

2018 Consumer Confidence Report  
DRINKING WATER

Water System Name:  
**Naval Air Station North Island (NASNI)**  
**&**  
**Naval Amphibious Base (NAB) Coronado**  
**#3710750**

Report Date:  
**01 July 2019**

*Naval Base Coronado tests the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2018 and may include earlier monitoring data.*

**Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Naval Air Station North Island (NASNI) & Naval Amphibious Base (NAB) Coronado System #3710750 a [anh.ngo@navy.mil](mailto:anh.ngo@navy.mil) para asistirlo en español.**

Where do we get our water from?

NASNI and NAB purchases water from the City of San Diego, which is treated at the Alvarado Treatment Plant. Water flows through a Navy-owned pipeline that supplies water to our distribution system at NASNI and NAB. We continuously monitor for water quality parameters at our storage tanks and boost with disinfectants to maintain drinking quality standards.

The City of San Diego imports a majority of its raw surface water supply from the San Diego County Water Authority. The Water Authority is a blend from the Colorado River and the State Water Project. Raw water sources can include rivers, lake, streams, ponds, reservoirs, springs, and wells.

**The sources of drinking water** (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

### How do I know it's safe?

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

The City of San Diego conducts compliance sampling at the Alvarado Treatment Plant and Naval Facilities Engineering Command (NAVFAC) Southwest Utilities conducts compliance sampling with the Naval Base Coronado (NBC) water distribution system for NASNI and NAB. There are 48 water sampling stations where we monitor water quality parameters as well as at our distribution and/or storage locations.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

### What about Lead?

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead that may be found in drinking water is primarily from materials and components associated with service lines and plumbing. Naval Base Coronado is responsible for providing high quality drinking water; however, there may be an unknown variety of materials used in plumbing components installed historically. The Reduction of Lead in Drinking Water Act went into effect on January 4, 2014. The Act has reduced the lead content allowed in water system and plumbing products by changing the definition of lead-free in Section 1417 of the Safe Drinking Water Act (SDWA) from not more than 8% lead content, to not more than a weighted average of 0.25% lead with respect to the wetted surfaces of pipes, pipe fittings, plumbing fittings, and plumbing fixtures. The SDWA prohibits the use of these products in the installation or repair of any public water system or facility providing water for human consumption if they do not meet the lead-free requirement. The installation is also conducting a lead service line inventory requirement and have not yet found any lead service lines as part of our investigation.

*Is lead-free certification required for products?* As of March 2015, there is no mandatory federal requirement for lead-free product testing or third-party certification under the Safe Drinking Water Act (SDWA).

### *How can I minimize exposure to lead?*

- **Flush.** It is always a good idea to flush your faucet at work and/or at home, especially when water has been sitting for several hours (i.e. overnight or over a weekend). You can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes prior to utilizing for consumption.
- **Use Cold Water.** Hot dissolves lead more quickly than cold water, so use cold water to prepare food and drinks.
- **Clean Your Aerator.** Debris can be trapped on the aerator screens on water outlets containing metals, especially if construction or plumbing work may have occurred in your area. Simply twist off the aerator, tap and clean any debris which may be caught on the filtration screen, and reinstall.
- Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <http://www.epa.gov/lead>.

### *What about at the Child Development Centers and Youth Centers?*

In the U.S., the Environmental Protection Agency (EPA) recommends, but does not require, testing for lead in drinking water in schools and day care centers. However, Navy policy requires the Lead in Priority Areas (LIPA) testing program in the best interest of all the children, parents, and staff we serve. This sampling is conducted every 5 years at all drinking water outlets. NBC will be conducting sampling in 2019. Once complete, testing results will be available at the Commander, Navy Region Southwest Web site at:

[https://www.cnrc.navy.mil/regions/cnrs/om/environmental\\_support/water\\_quality\\_information.html](https://www.cnrc.navy.mil/regions/cnrs/om/environmental_support/water_quality_information.html)

### Where can I get more information on drinking water?

City of San Diego produces an annual report detailing the sources of our water, where its purchased from, and how it is treated and delivered. This report is available online at <https://www.sandiego.gov/public-utilities/water-quality/water-quality-reports>. For more information on the sampling and monitoring that we conduct on base, please contact the Naval Base Coronado (NBC) Drinking Water Program Manager at 619-545-2724.

## TERMS USED IN THIS REPORT

**CSD MDL (City of San Diego Water Quality Lab method detection limit):** lowest quantifiable concentration of a measured analyte detectable by the lab

**DLR:** detection limit for reporting

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Nephelometric Turbidity Unit (NTU):** Unit of measure for the turbidity of water.

**ND:** not detectable at testing limit

**Primary Drinking Water Standards (PDWS):** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements. **Secondary Drinking Water Standards (SDWS):** MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**RAA:** Running annual average

**Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Variances and Exemptions:** Permissions from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.

