### **2021 Consumer Confidence Report**

Water System Name: DIEDE TRUCKING WATER SYSTEM

Report Date:

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2021.

# Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alquien que lo entienda bien.

**Type of water source(s) in use:** This info is not available, as this water system does not have a completed assessment on file. Please see the Drinking Water Source Assessment Information section located at the end of this report for more details.

#### Your water comes from 1 source(s): Well

**Primary Drinking Water Standards (PDWS):** MCLs and MRDLs for the contaminants that affect health along with their monitoring and reporting requirements, and

**Opportunities for public participation in decisions that affect drinking water quality:** Regularly-scheduled water board or city/county council meetings currently are not held.

For more information about this report, or any questions relating to your drinking water, please call (209)369-8255 and ask for Mike Mason or email <u>mikemason@diedesonstruction.com</u> or visit our website at <u>www.diedeconstruction.com</u>.

#### TERMS USED IN THIS REPORT Maximum Contaminant Level (MCL): The highest Treatment Technique (TT): A required process intended to reduce level of contaminant that is allowed in drinking water. the level of a contaminant in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically feasible. Secondary MCLs are set to Regulatory Action Level (AL): The concentration of a contaminant protect the odor, taste, and appearance of drinking which, if exceeded, triggers treatment or other requirements that a water. water system must follow. Maximum Contaminant Level Goal (MCLG): The Level 1 Assessment: A Level 1 assessment is a study of the water level of a contaminant in drinking water below which system to identify potential problems and determine (if possible) why there is no known or expected risk to health. MCLGs are total coliform bacteria have been found in our water system. set by the U.S. Environmental Protection Agency (USEPA). Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if Public Health Goal (PHG): The level of a contaminant possible) why an E. coli MCL violation has occurred and/or why total in drinking water below which there is no known or coliform bacteria have been found in our water system on multiple expected risk to health. PHGs are set by the California occasions. **Environmental Protection Agency. mg/L:** milligrams per liter or parts per million (ppm) Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. **ug/L:** micrograms per liter or parts per billion (ppb) There is convincing evidence that addition of a disinfectant is necessary for control of microbial **ppt:** parts per trillion or nanograms per liter (ng/L) contaminants. **pCi/L:** picocuries per liter (a measure of radiation) **Maximum Residual Disinfectant Level Goal** (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

water treatment requirements. **The sources of drinking water:** (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

April 2022

#### Contaminants that may be present in source water include:

- *Microbial contaminants,* such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants,* such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides,* that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products if industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants,* that can be naturally-occurring or be the result of oil and gas production and mining activities.

**In order to ensure that tap water is safe to drink,** the USEPA and the State Water Resource Control Board (State Water Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Water Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1 and 2 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Water Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Any violation of MCL, AL or MRDL is highlighted. Additional information regarding the violation is provided later in this report.

### **Additional General Information on Drinking Water**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts if some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with the service lines and home plumbing. *Diede Trucking Water System* is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <a href="http://www.epa.gov/lead">http://www.epa.gov/lead</a>.

### **2021 Consumer Confidence Report**

### **Drinking Water Assessment Information**

#### **Assessment Information**

A Drinking Water Source Assessment has not been completed for the WELL-WEST PROPORTY of the DIEDE TRUCKING WATER SYSTEM water system.

Well - does not have a completed Source Water Assessment on file.

#### **Discussion of Vulnerability**

Assessment summaries are not available for some sources. This is because:

The Assessment has not been completed. Contact the local Department of Health Services (DHS) Drinking Water field office or the water system to find out when the Assessment is scheduled to be done.

The source is not active. It may be out of service, or new and not yet in service.

The Assessment was not submitted electronically. The site used to obtain Assessments only provides access to Assessment summaries submitted electronically.

#### **Acquiring Information**

For more info you may visit http://swap.ice.ucdavis.edu/TSinfo/TSintro.asp or contact Diede Trucking Water System`s local health department at: San Joaquin County Environmental Health Department 600 E. Mian St. Stockton CA 95202 Phn: (209) 468-3420 Fax: (209) 464-0138 Office Userre Monday through Eriday, 2,00 c.m. to 5,00 n.m.

Office Hours: Monday through Friday, 8:00 a.m. to 5:00 p.m.
