**WE KEEP LIFE FLOWING®**

# What is a Consumer Confidence Report (CCR)

Once again, we proudly present our Annual Water Quality Report, also referred to as a Consumer Confidence Report (CCR). CCRs let consumers know what contaminants, if any, were detected in their drinking water as well as related potential health effects. CCRs also include details about where your water comes from and how it is treated. Additionally, they educate customers on what it takes to deliver safe drinking water and highlight the need to protect drinking water sources.

We are committed to delivering high quality drinking water service. To that end, we remain vigilant in meeting the challenges of source water protection, water conservation, environmental compliance, sustainability and community education while continuing to serve the needs of all our water users.

This report contains important information about your drinking water. Translate it, or speak with someone who understands it at 1-888-237-1333.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien al 1-888-237-1333.

Ntawm no yog ib co lus qhia tseem ceeb heev txog koj cov dej seb huv npaum li cas. Yog tias koj xav tau kev pab txhais cov lus qhia no, thov hu rau peb ntawm 1-888-237-1333.

這是關於您的水質的十分重要的資訊。如果您需要幫助翻譯此資訊請致電 **1-888-237-1333** 與我們聯繫。

आपके पानी की गुणवत्ता के बारे में यह बहुत महत्वपूर्ण सूचना है। यदि इस सूचना के अनुवाद के लिए आपको सहायता की जरूरत हो, तो कृपया **1-888-237-1333** र हमें काल करें।

**Это очень важная информация о качестве Вашей воды. Если Вам требуется перевод этой информации, позвоните нам по телефону 1-888-237-1333.**

Ito ay isang napakahalagang impormasyon tungkol sa kalidad ng iyong tubig. Kung iyong kailangan ng tulong sa pagsalin ng impormasyon na ito, mangyaring tumawag sa amin sa 1-888-237-1333.

Đây là thông tin rất quan trọng về chất lượng nước của quý vị. Nếu quý vị cần thông dịch thông tin này, xin gọi chúng tôi theo số 1-888-237-1333.

# A message from California American Water's President

**KEVIN TILDEN**

President  
California American Water

Dear California American Water Customer,

At California American Water, our highest priority is making sure you can have confidence in the water you use to cook, bath, clean and serve your family. Most people take their water quality for granted in the United States and expect clean water to be always available. I am very proud of our employees who work hard and worry about water quality so that you do not have to. We have rigorous safeguards in place to help provide water to you that meets or surpasses increasingly stringent water quality standards.

Across California, we conducted approximately 650 distinct types of tests on more than 25,000 water samples for nearly 3,000 constituents last year. We are proud and pleased to confirm that those tests showed that we met every primary and secondary state and federal water quality standard.

**IMPROVING INFRASTRUCTURE:** Last year, we invested more than \$130 million in water infrastructure in the California communities we serve. This investment helps maintain the safety and reliability of the facilities and technology needed to draw, treat, and distribute water. This investment also helps bolster our conservation efforts and strengthen our wildfire resiliency across the state.

**VALUE:** While costs to provide water service continue to increase across the country, our investments help us provide high quality water service that remains an exceptional value for such an essential service. We also have great conservation programs to help you reduce your bill, and low-income assistance for those in need.

If you have any questions or concerns, you can contact us by phone, email or online at [www.californiaamwater.com](http://www.californiaamwater.com).

Please take the time to review this report as it provides details about the source and quality of your drinking water, using data from water quality testing conducted for your local system between January and December 2023.

We take our duty of being your water provider seriously and are proud of the results you will read about in the attached report.

Kevin Tilden  
California American Water

**This report contains important information about your drinking water. Translate it or speak with someone who understands it at (888) 237-1333, Monday-Friday, 7 a.m. to 7 p.m.**

## **ATTENTION: Landlords and Apartment Owners**

**Please share a copy of this notice with your tenants. It includes important information about their drinking water quality.**

Mark of  
Excellence

### EVERY STEP OF THE WAY.

Our team monitors and tests your water at multiple points throughout our process of drawing it from its source, treating it to meet drinking water standards, and distributing it through our pipeline systems. **In fact, American Water performs over one million tests annually for about 100 regulated contaminants, nationwide.**

### EXPERTISE. RECOGNIZED AT THE HIGHEST LEVEL.

American Water is an expert in water quality testing, compliance and treatment and has established industry-leading water testing facilities. Our dedicated team of scientists and researchers are committed to finding solutions for water quality challenges and implementing new technologies. American Water is recognized as an industry leader in water quality and works cooperatively with the EPA so that drinking water standards and new regulations produce benefits for customers and public water suppliers. American Water has earned awards from the EPA's Partnership for Safe Water as well as awards for superior water quality from state regulators, industry organizations, individual communities, and government and environmental agencies.

