

# 2019 Consumer Confidence Report

Report Date: JUNE 2019

Water System Name:

Western Heights Water Company

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2018.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the calendar year 2018, we did not monitor for 1,2,3-trichloropropane (1,2,3-TCP) from Wells 10, 11, 12, and 14 during the third calendar quarter and therefore cannot be sure of the quality of your drinking water during that time.

Although the third quarter sample was missed, WHWC is sampling monthly for 1,2,3-TCP, which is over and above the monitoring requirements. The additional testing has shown no 1,2,3-TCP contamination in Wells 10, 11, 12, or 14. However, 1,2,3-TCP was detected in Well 2A. In response, WHWC temporarily placed Well 2A on inactive status to eliminate 1,2,3-TCP exposure while we work to install treatment to remove 1,2,3-TCP and return Well 2A to active service.

*Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.*

The sources of drinking water include five wells; 2A, 10, 11, 12 and 14 which are located within the Company's service boundaries and draw from Western Heights Water Company's Sub-basin Aquifer. The Company also receives 1,000 Acre-Feet per year through a connection with Yucaipa Valley Water District

Regular scheduled Board Meetings are at 8 a.m. on the third Friday of the month at the offices of Western Heights Water Company, 32352 Avenue D, Yucaipa, CA.

For more information, contact: Debbie Patrick, Office Manager at 909-790-1901

## TERMS USED IN THIS REPORT:

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

**Maximum Residual Disinfectant Level (MRDL):** The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLGs are set by the U.S. Environmental Protection Agency.

**Primary Drinking Water Standards (PDWS):** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

**Secondary Drinking Water Standards (SDWS):** MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Variances and Exemptions:** Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

**ND:** not detectable at testing limit  
**ppm:** parts per million or milligrams per liter (mg/L)  
**ppb:** parts per billion or micrograms per liter (ug/L)  
**ppt:** parts per trillion or nanograms per liter (ng/L)  
**pCi/L:** picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

## Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- **Pesticides and herbicides** that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- **Radioactive contaminants** that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resources Control Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

**Tables 1, 2, 3, 4, 5 and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent.** The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

**Additional General Information on Drinking Water.** Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

### **Source Water Assessment Information**

A source water assessment was conducted for Wells 2A, 10, 11, 12 and 14 of the Western Heights Water Company water system in August 2001. The Ground Water Sources are considered most vulnerable to the following activities associated with contaminants detected in the water supply; Nitrates below MCL's. A copy of the complete assessment may be viewed at Western Heights Water Company office or at State Water Resources Control Board, 464 West 4<sup>th</sup> Street, Suite 437, San Bernardino, CA 92401.

You may request a summary of the assessment be sent to you by contacting the State Water Resources District Engineer at (909)383-4328.

### **ATTENTION LANDLORDS:**

**The State Water Resources Control Board *requires* you to post or provide a copy of this Annual Water Quality / Consumer Confidence Report to all employees, tenants and water users at their location.**

TABLE 1 - SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA

Microbiological Contaminants (to be completed only if there was a detection of bacteria)	Highest No. of detections	No. of months in violation	MCL	MCL G	Typical Source of Bacteria
Total Coliform Bacteria	(In a mo.) 0	0	More than 1 sample in a month with a detection	0	Naturally present in the environment
Fecal Coliform or <i>E. coli</i>	(In the year) 0	0	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>	0	Human and animal fecal waste

TABLE 2 - SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER

Lead and Copper (to be completed only if there was a detection of lead or copper in the last sample set)	No. of samples collected	90 <sup>th</sup> percentile level detected	No. sites exceeding AL	AL	PHG	Typical Source of Contaminant
Lead (ppb)	35	ND	0	1	15	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	35	ND	0	0	1.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

TABLE 3 - SAMPLING RESULTS FOR SODIUM AND HARDNESS

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCL G)	Typical Source of Contaminant
Sodium (ppm)	05/30/2018	32	28 - 52	none	none	Generally found in ground & surface water
Hardness (ppm)	05/30/2018	184	150 – 250	none	none	Generally found in ground & surface water

TABLE 4 - DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Fluoride (ppm)	05/30/2018	0.508	0.35 – 0.62	2.0	1.0	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Nitrate as (NO <sub>3</sub> ) (ppm)	05/30/2018	4.42	5.8 – 30	45	45	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Hexavalent Chromium (ppb)	05/30/2018	6.02	ND – 7.8	10	.02	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits
Dibromochloropropane (DBCP) (ppb)	05/30/2018	0.044	ND - 0.27	200	1.7	Banned nematocide that may still be present in soils due to runoff/leaching from former use on soybeans, cotton, vineyards, tomatoes, and tree fruit
TTHMs [Total Trihalomethanes] (ppb)	05/30/2018		ND – 36	80	N/A	By product of drinking water disinfection
Total Haloacetic Acids (HAA5)	8/03/2015	1.76	ND – 7.64	60	N/A	By product of drinking water disinfection
1,2,3-Trichloropropane	4/10/18	0.043 Well 2a only				Past use of soil fumigants that contained 1,2,3-TP as an impurity

TABLE 5 - DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Chloride (ppm)	05/30/2018	12.62	10 – 55.6	500	None	Runoff/leaching from natural deposits; sea water influence.
Odor-Threshold	05/30/2018	1.0 units	1.0 units	3 units	None	Naturally occurring organic materials.
Total Dissolved Solids (TDS) (ppm)	05/30/2018	286	287 - 360	1000	None	Runoff/leaching from natural deposits.
Specific Conductance (ppm)	05/30/2018	484	430 – 550	1600	None	Substances that form ions when in water; seawater influence.
Sulfate (ppm)	05/30/2018	37.8	24.9 – 44	500	None	Runoff/leaching from natural deposits; industrial waste.

\*Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.
