Water Quality Report 2023

Nacimiento Water Project System Number 4010080

COUNTY SAN LUIS OBISPO Public Works will be a valued community partner enhancing quality of life for our fellow county residents.

Your 2023 Water Quality Report

The County of San Luis Obispo is pleased to present this annual report describing the quality of your drinking water. Included are details about where your water comes from, what it contains, and how it compares to State standards. We sincerely hope this report gives you the information you seek and have a right to know. *Este informe contiene informacíon muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.*

Your Water Supply

The raw water provided to your water agency comes from Nacimiento Reservoir located in northern San Luis Obispo County. The Nacimiento Reservoir watershed encompasses 208,060 acres (325 square miles). Nearly half of the watershed area, 104,480 acres, lies in Monterey County. The other half, 103,580 acres, lies in San Luis Obispo County.

The Nacimiento Water Project serves seven agencies with raw water from Nacimiento Reservoir – City of El Paso de Robles, Templeton Community Services District, Atascadero Mutual Water Company, SMR Mutual Water Company, City of San Luis Obispo, and both County Service Area 10A and Bella Vista Mobile Home Park in the Cayucos area, under a water exchange agreement with the City of San Luis Obispo for Whale Rock Reservoir water.

A watershed sanitary survey was initially conducted in 2011. Updates were conducted in 2015 and 2020. The survey identifies potential contaminating activities in the watershed and assesses their impact on the raw and treated water quality. The greatest risks to the Nacimiento Reservoir as a drinking water supply come from extensive grazing, unlimited body contact recreation, numerous domestic wastewater facilities, and the potential for a large wildland fire. Urban development and agricultural cropland are increasing and may present future risks. Variable risk levels are presented by military activities and illicit commercial crops.

COUNTY TESAN LUIS OBISPO

Nacimiento Water Project Consumer Confidence Report 2023

A special contaminant of concern is mercury from abandoned mercury mines in the watershed. Although mercury currently does not present a risk to the reservoir as a drinking water supply, its presence in the environment has led to its accumulation in fish in Nacimiento Reservoir at levels that are unsafe for human consumption. Public awareness of this issue can lead to concerns about the safety of the water supply.

Copies of the surveys can be found at the County of San Luis Obispo Department of Public Works website at:

https://www.slocounty.ca.gov/Departments/Public-Works/Forms-Documents/Water-Resources/Watershed-Sanitary-Surveys.aspx

Additional information

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural applications, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Water Quality

The following tables are a snapshot of water quality constituents that were detected in 2023 unless otherwise noted. Data in this table is from the collection of the Nacimiento Reservoir Inlet – Raw Water. Depending on the current water delivery status, this water could be collected from the pumping station (lake to delivery pipeline) or directly from the lake at the intake elevation the water would be drawn from. The presence of these substances in water does not necessarily indicate that the water poses a health risk. The Maximum Contaminant Level and Violation status are for treated Drinking Water and are used here to aid in treatment decisions of the raw water from the Nacimiento Water Project. The State allows us to monitor some constituents less than once yearly because the concentrations do not change frequently. Some of our data, although representative, may be more than one year old. For questions about this data, please contact the County of San Luis Obispo Department of Public Works Water Quality Laboratory at (805) 781-5111.

Microbiological Contaminants	Range of Detections	Average	MCL	PHG (MCLG)	Typical Source of Bacteria
Total Coliform (MPN/100 mL)	21 – 4900	690	TT	(1)	Naturally present in the environment
E. coli (MPN/100 mL)	1 - 6	2.8	TT	(0)	Human and animal fecal waste

Chemical Contaminants	Range of Detections	Average	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	6.3 – 7.2	6.7	None	None	Runoff/leaching from natural deposits
Hardness as CaCO3 (ppm)	88 - 96	92	None	None	Generally found in ground and surface water

Radioactivity	Sample Date	Range of Detections	Average	MCL	PHG (MCLG)	Typical Source of Contaminant
Gross Alpha Particle Activity (pCi/L)	2019	2.22 - 2.65	2.44	15	(0)	Erosion of natural deposits
Gross Beta Particle Activity (pCi/L)	2019	1.00	1.00	50	(0)	Decay of natural and man-made deposits

The Maximum Contaminant Level and Violation status are for treated Drinking Water and are used here to aid in treatment decisions of the raw water from the Nacimiento Water Project.

REGULATED CONTAMINANTS WITH PRIMARY DRINKING WATER STANDARDS							
Constituent (Units)	Range of Detections	Average	MCL	PHG (MCLG)	Typical Source of Contaminant		
Aluminum (mg/L)	0.12 – 0.76	0.28	1	0.6	Erosion of natural deposits		
Barium (mg/L)	0.026 - 0.032	0.030	1	2	Erosion of natural deposits		
Chromium (µg/L)	2.7 – 4.7	3.7	50	100	Erosion of natural deposits		
Cyanide (µg/L)	16	< 10	150	150	Erosion of natural deposits		
Fluoride (mg/L)	0.11	< 0.10	2.0	1	Erosion of natural deposits		
Lead (µg/L)	0.50 – 1.0	0.80	15	0.2	Erosion of natural deposits		
Total Organic Carbon (mg/L)	3.3 – 5.0	3.8	TT	NA	Various natural and manmade sources		