### WATER QUALITY. DOWN TO A SCIENCE.

Our team also has access to American Water's Central Laboratory in Belleville, Illinois, which conducts sophisticated drinking water testing and analysis. American Water scientists refine testing procedures, innovate new methods, and set new standards for detecting potentially new contaminants—even before regulations are in place.

### MAINTAINING QUALITY FOR FUTURE GENERATIONS.

Just as California American Water is investing in research and testing, we also understand the importance of investing in the infrastructure that provides high-quality water service to you. Last year alone, **we invested more than \$130 million to improve our water and wastewater treatment and pipeline systems.**

# About Your Drinking Water Supply

## WHERE YOUR WATER COMES FROM

The Fruitridge Vista water system is served by deep wells that pump groundwater from aquifers in the Sacramento Valley and supplemented with surface water purchased from the City of Sacramento. The water from the City of Sacramento originates from the American and Sacramento Rivers.

An assessment of the drinking water sources in the Fruitridge Vista system was completed in June 2003. The sources are considered most vulnerable to the following: automobile gas stations (active/historic), underground storage tanks (confirmed leaking tanks), and known contaminant plums. Fruitridge Vista sources are considered most vulnerable to the following activities not associated with any detected contaminants: sewer collection systems, chemical/petroleum pipelines, automobile gas stations/repair shops/body shops/machine shops, underground storage tanks (confirmed leaking tanks), photo processing/printing, and known contaminant plums. A copy of the completed assessment may be viewed at: California American Water, 4701 Beloit Drive, Sacramento, CA 95838.

Assessments of potential contaminating activities for the City's Sacramento River and American River water sources were completed in December 2010 and December 2008, respectively. These reports indicated that both rivers are most vulnerable to contaminants from recreational activities, urban runoff, and industrial discharge, and that the Sacramento River is vulnerable to agricultural contaminants. A copy of the complete assessment is available for review in the City Clerk's office at City Hall or call (916) 808-5011 to request a summary of the assessments

## SOURCE OF SUPPLY FOR THE SYSTEM

- Groundwater
- Purchased Water

## QUICK FACTS ABOUT THE FRUITRIDGE VISTA SYSTEM

**Communities served:**  
Fruitridge Manor, Cordova

**Water source:**  
Groundwater wells; purchased surface water from the City of Sacramento.

**Water Treatment:**  
California American Water uses various drinking water treatment technologies to treat the groundwater used in the Fruitridge Vista system including granular activated carbon (GAC) to remove low levels of organic chemical contaminants, iron and manganese removal, and chlorination for disinfection.

City of Sacramento surface water supplies are treated by conventional treatment technologies including coagulation, sedimentation and filtration (using sand and anthracite filters), lime addition for corrosion control, fluoridation to promote dental health, and chlorination for disinfection.

# What are the Sources of Contaminants?

To provide tap water that is safe to drink, EPA and the State Water Resources Control Board prescribe regulations which limit the amount of certain contaminants in water provided by public water systems. U.S. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about

contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, aquifers and/or groundwater. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

**SPECIAL HEALTH INFORMATION**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

## CONTAMINANTS THAT MAY BE PRESENT IN SOURCE WATER INCLUDE:

<b>Microbial Contaminants</b>	such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
<b>Inorganic Contaminants</b>	such as salts and metals, which can be naturally occurring or may result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
<b>Pesticides and Herbicides</b>	which may come from a variety of sources, such as agriculture, urban storm water runoff, and residential uses.
<b>Organic Chemical Contaminants</b>	including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and may also, come from gas stations, urban storm water runoff, and septic systems.
<b>Radioactive Contaminants</b>	which can be naturally occurring or may be the result of oil and gas production and mining activities.

