

2023 Consumer Confidence Report

The Valley of Enchantment Mutual Water District (VOE) is pleased to provide you with the 2023 Consumer Confidence Report. We want to keep you informed about the quality of your drinking water, detected contaminants and possible health risks. We believe these regulations are very important and we make every effort to present this detailed information in a simple manner. We encourage you to read this report and if you have any questions, please feel free to contact, Brian Smith General Manager at (909) 338-2310. The information in this report is also submitted to the California Water Resource Control Board Water Division (SRWQCB). They monitor our compliance for all water quality regulatory standards to assure safe drinking water is consistently delivered to your tap.

SOURCES OF WATER

As a VOE customer, tap water comes from two different sources: groundwater (VOE wells) and surface water from Silverwood Lake via Crestline-Lake Arrowhead Water Agency (CLAWA) connections. A total of 21 wells are utilized as our groundwater sources. The Water District has completed Source Water Assessments on our drinking water wells. Completed Source Water Assessments may be visited <http://www.cdph.ca.gov/certlic/drinkingwater/Pages/default.aspx>.

CONTAMINANT HEALTH RISK INFORMATION

VOE has listed the following as a health risk informational guide only. Health risk assessments are based upon exceeding a Maximum Contaminant Level (MCL).

- The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through ground, it dissolves naturally-occurring minerals and in some cases, radioactive material, and can pick up substances from the presence of animals, or from human activity.
- Contaminants that may be present in source water include:
 - Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
 - Inorganic contaminants, such as salts and metals that can be naturally-occurring or results from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
 - Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
 - Organic contaminants, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.
 - Radioactive contaminants that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that the tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the California Department of Public Health (CDPH) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

SUMMARY OF INFORMATION FOR CONTAMINANTS THAT EXCEEDED AN MCL

In 2023 VOE's tap water met all EPA and State drinking water health standards. VOE vigilantly safeguards its water supplies and once again, we are proud to report that our system had not violated a maximum contaminant level or any other water quality standard.

PUBLIC MEETINGS

Regular public meetings of the VOE Board of Directors are generally held on the third (3rd) Monday of each month at 4:00 pm. If you wish to attend a meeting, please call the office during normal working hours at (909) 338-2310.

DEFINITIONS

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCL's are set as close to the PHG's (or MCLG's) as is economically and technologically feasible.

Secondary MCL's: are set to protect the odor, taste and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLG's are set by the U.S. EPA.

Public Health Goal (PHG): the level of a contaminant in drinking water below which there is no known or expected risk to health. PPHG's are set by CDPH.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected risk to health, MRDLG's are set by the U.S. EPA.

Primary Drinking Water Standard or PDWs: MCLs for contaminants that affects health along with their monitoring and reporting requirements, and water treatment requirements.

Picocuries per Liter (pCi/L): Measure of the radioactivity in water.

Nephelometric Turbidity Unit (NTU): A measure of clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

VOE WATER DISTRICT 2022 CONSUMER CONFIDENCE REPORT								
Drinking Water Contaminants Detected Between January 1, 2022 to December 31, 2022								
PARAMETER	UNITS	State or Federal MCL (MRDL)	PHG (MCLG)	State DLR	Range Average	DISTRICT WELLS	CLAWA	Major Sources in Major Sources in Drinking Water
PRIMARY STANDARDS - Mandatory Health-Related Standards								
Heterotrophic Plate Count (HPC)	CFU/mL	TT	NA	NA	Range Average	ND-18 0.83	N/A N/A	Naturally present in the environment
INORGANIC CHEMICALS								
Fluoride	ppm	2	1	1	Range Average	- 0.14	0.12 - 0.17 0.14	Erosion of natural products
Nitrate (NO3-N)	ppm	45	45	0.2	Range Average	ND-5.6 3.1	0 - 0.43 0.13	Runoff and leaching from fertilizer use; Septic tank and sewage; natural deposit erosion
RADIOLOGICALS								
Gross Alpha Particle Activity	pCi/L	15	NA	1	Range Average	ND-10.4 1.98		Erosion of natural products
Uranium	pCi/L	20	0.43	1	Range Average	ND-13.2 1.67		Erosion of natural products
Radium 228 Particle Activity (a)	pCi/L	15	NA	1	Range Average	ND ND		Erosion of natural products
DISINFECTION BY-PRODUCTS								
Total Trihalomethanes (TTHM)	ppb	80	NA	0.5	Range Average	13 13	18.5 - 84.3 36.2	By-product of drinking water chlorination
Halooacetic Acids (HAA5)	ppb	60	NA	1	Range Average	ND ND	1.8 - 5.4 4.2	By-product of drinking water chlorination
LEAD AND COPPER								
Lead (b)	ppb	AL = 15	10	10	ND	0	N/A	House pipes internal corrosion; erosion of deposits; leaching from wood preservatives
Copper (b)	ppb	AL = 1,300	10	10	230	0	N/A	House pipes internal corrosion; erosion of deposits; leaching from wood preservatives
SECONDARY STANDARDS - Aesthetic Standards								
Total Dissolved Solids (TDS) ppm		1000	NA	NA	Range Average	170 170	270 - 380 314.38	Substances that form ions in water; seawater influence
Total Hardness	ppm	NS	NS	NA	Range Average	100 100	76 - 96 77.94	Runoff and leaching from fertilizer use;
Chloride	ppm	500	NA	100	Range Average	8.5 8.5	68 - 83 73.69	Runoff/leaching from natural deposits; seawater influence
Specific Conductance	umhos/cm	1600	NA	NA	Range Average	260 260		Substances that form ions in water; seawater influence
Sulfate (c)	ppm	500	NA	0.5	Range Average	1.4 - 15 7.3	65 - 80 70.25	Leaching from natural deposits; industrial wastes
Sodium	ppm	NS	NA	1	Range Average	1.3 1.3	71 - 87 77.94	Runoff/leaching from natural deposits
pH	pH units	NA	NA	NA	Range Average	7.96 7.96	7.9 - 8.4 8.13	

Abbreviations: CFU/ml = Colony-Forming Units per milliliter N= Nitrogen ppb = Parts Per Billion or Micrograms Per Liter (µg/L)
 DBP = Disinfection By Products N/A = Not Analyzed ppm = Parts Per Million or Milligrams Per Liter (mg/L) DLR = Detection Limits for Purposes of Reporting NTU = Nephelometric Turbidity Units TT = Treatment Technique MCL = Maximum Contaminant Level pCi/L = picocuries Per Liter
 GW = Groundwater MRDL = Maximum Residual Disinfectant Level
