

We are proud to continue to supply water that meets or surpasses all state and federal water quality standards. If you have any questions or concerns, you can contact us by phone, email, online at [www.californiaamwater.com](http://www.californiaamwater.com), or in person at our local Customer Center. Please take the time to review this report. It provides details about the source and quality of your drinking water, using data from water-quality testing conducted for your local system between January and December 2019.

Sincerely,

A handwritten signature in blue ink that reads "Richard Svindland".

RICHARD SVINDLAND  
President

# OUR COMMITMENT TO QUALITY

Once again, we proudly present our Annual Water Quality Report, also referred to as a Consumer Confidence Report (CCR). This CCR covers compliance testing completed through December 2019. As in the past, we are committed to delivering high quality drinking water. To that end, we remain vigilant in meeting the challenges of source water protection, water conservation, environmental compliance, sustainability and community education while continuing to serve the needs of all our water users.

## ABOUT CALIFORNIA AMERICAN WATER (CAW) AND AMERICAN WATER (AW)

California American Water, a subsidiary of American Water Works Company, Inc. (NYSE: AWK), provides high quality and reliable water and/or wastewater services to more than 690,000 people. With a history dating back to 1886, American Water is the largest and most geographically diverse U.S. publicly traded water and wastewater utility company. The company employs more than 6,800 dedicated professionals who provide regulated and market-based drinking water, wastewater and other related services to 15 million people in 46 states. American Water provides safe, clean, affordable and reliable water services to our customers to help keep their lives flowing. For more information, visit [amwater.com](http://amwater.com) and follow American Water on Twitter, Facebook and LinkedIn.

A smiling man with short dark hair and a beard, wearing a light gray long-sleeved shirt, is sitting on a light-colored couch. He is looking at a laptop screen which is partially visible in the foreground. The background is a bright, modern living room with a white chair and some plants.

# WHAT IS A CONSUMER CONFIDENCE REPORT (CCR)?

The CCR is an annual water quality report containing data that California American Water and all associated water suppliers collected during 2019. CCRs let consumers know what contaminants, if any, are in their drinking water as well as related health effects. CCRs also include details about where your water comes from and how it is treated. Additionally, they educate customers on what it takes to deliver safe drinking water and highlight the need to protect drinking water sources.

In 2019, we collected numerous samples at various sampling points in your water system. The water quality data presented is a combination of data compiled from American Water's nationally recognized water quality laboratory and local commercial laboratories, all certified in drinking water testing by the State Board's Division of Drinking Water. If you have any questions about this report or your drinking water, please contact our Customer Service Center at (888) 237-1333.

# ABOUT YOUR WATER

Ryan Ranch is served entirely by groundwater sources from the Santa Margarita Aquifer. Drinking water treatment technologies used in your water system include arsenic, iron, and manganese removal; disinfection byproduct control; corrosion control; pH adjustment; and disinfection for bacteriological quality. The water supply is distributed for commercial use.

## **NOTICE OF SOURCE WATER ASSESSMENT (SWA)**

An assessment of the drinking water sources for the California American Water – Ryan Ranch water system was completed in February 2003. The sources that are considered to be vulnerable include drinking water treatment plants and water supply wells. A copy of the completed assessment may be viewed at California American Water, 511 Forest Lodge Road, Suite 100, Pacific Grove, CA. You may request a summary of the assessment be sent to you by contacting Dr. Jack Wang, Water Quality and Environmental Compliance Director, at (831) 646-3269.

# WHAT ARE THE SOURCES OF CONTAMINANTS?

The sources of drinking water include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and can pick up substances resulting from animal or human activity and even radioactive material. In order to ensure that tap water is safe to drink, USEPA and the State Water Resources Control Board set regulations limiting the amount of certain contaminants in water provided by public water systems. Contaminants that may be present in source water include:

## **ORGANIC CHEMICAL CONTAMINANTS**

including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and may also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.

## **INORGANIC CONTAMINANTS**

such as salts and metals, which can be naturally occurring or may result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

## **PESTICIDES AND HERBICIDES**

which may come from a variety of sources, such as agriculture, urban stormwater runoff, and residential uses.

## **MICROBIAL CONTAMINANTS**

such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

## **RADIOACTIVE CONTAMINANTS**

which can be naturally occurring or may be the result of oil and gas production and mining activities.

# RADON

## RADON

Radon is a radioactive gas and known human carcinogen that you cannot see, taste, or smell. Radon can move up through the ground and into a home through cracks and holes in the foundation. Radon can also get into indoor air when released from tap water while showering, washing dishes, or doing other household activities. Radon entering the home through tap water usually produces minor amounts of radon in indoor air compared to radon entering the home through soil.