# Protecting Your Drinking Water Supply

Protecting drinking water at its source is an important part of the process to treat and deliver high quality water. It takes a community effort to protect our shared water resources. This includes utilities, businesses, residents, government agencies and organizations. Everyone who lives, works, and plays in the area has a role and stake in clean water supplies.

## WHAT CAN YOU DO?

Quality drinking water starts upstream. Everyone can help maintain and improve drinking water supplies through the following actions:

- Properly dispose of pharmaceuticals, household chemicals, oils and paints. Materials can impact water ways if poured down the drain, flushed down the toilet, or dumped on the ground.
- Check for leaks from automobiles and heating fuel tanks. Clean up any spills using an absorbent material like cat litter. Sweep up the material and put it in a sealed bag. Check with the local refuse facility for proper disposal.
- Clean up after your pets and limit the use of fertilizers and pesticides.
- Take part in watershed activities.

**Report any spills, illegal dumping or suspicious activity to California Governor's Office of Emergency Services (Cal OES) Warning Center here: (800) 852-7550**

## FOR MORE INFORMATION

To learn more about your water supply and local activities, visit us online at [californiaamwater.com](http://californiaamwater.com) or contact the regional Source Water Protection Lead, Shilpa Singh at 916-568-4221.

## WHAT ARE WE DOING?

**Here are a few of the efforts underway to protect our shared water resources:**

**Community Involvement:** We have a proactive public outreach program to help spread the word and get people involved. This includes school education, contests, and other community activities.

**Environmental Grant Program:** Each year, we fund projects that improve water resources in our local communities.

# About Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. American Water is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

## UTILITY-OWNED VS. CUSTOMER-OWNED PORTION OF THE SERVICE LINE

Please note: This diagram is a generic representation. Variations may apply.

## The most common source of lead in tap water is from the customer's plumbing and their service line.

Our water mains are not made of lead; however, the water service line that carries the water from the water main in the street to your home could be. Homeowners' service lines may be made of lead, copper, galvanized steel or plastic. You can assess your service line material where it enters your home, typically in your basement, crawl space or garage, near the inlet valve.

### MINIMIZING YOUR POTENTIAL EXPOSURE

You cannot see, smell or taste lead, and boiling water will not remove lead. Here are steps you can take to reduce your potential exposure if lead exists in your home plumbing.

### CHECK YOUR PLUMBING AND SERVICE LINE

If you live in an older home, consider having a licensed plumber check your plumbing for lead. If your service line is made of lead, and you're planning to replace it, be sure to contact us at 1-888-237-1333.

**1. Flush your taps.** The longer the water lies dormant in your home's plumbing, the more lead it might contain. If the water in your faucet has gone unused for more than six hours, flush the tap with cold water for 30 seconds to two minutes before drinking or using it to cook. To conserve water, catch the running water and use it to water your plants.

**2. Use cold water for drinking and cooking.** Hot water has the potential to contain more lead than cold water. If hot water is needed for cooking, heat cold water on the stove or in the microwave.

**3. Routinely remove and clean all faucet aerators.**

**4. Look for the "Lead Free" label** when replacing or installing plumbing fixtures.

**5. Follow manufacturer's instructions for replacing water filters** in household appliances, such as refrigerators and ice makers, as well as home water treatment units and pitchers. Look for NSF 53 certified filters.

**6. Flush after plumbing changes.** Changes to your service line, meter, or interior plumbing may result in sediment, possibly containing lead, in your water supply. Remove the strainers from each faucet and run the water for 3 to 5 minutes.

# Determining Your Service Line Material

Homeowners' service lines are most commonly made of lead, copper, galvanized steel or plastic. Homes built before 1930 are more likely to have lead plumbing systems.

## There are different ways that you can determine if you have a lead service line.

- You can access your service line material where it enters your home, typically in your basement, crawl space or garage, near the inlet valve and identify the pipe material using the chart on the right.
- A licensed and insured plumber can inspect your pipes and plumbing.
- Lead test kits can be purchased at local hardware and home improvement stores. These kits are used to test paint, but can also be used to test pipe – not the water inside. Look for an EPA recognized kit. Wash your hands after inspecting plumbing and pipes.

