

**Consumer Confidence Report
Certification Form**
(to be submitted with a copy of the CCR)

(To certify electronic delivery of the CCR, use the certification form on the State Board's website at
http://www.swrcb.ca.gov/drinking_water/certlic/drinkingwater/CCR.shtml)

Water System Name: CORRECTIONAL TRAINING FACILITY

Water System Number: 2710850

The water system named above hereby certifies that its Consumer Confidence Report was distributed on 6/28/2019 to customers. Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water.

Certified by: Name: William Homsany
Signature: 
Title: Correctional Plant Manager II
Phone Number: (831) 678-5975 Date: 6/28/2019

To summarize report delivery used and good-faith efforts taken, please complete the below by checking all items that apply and fill-in where appropriate:

- ☒ CCR was distributed by mail or other direct delivery methods. Specify other direct delivery methods used: Hand carry, deliver to each and every housing unit, posted in library and available on institutional television
- ☐ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
- ☐ Posting the CCR on the Internet at www.
 - ☐ Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - ☐ Advertising the availability of the CCR in news media (attach copy of press release)
 - ☐ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - ☐ Posted the CCR in public places (attach a list of locations)
 - ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
 - ☐ Delivery to community organizations (attach a list of organizations)
 - ☐ Other (attach a list of other methods used)
- ☐ For systems serving at least 100,000 persons: Posted CCR on a publicly-accessible internet site at the following address: www.
- ☐ For investor-owned utilities: Delivered the CCR to the California Public Utilities Commission

This form is provided as a convenience for use to meet the certification requirement of the California Code of Regulations, section 64483(c).

Memorandum

Date : June 26, 2019

To : S. Weldon
Correctional Plant Supervisor

Subject : **LOCATIONS OF CCR REPORTS**

Locations of CCR postings- Facility C
1: Central Entrance Building; Bldg. EE
2: Central Administration; Bldg. A
3: Central Library; Bldg. R
4: Housing Units B thru Z Wing
5: Culinary
6: Mac Office

Locations of CCR posting: North Facility A&B
1: North Entrance Building; Bldg SL
2: North Foyer "Patio" Bldg. SL-100EX
3: North Library; Bldg SF
4: North Housing SA, SB and Toro Dorm
5: North Housing SC, SD and Freemont Dorm
6: SIK Medical Building*
7: Mac Office

Locations of CCR Postings: South Facility D
1: South Entrance Building; Bldg S-71
2: South Administration Building; S-69
3: South Library; Bldg S-52
4: Housing Units S-2 thru S-7
5. S-90*

Residences living on CTF grounds, SH-1 thru SH-16

Trailer park residence, Space Sp1 thru Sp21

Institutional cable TV, available to all within compound.

*Indicates a new building occupied in 2018

Quonset #45 "Employee Gym"

Lift Station S-94

2018 Consumer Confidence Report

Water System Name: Correctional Training Facility

Report Date: 06/18/2019

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2018 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Correctional Training Facility a P.O. Box 686 Soledad CA. 93960 (831) 678-3951 para asistirlo en español.

这份报告含有关于您的饮用水的重要讯息。请用以下地址和电话联系Correctional Training Facility以获得中文的帮助
P.O. Box 686, Soledad CA. (831) 678-3951

Ang pag-uulat na ito ay naglalaman ng mahalagang impormasyon tungkol sa inyong inuming tubig. Mangyaring makipag-ugnayan sa Correctional Training Facility, P.O. Box 686, Soledad CA. 93960 o tumawag sa (831) 678-3951 para matulungan sa wikang Tagalog.

Báo cáo này chứa thông tin quan trọng về nước uống của bạn. Xin vui lòng liên hệ Correctional Training Facility tại (831) 678-3951 để được hỗ trợ giúp bằng tiếng Việt.

Tsab ntawv no muaj cov ntsiab lus tseem ceeb txog koj cov dej haus. Thov hu rau Correctional Training Facility ntawm (831) 678-3951rau kev pab hauv lus Askiv.