**ppm:** parts per million or milligrams per liter (mg/L)

**ppb:** parts per billion or micrograms per liter (µg/L)

**ppt:** parts per trillion or nanograms per liter (ng/L)

**ppq:** parts per quadrillion or picogram per liter (pg/L)

**pCi/L:** picocuries per liter (a measure of radiation)

The water quality data for 2018 is summarized in the following tables. Data shown in brackets [example] is obtained from the City of San Diego monitoring. Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one-year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

**TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA**

Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of Months in Violation	MCL	MCLG	Typical Source of Bacteria
Total Coliform Bacteria (state Total Coliform Rule)	(In a month)	0	1 positive monthly sample	0	Naturally present in the environment
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	(In the year)	0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive	-	Human and animal fecal waste
<i>E. coli</i> (federal Revised Total Coliform Rule)	(In the year)	0	(a)	0	Human and animal fecal waste

(a) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

**TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER**

Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 <sup>th</sup> Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant
Lead (ppb)	August 2017	20	ND	0	15	0.2	n/a	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	August 2017	20	0.745	0	1.3	0.3	n/a	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

**TABLE 3 – SAMPLING RESULTS FOR SODIUM, HARDNESS, AND TURBIDITY**

Chemical or Constituent (and reporting units)	Sample Year	Level Detected (Average)	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	2018	[81.5]	[58.9 - 95.1]	None	None	Salt present in the water and is generally naturally occurring
Hardness (ppm)	2018	[224]	[151 - 292]	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring
Turbidity (NTU)	2018	[Max Level Found = 0.26]	[100% of samples ≤ 0.3]	TT=95% of samples ≤ 0.3	n/a	Soil runoff

**TABLE 4 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD**

Chemical or Constituent (and reporting units)	Sample Year	Level Detected (Average)	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
<i>DISINFECTANT RESIDUAL AND DISINFECTANT BY-PRODUCTS AND PRECURSORS</i>						
Chlorine Residual (ppm)	2018	1.32	0.06 – 3.4	4.0 As Cl <sub>2</sub>	4.0 As Cl <sub>2</sub>	Drinking water disinfectant added for treatment
Total Trihalomethanes (TTHM; ppb)	2018; quarterly	RAA = 26	14.0 – 30.0	80	N/A	By-product of drinking water disinfectant
Haloacetic Acids (HAA; ppb)	2018; quarterly	RAA = 7	4.8 – 9.9	60	N/A	By-product of drinking water disinfectant
Bromate (ppb)	2018	[ND]	[ND – 9.5]	10	0.1	By-product of drinking water disinfectant
Total Organic Carbon (TOC; ppm)	2018	[2.2]	[1.8 – 3.0]	TT	n/a	Various natural and manmade sources
<i>CHEMICAL PARAMETERS</i>						
Arsenic (ppb)	2018	[ND]	[ND – ND]	10	0.004	Erosion of natural deposits; glass and electronics production waste
Fluoride (naturally-occurring; ppm)	2018	[0.2]	[0.1 – 0.3]	2	1	Erosion of natural deposits
Fluoride (treatment-related; ppm)	2018	[0.5]	[0.2 – 0.7]	2	1	Water additive that promotes strong teeth; erosion of natural deposits
Nitrate (as N; ppm)	2018	[ND]	[ND – ND]	10	10	Runoff and leaching from fertilizer use; erosion of natural deposits
Nickel (ppb)	2018	[ND]	[ND – ND]	100	12	Runoff and leaching from fertilizer use; erosion of natural deposits
Selenium (ppb)	2018	[ND]	[ND – ND]	50	30	Erosion of natural deposits; refineries, mines, and chemical water discharge

RADIOACTIVE PARAMETERS						
Gross Alpha Particle Activity (pCi/L)	2018	[3.5]	n/a	15	0	Erosion of natural deposits
Gross Beta Particle Activity (pCi/L)	2018	[ND]	n/a	50*	0	Decay of natural and manmade deposits
Uranium (pCi/L)	2018	[2.1]	n/a	20	0.43	Erosion of natural deposits

\*Division of Drinking Water considers 50 pCi/L to be the level of concern for beta particles

**TABLE 5 – DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	CA SMCL	CSD MDL (DLR)	Typical Source of Contaminant
Aluminum (ppb)	2018	[ND]	[ND – ND]	200	(50)	Erosion of natural deposits; residue from some water treatment processes
Chloride (ppm)	2018	[91.9]	[71.1 – 106]	500	0.5	Runoff/leaching from natural deposits; seawater influence
Color (CU)	2018	[ND]	[ND – 1]	15	1	Naturally-occurring organic materials
Manganese (ppb)	2018	[ND]	[ND – ND]	50	(20)	Leaching from natural deposits
Odor-Threshold (OU)	2018	[ND]	[ND – 1]	3	(1)	Naturally-occurring natural deposits
Specific Conductance (µS/cm)	2018	[795]	[578 – 909]	1,600	n/a	Substances that form ions when in water; seawater influence
Sulfate (ppm)	2018	[153]	[73.0 – 216]	500	(0.5)	Runoff/leaching from natural deposits; industrial wastes
Total Dissolved Solids (ppm)	2018	[480]	[332 – 588]	1,000	10	Runoff/leaching from natural deposits
pH	2018	[7.95]	[7.23 – 8.43]	n/a	n/a	low pH: corrosion high pH: deposits

**TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Health Effects Language
Boron (ppm)	2018	[0.1]	[0.1 – 0.1]	1	Boron exposures resulted in decreased fetal weight (developmental effects) in newborn rats.
Chromium, hexavalent (ppb)*	2018	0.05	Single Sample	--	Studies show that Cr6 in drinking water may cause an increased risk of stomach cancer and reproductive harm.

\*The DLR of 1 ppb and the MCL of 10 ppb for Chromium VI were repealed in 2017. The PHG for Cr6 is 0.02ppb.

### Did You Know?

In 2004, the Institute of Medicine set the amount of water adults ages 19 to 30 years should drink, depending on climate, activity, pregnancy status, and health to:

Men: Average of 3.7 liters/day  
Women: Average of 2.7 liters/day.