## TYPES OF PIPE

	<ul style="list-style-type: none"><li>• Galvanized: A dull, silver-gray color. Use a magnet - strong magnets will typically cling to galvanized pipes.</li></ul>
	<ul style="list-style-type: none"><li>• Copper: The color of a copper penny.</li></ul>
	<ul style="list-style-type: none"><li>• Plastic: Usually white, rigid pipe that is jointed to water supply piping with a clamp. Note: It can be other colors, including blue and black.</li></ul>
	<ul style="list-style-type: none"><li>• Lead: A dull, silver-gray color that is easily scratched with a coin. Use a magnet - strong magnets will <u>not</u> cling to lead pipes.</li></ul>

## YOUR SERVICE LINE MATERIAL

Please note if your service lines contain lead, it does not mean you cannot use water as you normally do. California American Water regularly tests for lead in drinking water and our water meets state and federal water quality regulations, including those set for lead.

For more information on lead in drinking water, please visit <https://www.amwater.com/caaw/Water-Quality-Wastewater-Information/Lead-and-Drinking-Water>

# Important Information About **Drinking Water**

## **NITRATES**

Nitrate in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in serious illness. Symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant or you are pregnant, you should ask for advice from your health care provider.

## **ARSENIC**

While your drinking water meets the federal and state standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The U.S. Environmental Protection Agency continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

## **FLUORIDE**

Fluoride is a naturally occurring substance. It can be present in drinking water from two sources:

1. **By nature** when groundwater comes into contact with fluoride-containing minerals naturally present in the earth; or
2. **By a water purveyor** through addition of fluoride to the water they are providing in the distribution system.

The Fruitridge Vista system does not fluoridate its water but purchases fluoridated surface water from the City of Sacramento. The fluoride levels are adjusted by City of Sacramento to achieve an optimal fluoride level of 0.7 parts per million (ppm) and a control range of 0.6 ppm to 1.2 ppm to comply with the state's Water Fluoridation Standards. If you have any questions on fluoride, please call California American Water's Customer Service Center at (888) 237-1333

## Water Quality Results

### **WATER QUALITY STATEMENT**

We are pleased to report that during calendar year 2023, the results of testing of your drinking water complied with all state and federal drinking water requirements.

For your information, we have compiled a list in the table below showing the testing of your drinking water during 2023. The Division of Drinking Water allows us to monitor for some contaminants less than once per year because the concentration of the contaminants does not change frequently. Some of our data, though representative, are more than one year old.

# Definition of Terms

These are terms that may appear in your report.

**Action Level (AL):** The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements, that a water system must follow.

**DDW:** Division of Drinking Water

**Level 1 Assessment:** A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

**Level 2 Assessment:** A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

**LRAA:** Locational Running Annual Average

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. Secondary MCLs (SMCL) are set to protect the odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of disinfectant allowed in drinking water. There is

convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**MFL:** Million fibers per liter.

**micromhos per centimeter ( $\mu\text{mhos/cm}$ ):** A measure of electrical conductance.

**NA:** Not applicable

**N/A:** No data available

**ND:** Not detected

**Nephelometric Turbidity Units (NTU):** Measurement of the clarity, or turbidity, of the water.

**Notification Level (NL):** The concentration of a contaminant, which, if exceeded, requires notification to DDW and the consumer. Not an enforceable standard.

**pH:** A measurement of acidity, 7.0 being neutral.

**picocuries per liter (pCi/L):** Measurement of the natural rate of disintegration of radioactive contaminants in water (also beta particles).

**parts per billion (ppb):** One part substance per billion parts water, or micrograms per liter.

**parts per million (ppm):** One part substance per million parts water, or

milligrams per liter.

**parts per trillion (ppt):** One part substance per trillion parts water, or nanograms per liter.

**Primary Drinking Water Standard (PDWS):** MCLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California EPA.

**RAA:** Running Annual Average

**Secondary Maximum Contaminant Level (SMCL):** Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**SWRCB:** State Water Resources Control Board

**TON:** Threshold Odor Number

**Total Dissolved Solids (TDS):** An overall indicator of the amount of minerals in water.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**Variances and Exemptions:** State or EPA permission not to meet an MCL or utilize a treatment technique under certain conditions.