Type of water source(s) in use: Ground Water

Name & general location of source(s): Well # 2710850-005, Well # 2710850-006, Well # 2710850-007

Drinking Water Source Assessment information: On File at CTF

Time and place of regularly scheduled board meetings for public participation: N/A

For more information, contact: Bill Homsany CPM II

Phone: (831) 678-5975

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: Permissions from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (µg/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA

Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of Months in Violation	MCL	MCLG	Typical Source of Bacteria
Total Coliform Bacteria (state Total Coliform Rule)	(In a month) 1 April, May Sept.	0	1 positive per monthly sample	0	Naturally present in the environment. Coliform is an indicator that potentially harmful bacteria may be present
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	(In the year)	0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive	0	Human and animal fecal waste
<i>E. coli</i> (federal Revised Total Coliform Rule)	(In the year)	0	(a)	0	Human and animal fecal waste
(a) Routine and repeat samples are total coliform-positive and either is <i>E. coli</i> -positive or system fails to take repeat samples following <i>E. coli</i> -positive routine sample or system fails to analyze total coliform-positive repeat sample for <i>E. coli</i> .					

TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER

Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 th Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant
Lead (ppb)	8/7/17- 8/14/17	20	ND	0	15	0.2		Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	8/7/19 -	20	.203	1.3	1.3	0.3	Not applicable	Internal corrosion of household plumbing systems; erosion of natural

	8/14/19							deposits; leaching from wood preservatives
--	---------	--	--	--	--	--	--	--

TABLE 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	8/16/2018	67	67	None	None	Salt present in the water and is generally naturally occurring
Hardness (ppm)	8/14/2018	229	229	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

TABLE 4 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Arsenic (ug/l)	8/16/2018	2	2	10	10	Erosion of natural deposits ,run off from orchard, glass and electronic wastes
Nitrate (mg/l) As Nitrogen	1/1/2018 - 12/31/18	4.51	3.2 thru 7.2	10	10	Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity
Fluoride (mg/l)	8/8/2018	0.21	0.21	2.0	1.0	Erosion of natural deposits ,water additive which promotes strong teeth, discharge from fertilizer and aluminum factories
Chromium (ug/l)	8/16/2018	5	5	50	100	Discharge from steel and pulp mills and chrome plating, corrosion of natural deposits
Cadmium (ug/l)	8/16/2018	<0.05	<0.5	5	0.04	Internal corrosion of galvanized pipes, corrosion of natural deposits, discharge from electroplating and industrial chemical factories

TABLE 5 – DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	SMCL	PHG (MCLG)	Typical Source of Contaminant
Turbidity (NTU)	8/7/2018	0.05	0.05	5	5	Soil Runoff
Conductivity umho/cm	8/10/2018	772	700-900	1600	1600	Substances that form ions in water ,sea water influences
Total dissolved solids (mg/l)	8/9/2018	520	400-600	1000	1000	Runoff/ leaching from natural deposits
Sulfate (mg/l)	8/8/2018	110	100-200	500	500	Runoff/leaching from natural deposits
Chloride (mg/l)	8/8/2018	78	0-100	500	500	Runoff/leaching from natural deposits

TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Health Effects Language
Chromium 6	10/2/2017	4.7	4.1-5.2	10	N/A
Perchlorate (ug/l)				6	Perchlorate is an inorganic chemical used in solid rocket propellant, explosives, flares, matches, and a variety of industries
Trihalomethanes	8/8/2018 – 8/18/2018	ND < 0.50 0.74	ND< 0.50 0.74	80	In excess of MCL over many years may cause liver ,kidney ,or central nervous problems ,increased risk of

					cancer
--	--	--	--	--	--------

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. **Correctional Training Facility** is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <http://www.epa.gov/lead>.

Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

VIOLATION OF A MCL, MRDL, AL, TT, OR MONITORING AND REPORTING REQUIREMENT				
Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language
02_05_18C_008	Failure to test all backflow devices annually	2015, 2016, 2017	All CTF backflow devices tested, repaired or replaced Replaced new -20 Repaired - 7 Passed 1 st test 46 Removed 3 Total backflow tested and certified 2018 - 76 All subsequent sampling for primary and secondary contaminants proved below the MCL's	Possible backflow – cross connection incident from hazardous chemicals – contaminants entering the system.
02_05_18c_023	Failure to test all water sources within 24 hours of a total coliform positive	5/1/2018 – 5/15/2018	Review TCR with all operators .Sample tap modifications. Chlorine Residual monitoring	Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other potentially- harmful bacteria may be present. Coliforms were found in one sample per one month and this was a warning of a potential problem. SEE NOTE

In 2018 CTF system 2710850 had no e-coli positives. The violation that occurred on 5/1/2018 was due to the fact source samples were not taken within 24 hours after distribution total coliform positive. Well # 5 was sampled within 24 hours but wells # 6 and # 7 were inadvertently omitted. Subsequent samples taken 5/14/2018 and 5/15/2018 from wells #5, #6, and #7 all resulted absent for total coliforms. Distribution samples were taken per sample site plan and all tested absent for total coliform bacteria.