Breathing air containing radon can lead to lung cancer. Drinking water containing radon may also cause increased risk of stomach cancer. If you are concerned about radon in your home, test the air inside. Testing is inexpensive and easy. You should pursue radon removal for your home if the level of radon in your air is four picocuries per liter of air (pCi/L) or higher. There are simple, relatively inexpensive ways to fix a radon problem. For additional information, call your state radon program at (800) 745-7236, the USEPA Safe Drinking Water Hotline at (800) 426-4791, or the National Safety Council's Radon Hotline at (800) SOS-RADON.

# LEAD

## LEAD

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. California American Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components.

There are steps that you can take to reduce your household's exposure to lead in drinking water. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. For more information, please review our Lead and Drinking Water Fact Sheet at [www.amwater.com/caaw/water-quality/lead-and-drinking-water](http://www.amwater.com/caaw/water-quality/lead-and-drinking-water).

If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at [www.epa.gov/lead](http://www.epa.gov/lead).

# PFOA/PFOS MONITORING

## PFOA/PFOS Monitoring

Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) are fluorinated organic chemicals that are part of a larger group of chemicals referred to as per- and poly-fluoroalkyl substances (PFASs). PFOS and PFOA have been extensively produced and studied in the United States. They have been used in consumer products such as carpets, clothing, fabrics for furniture, paper packaging for food, and other materials (e.g., cookware) designed to be waterproof, stain-resistant or non-stick. In addition, they have been used in fire-retarding foam and various industrial processes.

Exposure to PFOA and PFOS over certain levels may result in adverse health effects, including developmental effects to fetuses during pregnancy or to breastfed infants (e.g., low birth weight, accelerated puberty, skeletal variations), cancer (e.g., testicular, kidney), liver effects (e.g., tissue damage), immune effects (e.g., antibody production and immunity), thyroid effects and other effects (e.g., cholesterol changes). While people are exposed to PFOS and PFOA largely through food, food packaging, consumer products, and house dust, the exposure through drinking water has become an increasing concern due to the tendency of PFASs to accumulate in groundwater. In 2019, Division of Drinking Water (DDW) established Notification Levels (NLs) at 6.5 ppt for PFOS and 5.1 ppt for PFOA in drinking water.

California American Water conducted voluntary PFOA/PFOS monitoring in the source water of Ryan Ranch water system in 2019. PFOA and PFOS were not detected in the water above the detection limits for the testing.

## EDUCATIONAL & SPECIAL HEALTH INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants may be particularly at risk for infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by microbial contaminants are available through the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

# MEASUREMENTS

Water is sampled and tested consistently throughout the year to ensure the best possible quality. Contaminants are measured in:

- **Parts per million (ppm) or milligrams per liter (mg/L)**
- **Parts per billion (ppb) or micrograms per liter ( $\mu\text{g/L}$ )**
- **Parts per trillion (ppt) or nanograms per liter (ng/L)**
- **Grains per gallon (grains/gal)** – A measurement of water hardness often used for sizing household water softeners. One grain per gallon is equal to 17.1 mg/L of hardness.
- **MicroSiemens per centimeter ( $\mu\text{S/cm}$ )** – A measurement of a solution's ability to conduct electricity.
- **Nephelometric Turbidity Units (NTU)** – A measurement of the clarity of water. Turbidity in excess of 5 NTU is noticeable to the average person.
- **PicoCuries per liter (pCi/L)** – A measurement of radioactivity in water.

## PARTS PER MILLION:

# HOW TO READ THIS TABLE

California American Water conducts extensive monitoring to determine if your water meets all water quality standards. The results of our monitoring are reported in the following tables. While most monitoring was conducted in 2019, certain substances are monitored less than once per year because the levels do not change frequently. For help with interpreting this table, see the “Definition of Terms” section.

- 1 Starting with a **Substance**, read across.
- 2 **Year Sampled** is usually in 2019 or year prior.
- 3 **MCL/MRDL/Action Level** shows the highest level of substance (contaminant) allowed.
- 4 **MCLG/PHG/MRDLG** is the goal level for that substance (this may be lower than what is allowed).
- 5 **Average Amount Detected** represents the measured amount (less is better).
- 6 **Range** tells the highest and lowest amounts measured.
- 7 A **No** under **Violation** indicates government requirements were met.
- 8 **Typical Source** tells where the substance usually originates.

Unregulated substances are measured, but maximum contaminant levels have not been established by the government.