%: Percent

## MEASUREMENTS

### Parts Per Million

in a 10 gallon fish tank

### Parts Per Billion

in a 10,000 gallon swimming pool

### Parts Per Trillion

in 35 junior size Olympic pools

# Water Quality Results

California American Water conducts extensive monitoring to determine if your water meets all water quality standards. The detections of our monitoring are reported in the following tables. While most monitoring was conducted in 2023, certain substances are monitored less than once per year because the levels do not change frequently. For help with interpreting the tables below, see the "Definition of Terms" on the previous page. Some unregulated substances are measured, but maximum contaminant levels have not been established by the government. These contaminants are shown for your information.

**NOTE: Regulated contaminants not listed in this table were not found in the treated water supply.**

## LEAD AND COPPER MONITORING PROGRAM - At least 30 tap water samples collected at customers' taps every 3 years

Substance (with units)	Year Sampled	Compliance Achieved	PHG	Action Level (AL)	90 <sup>th</sup> Percentile	No. of Premises Sampled	Premises Above Action Level	Typical Source
Lead (ppb)	2021	Yes	0.2	15	ND	31	0	Corrosion of household plumbing systems.
Copper (ppm)	2021	Yes	0.3	1.3	0.09	31	0	Corrosion of household plumbing systems.

## DISINFECTION BYPRODUCTS - Collected in the Distribution System

Substance (with units)	Year Sampled	Compliance Achieved	MRDLG (MCLG)	MCL	Highest LRAA	Range Detected	Typical Source
Total Trihalomethanes (TTHMs) (ppb)	2023	Yes	NA	80	23	ND to 73.1	By-product of drinking water disinfection.
Haloacetic Acids (HAA5s) (ppb)	2023	Yes	NA	60	16	ND to 63.9	By-product of drinking water disinfection.

NOTE: Compliance is based on the running annual average at each location (LRAA). The Highest LRAA reflects the highest average at any location and the Range Detected reflects all samples used to calculate the running annual average.

## DISINFECTANTS - Collected in the Distribution System

Substance (with units)	Year Sampled	Compliance Achieved	MRDLG	MRDL	Minimum Chlorine Residual	Compliance Result <sup>2</sup>	Range Detected	Typical Source
Distribution System Chlorine Residual (ppm) <sup>1</sup>	2023	Yes	4	4	0.73	0.77	0.73 to 0.82	Water additive used to control microbes.

1 - Data represents the average of chlorine residuals measured throughout the distribution system.

2 - Data represents the highest running annual average.

## TREATMENT BYPRODUCTS PRECURSOR REMOVAL - Collected at the Treatment Plant (City Of Sacramento)

Substance (with units)	Year Sampled	Compliance Achieved	MCLG	MCL	Range of % Removal Required	Range of % Removal Achieved	Range Detected <sup>3</sup>	Typical Source
Total Organic Carbon (TOC) (ppm)	2023	Yes	NA	TT	N/A	N/A	1.5 to 1.8	Naturally present in the environment.

3 - Source water TOC less than 2.0 mg/L used as alternative criteria to exempt from removal ratio requirements for surface water sources. Values given represents maximum running annual average of any quarter during 2023 for each source.

**TURBIDITY - Continuous Monitoring at the Treatment Plant (City Of Sacramento)**

Substance (with units)	Year Sampled	Compliance Achieved	MCLG	MCL	Highest Single Measurement and Lowest Monthly % of Samples ≤0.3 NTU	Sample Date of Highest and Lowest Compliance Result	Typical Source
Turbidity (NTU)	2023	Yes	0	TT: Single result >1 NTU	0.24	N/A	Soil runoff.
	2023	Yes	NA	TT: At least 95% of samples ≤0.3 NTU	100%	N/A	Soil runoff.