For Water Systems Providing Groundwater as a Source of Drinking Water

**TABLE 7 – SAMPLING RESULTS SHOWING
FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLES**

Microbiological Contaminants (complete if fecal-indicator detected)	Total No. of Detections	Sample Dates	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
<i>E. coli</i>	(In the year)		0	(0)	Human and animal fecal waste
Enterococci	(In the year)		TT	N/A	Human and animal fecal waste
Coliphage	(In the year)		TT	N/A	Human and animal fecal waste

Summary Information for Fecal Indicator-Positive Groundwater Source Samples, Uncorrected Significant Deficiencies, or Groundwater TT

SPECIAL NOTICE OF FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLE

SPECIAL NOTICE FOR UNCORRECTED SIGNIFICANT DEFICIENCIES

VIOLATION OF GROUNDWATER TT

TT Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language

For Systems Providing Surface Water as a Source of Drinking Water

TABLE 8 - SAMPLING RESULTS SHOWING TREATMENT OF SURFACE WATER SOURCES

Treatment Technique ^(a) (Type of approved filtration technology used)	
---	--

Turbidity Performance Standards ^(b) (that must be met through the water treatment process)	Turbidity of the filtered water must: 1 – Be less than or equal to ____ NTU in 95% of measurements in a month. 2 – Not exceed ____ NTU for more than eight consecutive hours. 3 – Not exceed ____ NTU at any time.
Lowest monthly percentage of samples that met Turbidity Performance Standard No. 1.	
Highest single turbidity measurement during the year	
Number of violations of any surface water treatment requirements	

- (a) A required process intended to reduce the level of a contaminant in drinking water.
- (b) Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.

Summary Information for Violation of a Surface Water TT

VIOLATION OF A SURFACE WATER TT				
TT Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language

Summary Information for Operating Under a Variance or Exemption

Correctional Training Facility only utilized Ground Water

Summary Information for Federal Revised Total Coliform Rule Level 1 and Level 2 Assessment Requirements

Level 1 or Level 2 Assessment Requirement not Due to an *E. coli* MCL Violation

Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter

the drinking water distribution system. We found coliforms indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct assessment(s) to identify problems and to correct any problems that were found during these assessments.

During the past year we were required to conduct **[INSERT NUMBER OF LEVEL 1 ASSESSMENTS]** Level 1 assessment(s). **[INSERT NUMBER OF LEVEL 1 ASSESSMENTS]** Level 1 assessment(s) were completed. In addition, we were required to take **[INSERT NUMBER OF CORRECTIVE ACTIONS]** corrective actions and we completed **[INSERT NUMBER OF CORRECTIVE ACTIONS]** of these actions.

During the past year **[INSERT NUMBER OF LEVEL 2 ASSESSMENTS]** Level 2 assessments were required to be completed for our water system. **[INSERT NUMBER OF LEVEL 2 ASSESSMENTS]** Level 2 assessments were completed. In addition, we were required to take **[INSERT NUMBER OF CORRECTIVE ACTIONS]** corrective actions and we completed **[INSERT NUMBER OF CORRECTIVE ACTIONS]** of these actions.

Level 2 Assessment Requirement Due to an *E. coli* MCL Violation

E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely-compromised immune systems. We found *E. coli* bacteria, indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct assessment(s) identify problems and to correct any problems that were found during these assessments.

We were required to complete a Level 2 assessment because we found *E. coli* in our water system. In addition, we were required to take **[INSERT NUMBER OF CORRECTIVE ACTIONS]** corrective actions and we completed **[INSERT NUMBER OF CORRECTIVE ACTIONS]** of these actions.