## Water Quality Results: Ryan Ranch

### Regulated Substances (Measured on the Water Leaving the Treatment Facility and/or the Source)

| Substance (units)                                 | Year Sampled* | MCL | PHG (MCLG) | Average Amount Detected | Range of Detections |      | Violation | Typical Source              |
|---|---------------|-----|------------|-------------------------|---------------------|------|-----------|-----------------------------|
|   |               |     |            |                         | Low                 | High |           |                             |
| Gross Alpha Particle Activity (pCi/L)             | 2019          | 15  | (0)        | 8.60                    | 8.60                | 8.60 | No        | Erosion of natural deposits |
| Radium 226 (pCi/L)                                | 2017-2018     | 5   | 0.05       | 1.10                    | 0.349               | 1.74 | No        | Erosion of natural deposits |
| Arsenic (ppb) <sup>1</sup>                        | 2019          | 10  | 0.004      | 4.6                     | ND                  | 9    | No        | Erosion of natural deposits |
| Cadmium (ppb)                                     | 2019          | 5   | 0.04       | 1.3                     | ND                  | 2    | No        | Erosion of natural deposits |
| Fluoride (naturally occurring) (ppm) <sup>2</sup> | 2019          | 2.0 | 1          | 0.38                    | 0.23                | 0.66 | No        | Erosion of natural deposits |
| Nitrate as N (ppm)                                | 2019          | 10  | 10         | 0.84                    | ND                  | 1.51 | No        | Erosion of natural deposits |
| Selenium (ppb)                                    | 2019          | 50  | 30         | 7.0                     | 6                   | 8    | No        | Erosion of natural deposits |
| Toluene (ppb)                                     | 2019          | 150 | 150        | 1.1                     | ND                  | 5.6  | No        | Underground tank leaks      |

### Disinfection By-products, Disinfectant Residuals, and Disinfection By-products Precursors (Measured on the Water within the Distribution System)

| Substance (units)                               | Year Sampled | MCL/ MRDL                 | MCLG                      | Average Amount Detected | Range of Detections |       | Violation | Typical Source                                  |
|---|--------------|---------------------------|---------------------------|-------------------------|---------------------|-------|-----------|---|
|   |              |                           |                           |                         | Low                 | High  |           |   |
| Total Trihalomethanes (TTHM) (ppb) <sup>3</sup> | 2019         | 80                        | NA <sup>3</sup>           | 44.5                    | 6                   | 110.8 | No        | By-product of drinking water chlorination       |
| Haloacetic Acids (ppb) <sup>3</sup>             | 2019         | 60                        | NA <sup>3</sup>           | 23.1                    | 3.7                 | 37.2  | No        | By-product of drinking water chlorination       |
| Chlorine (ppm)                                  | 2019         | 4.0 (as Cl <sub>2</sub> ) | 4.0 (as Cl <sub>2</sub> ) | 1.03                    | 0.01                | 2.00  | No        | Drinking water disinfectant added for treatment |

### Tap Water Samples: Lead and Copper Results (Measured on Water in the Distribution System)

| Substance (units) | Year Sampled | Action Level | PHG | Number of Samples | 90 <sup>th</sup> Percentile | Number of Samples Above Action Level | Violation | Typical Source   |
|-------------------|--------------|--------------|-----|-------------------|-----------------------------|--------------------------------------|-----------|--|
| Copper (ppm)      | 2018         | 1.3          | 0.3 | 10                | 0.588                       | 0                                    | No        | Internal corrosion of household plumbing system; Erosion of natural deposits |
| Lead (ppb)        | 2018         | 15           | 0.2 | 10                | 1                           | 0                                    | No        | Internal corrosion of household plumbing system; Erosion of natural deposits |

## Secondary Substances (Measured on the Water Leaving the Treatment Facility and/or the Source)

There are no PHGs, MCLGs, or mandatory standard health effects language for these substances. The secondary MCLs are set on the basis of aesthetic concerns.

| Substance (units)               | Year Sampled* | SMCL | Average Amount Detected | Range of Detections |      | Typical Source                          |
|---------------------------------|---------------|------|-------------------------|---------------------|------|---|
|                                 |               |      |                         | Low                 | High |   |
| Chloride (ppm)                  | 2019          | 500  | 230                     | 189                 | 219  | Leaching from natural deposits          |
| Odor (Units)                    | 2019          | 3    | 2                       | 2                   | 2    | Naturally-occurring organic materials   |
| Iron (ppb)                      | 2019          | 300  | 27                      | ND                  | 250  | Leaching from natural deposits          |
| Manganese (ppb)                 | 2019          | 50   | 21                      | ND                  | 184  | Leaching from natural deposits          |
| Specific Conductance (µmhos/cm) | 2019          | 1600 | 1256                    | 1002                | 1486 | Substances that form ions when in water |
| Sulfate (ppm)                   | 2019          | 500  | 106                     | 51                  | 173  | Leaching from natural deposits          |
| Total Dissolved Solids (ppm)    | 2019          | 1000 | 719                     | 502                 | 900  | Leaching from natural deposits          |