**PRIMARY REGULATED SUBSTANCES – Collected at the Treatment Plant Effluent and/or Sources**

Substance (with units)	Year Sampled	Compliance Achieved	MCL	PHG (MCLG)	Fruitridge Vista		City of Sacramento		Typical Source
					Average Compliance Result	Range Detected	Average Compliance Result	Range Detected	
Arsenic (ppb)	2021, 2023	Yes	10	0.004	3.9	2.0 to 8.0	ND	ND	Erosion of natural deposits; runoff from orchards; Glass, and electronics production wastes
Barium (ppm)	2021, 2023	Yes	1	2	0.1	ND to 0.2	ND	ND	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits.
Nitrate (as nitrogen) (ppm)	2023	Yes	10	10	3.6	ND to 6.9	ND	ND	Runoff from fertilizer use; industrial or domestic wastewater discharges; erosion of natural deposits
Gross Alpha Particle Activity (pCi/L) <sup>4</sup>	2016-2023	Yes	15	(0)	3.0	ND to 9.2	ND	ND	Erosion of natural deposits
Uranium (pCi/L) <sup>5</sup>	2021-2023	Yes	20	0.43	4.7	1.6 to 8.4	ND	ND	Erosion of natural deposits
Tetrachloroethylene [PCE] (ppb)	2022-2023	Yes	5	0.06	0.4	ND to 2.3	N/A	N/A	Discharge from factories, dry cleaners, and auto shops (metal degreaser)
Trichloroethylene [TCE] (ppb)	2022-2023	Yes	5	1.7	0.1	ND to 0.8	N/A	N/A	Discharge from metal degreasing sites and other factories
Fluoride (ppm) <sup>6</sup>	2021-2023	Yes	2.0 (0.6 - 1.2) <sup>7</sup>	1	ND	ND	0.7	ND to 1.5	Water additive that promotes strong teeth

4 - Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.

5 - Some people who drink water containing uranium in excess of the MCL over many years may have kidney problems or an increased risk of getting cancer.

6 - Data collected in the distribution system.

7 - Fluoride Control Range, not an MCL. Information about fluoridation, oral health, and current issues is available from

[https://www.waterboards.ca.gov/drinking\\_water/certlic/drinkingwater/Fluoridation.html](https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.html)

**SECONDARY REGULATED SUBSTANCES – Collected at the Treatment Plant Effluent and/or Sources**

Substance (with units)	Year Sampled	Compliance Achieved	SMCL <sup>8</sup>	Fruitridge Vista		City of Sacramento		Typical Source
				Average Compliance Result	Range Detected	Average Compliance Result	Range Detected	
<b>Chloride (ppm)</b>	2021, 2023	Yes	500	23.7	7.4 to 47	2.9	ND to 5.8	Erosion or leaching of natural deposits
<b>Color (units)</b>	2021, 2023	Yes	15	0.71	ND to 5	ND	ND to 5	Naturally occurring organic materials
<b>Manganese (ppb)</b>	2021, 2023	Yes	50	0.78	ND to 58	N/A	N/A	Leaching from natural deposits
<b>Odor (TON)</b>	2021, 2023	Yes	3	0.1	ND to 1.0	ND	ND to 1.5	Naturally-occurring organic materials
<b>Specific Conductance (umhos/cm)</b>	2021, 2023	Yes	1600	384	180 to 740	114	67 to 162	Substances that form ions when in water; Seawater influence
<b>Sulfate (ppm)</b>	2021, 2023	Yes	500	16.8	3.0 to 39.1	11	4.9 to 17	Runoff/leaching from natural deposits; Industrial wastes
<b>Total Dissolved Solids (ppm)</b>	2021, 2023	Yes	1000	269	120 to 500	70	40 to 100	Runoff/leaching from natural deposits
<b>Turbidity (NTU)</b>	2021, 2022- 2023	Yes	5	0.2	0.1 to 4.7	ND	ND to 4.3	Soil runoff

8 - Substances with Secondary MCLs do not have MCLGs; these limits are primarily established to address aesthetic concerns