## Additional Water Quality Parameters of Interest (Measured on the Water Leaving the Treatment Facility and/or the Source)

This table shows average levels of additional water quality parameters, which are often of interest to consumers. Values shown here are averages of operating data through 2019. Values may vary from day to day. There are no health-based limits for these substances in drinking water.

| Substance (units)                         | Year Sampled* | Average Amount Detected | Range of Detections |      |
|---|---------------|-------------------------|---------------------|------|
|   |               |                         | Low                 | High |
| Alkalinity as CaCO <sub>3</sub> (ppm)     | 2019          | 222                     | 132                 | 291  |
| Calcium (ppm)                             | 2019          | 79                      | 47                  | 98   |
| Magnesium (ppm)                           | 2019          | 29                      | 21                  | 33   |
| pH (pH Units)                             | 2019          | 7.44                    | 7.08                | 7.83 |
| Sodium (ppm)                              | 2019          | 139                     | 116                 | 178  |
| Total Hardness as CaCO <sub>3</sub> (ppm) | 2019          | 303                     | 201                 | 375  |
| Total Hardness as Grains per Gallon (gpg) | 2019          | 18                      | 12                  | 22   |
| Boron (ppm)                               | 2019          | 0.1                     | ND                  | 0.2  |
| Strontium (ppb)                           | 2019          | 400                     | 300                 | 500  |
| Vanadium (ppb)                            | 2019          | 6                       | 5                   | 7    |

\* The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, are more than one year old.

<sup>1</sup> Arsenic - California American Water's groundwater arsenic removal facility continues to produce water with arsenic levels below the current federal and state standards. While your drinking water meets the federal and state standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The U.S. Environmental Protection Agency continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

<sup>2</sup> Fluoride - California American Water does not add fluoride to the water in the Monterey Peninsula area. Fluoride occurs naturally in the groundwater we serve.

<sup>3</sup> TTHM/HAA5 - Although there is no collective MCLG for this contaminant group, there are individual MCLGs for some of the individual contaminants. Trihalomethanes: bromodichloromethane (zero); bromoform (zero); chloroform (0.07mg/L); dibromochloromethane (0.06 mg/L). Haloacetic Acids: Dichloroacetic Acid (zero); Trichloroacetic Acid (0.02mg/L). Monochloroacetic Acid (0.07mg/L), Bromoacetic Acid and Dibromoacetic Acid are regulated with this group but have no MCLGs.

Additional Monitoring - In addition to the parameters in this table, other parameters were monitored for, including regulated pesticides, herbicides, petroleum by-products and metals. None of those parameters were detected in the water. If you have any questions about this report or your drinking water, please call Customer Service at 1-888-237-1333.

# DEFINITION OF TERMS

**Action Level (AL):** The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements, that a water system must follow.

**DDW:** Division of Drinking Water

**LRAA:** Locational Running Annual Average

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. Secondary MCLs (SMCL) are set to protect the odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**MFL:** Million fibers per liter.

**micromhos per centimeter ( $\mu\text{mhos/cm}$ ):** A measure of electrical conductance.

**NA:** Not applicable

**N/A:** No data available

**ND:** Not detected

**Nephelometric Turbidity Units (NTU):** Measurement of the clarity, or turbidity, of the water.

**Notification Level (NL):** The concentration of a contaminant, which, if exceeded, requires notification to DDW and the consumer. Not an enforceable standard.

**pH:** A measurement of acidity, 7.0 being neutral.

**picocuries per liter (pCi/L):** Measurement of the natural rate of disintegration of radioactive contaminants in water (also beta particles).

**parts per billion (ppb):** One part substance per billion parts water, or micrograms per liter.

**parts per million (ppm):** One part substance per million parts water, or milligrams per liter.

**parts per trillion (ppt):** One part substance per trillion parts water, or nanograms per liter.

**Primary Drinking Water Standard (PDWS):** MCLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California EPA.

**RAA:** Running Annual Average

**Secondary Maximum Contaminant Level (SMCL):** Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**SWRCB:** State Water Resources Control Board

**TON:** Threshold Odor Number

**Total Dissolved Solids (TDS):** An overall indicator of the amount of minerals in water.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**Variances and Exemptions:** State or USEPA permission not to meet an MCL or utilize a treatment technique under certain conditions.

**%:** Percent

# HOW TO CONTACT US

If you have any questions about this report, your drinking water, or service, please call California American Water's Customer Service toll free at (888) 237-1333.