**OTHER SUBSTANCES OF INTEREST – Collected at the Treatment Plant Effluent and/or Sources**

Substance (with units)	Year Sampled	PHG (NL)	Fruitridge Vista		City of Sacramento		Comments
			Average Detected	Range Detected	Average Detected	Range Detected	
Total Alkalinity as CaCO <sub>3</sub> (ppm)	2021, 2023	N/A	135	60 to 280	33	17 to 49	Capacity of water to resist acidification
Calcium (ppm)	2021, 2023	N/A	42	19 to 78	12.8	8.5 to 17	
Magnesium (ppm)	2021, 2023	N/A	20	10 to 39	3.0	1.1 to 4.9	
pH	2021, 2023	N/A	7.7	7.2 to 8.1	N/A	N/A	pH is a measure of the acid/base properties of water.
Sodium (ppm)	2021, 2023	N/A	18.7	15.2 to 23.8	4.0	1.4 to 6.6	“Sodium” refers to the salt present in the water and is generally naturally occurring.
Total Hardness as CaCO <sub>3</sub> (ppm)	2021, 2023	N/A	161	74 to 330	44	26 to 61	"Hardness" is the sum of polyvalent cations present in the water, generally magnesium and calcium. The cations are usually naturally occurring
Total Hardness as CaCO <sub>3</sub> (grains/gallon)	2021, 2023	N/A	9.4	4.3 to 19.3	2.5	1.5 to 3.6	
Aggressive Index	2021, 2023	N/A	11.2	6.5 to 12.3	N/A	N/A	An indicator of the corrosivity of water
Hexavalent Chromium (ppb) <sup>9</sup>	2021, 2023	N/A	4.0	ND to 6.7	ND	ND	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits
Strontium (ppb)	2021, 2023	N/A	414	300 to 700	N/A	N/A	Naturally-occurring elemental metal; largely used in aluminum alloy production. Essential dietary element.
Vanadium (ppb)	2021, 2023	(50)	12.1	ND to 20	N/A	N/A	The babies of some pregnant women who drink water containing vanadium in excess of the Notification Level may have an increased risk of developmental effects, based on studies in laboratory animals.
Dichlorodifluoromethane [Freon 12] (ppm)	2022-2023	(1)	0.038	ND to 0.6	N/A	N/A	Dichlorodifluoromethane exposures resulted in reduced body weight in rats.

9 – There is currently no MCL for hexavalent chromium. The previous MCL of 10 ug/L was withdrawn on September 11, 2017.

## UNREGULATED CONTAMINANT MONITORING

Unregulated contaminants are those for which the EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist the EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is necessary. Every five years, the EPA issues a new list of no more than 30 unregulated contaminants to be monitored.

UNREGULATED CONTAMINANT MONITORING (UCMR4 - 2018 TO 2020 PERIOD)							
Parameter (with units)	Year Sampled	PHG (NL)	Fruitridge Vista		City Of Sacramento		Typical Source/Notes
			Average Result	Range Detected	Average Result	Range Detected	
Manganese (ppb)	2018-2020	( 500 )	8.4	ND to 32	0.4	ND to 0.8	Leaching from natural deposits
HAA5 (ppb)	2018-2020	MCL=60	20.8	ND to 30	24.1	4.2 to 35	By-product of drinking water disinfection
HAA6Br (ppb)	2018-2020	N/A	2.9	ND to 5.6	3.4	1.0 to 7.8	By-product of drinking water disinfection
HAA9 (ppb)	2018-2020	N/A	23.2	ND to 34	27	5.0 to 38	By-product of drinking water disinfection

In 2024, sampling for the next series of unregulated contaminants as required by EPA's Fifth Unregulated Contaminant Monitoring Rule (UCMR 5) that includes monitoring for 29 per- and polyfluoroalkyl substances (PFAS) analytes and lithium, began. As our customers, you have a right to know that we are performing this sampling and that these data will be available. If you are interested in examining the results, please contact Shilpa Singh at 916-568-4221. More information on the UCMR process is available at <https://www.epa.gov/dwucmr>

## About Us

**California American Water**, a subsidiary of American Water, provides high-quality and reliable water and/or wastewater services to nearly 700,000 people. For more information, visit [californiaamwater.com](http://californiaamwater.com) and follow us on Twitter, Facebook, Instagram and YouTube.

With a history dating back to 1886, **American Water (NYSE:AWK)** is the largest and most geographically diverse U.S. publicly traded water and wastewater utility company. The company employs more than 6,400 dedicated professionals who provide regulated and regulated-like drinking water and wastewater services to more than 14 million people in 24 states. American Water provides safe, clean, affordable and reliable water services to our customers to help keep their lives flowing.

## CALIFORNIA AMERICAN WATER FACTS AT A GLANCE

- **COMMUNITIES SERVED**  
78 communities in  
10 counties
- **PEOPLE SERVED**  
Approx 700,000 people
- **EMPLOYEES**  
322
- **SYSTEM DELIVERY**  
122 million gallons per day (MGD) of  
water is produced and treated
- **MILES OF PIPELINE**  
2,280 miles of water pipeline  
and 48.5 miles of wastewater pipe
- **STORAGE**  
185 water storage facilities

# How to Contact Us

If you have any questions about this report, your drinking water, or service, please contact California American Water's Customer Service Center Monday to Friday, 7 a.m. to 7 p.m. at 1-888-237-1333.