REGULATED CONTAMINANTS WITH SECONDARY DRINKING WATER STANDARDS							
Constituent (Units)	Range of Detections	Average	SMCL	PHG (MCLG)	Typical Source of Contaminant		
Aluminum (µg/L)	120 - <mark>760</mark>	280	200	None	Erosion of natural deposits		
Chloride (mg/L)	3 - 6	3.8	500	None	Runoff/leaching from natural deposits		
Color, Apparent (CU)	19 - 72	41	15	None	Naturally occurring organic materials		
Color, True (CU)	11 - 30	15	15	None	Naturally occurring organic materials		
Iron (μg/L)	230 - 1000	416	300	None	Leaching from natural deposits		
Manganese (µg/L)	10 - 130	29	50	None	Leaching from natural deposits		
Odor - Threshold (TON)	1.4 - <mark>4</mark>	2.2	3	None	Naturally occurring organic materials		
Specific Conductance (µS/cm)	200 - 420	270	1600	None	Substances that form ions when in water		
Sulfate (mg/L)	20 - 21	21	500	None	Runoff/leaching from natural deposits		
Total Dissolved Solids (mg/L)	140 - 150	145	1000	None	Runoff/leaching from natural deposits		
Turbidity (NTU)	4.9 - <mark>56</mark>	23	5	None	Soil runoff		

UNREGULATED CONTAMINANTS							
Constituent (Units)	Range of Detections	Average	Notification Level	Typical Source of Contaminant			
Alkalinity as CaCO3 (mg/L)	62 - 73	67	Unregulated	Runoff/leaching from natural deposits			
Boron (mg/L)	0.035 - 0.037	0.036	1	Runoff/leaching from natural deposits			
Calcium (mg/L)	18 - 22	21	Unregulated	Runoff/leaching from natural deposits			
Hardness as CaCO3 (mg/L)	88 - 96	92	Unregulated	Generally found in ground and surface water			
Magnesium (mg/L)	9.4 - 11	10	Unregulated	Runoff/leaching from natural deposits			
рН	7.28 – 8.54	7.40	Unregulated	Runoff/leaching from natural deposits			
Potassium (mg/L)	1.0 – 1.9	1.3	Unregulated	Runoff/leaching from natural deposits			
Sodium (mg/L)	6.3 – 7.2	6.7	Unregulated	Runoff/leaching from natural deposits			

Some additional constituents monitored in 2023, but not detected above State reporting limits: antimony, arsenic, beryllium, cadmium, copper, mercury, MBAS, nickel, nitrate, nitrite, perchlorate, selenium, silver, thallium, and zinc.

Some additional constituents monitored in 2021, but not detected above State reporting limits: volatile organic chemicals, and 1,2,3-Trichloropropane. Some additional constituents monitored in 2020, but not detected above State reporting limits: atrazine and simazine.

Some additional constituents monitored in 2019, but not detected above State reporting limits: asbestos.

KEY terms and abbreviations

CU - Color Units.

MBAS - Methylene Blue Active Substances; anionic surfactants such as foaming agents and detergents.

MCL - Maximum Contaminant Level. The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

MCLG – Maximum Contaminant Level Goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

mg/L - Milligrams per Liter.

μg/L - Micrograms per Liter.

MPN/100 mL - Most Probable Number per 100 milliliters

μS/cm – microsiemens per centimeter (unit of specific conductance of water).

ND – Not Detected. Contaminant is not detectable at testing limit.

NS - No Standard

NTU – Nephelometric Turbidity Unit. A measure of water clarity.

pCi/L - picocuries per liter (a measure of radioactivity).

PDWS – Primary Drinking Water Standards. MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements. PDWS pertain to the following: Filtration Performance, Microbiological Contaminants, Inorganic Contaminants, Radioactive

Contaminants and Disinfection Byproducts, Disinfection Residuals, and Disinfection Byproduct Precursors.

PHG - Public Health Goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

ppb - parts per billion, or micrograms per liter (µg/L).

ppm - parts per million, or milligrams per liter (mg/L).

Primary MCL - Maximum contaminant level for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible.

RAL – Regulatory Action Level. The concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.

Secondary MCLs – Maximum contaminant level for contaminants to protect the taste, odor, or appearance of the drinking water. Contaminants with secondary MCLs do not affect health at the MCL levels.

SWRCB - State Water Resources Control Board

TON - Threshold Odor Number.

TT - Treatment Technique. A required process intended to reduce the level of a contaminant in drinking water. For microbiological and turbidity contaminants, the raw water will be treated at a water treatment facility or used for groundwater recharge prior to use.

USEPA - United States Environmental Protection Agency

Drinking Water and Health Risks

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their healthcare providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead Health Risks in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water typically comes from materials and components associated with service lines and home plumbing. The County of San Luis Obispo is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at http://www.epa.gov/safewater/lead

State Revised Total Coliform Rule

This Consumer Confidence Report (CCR) reflects changes in drinking water regulatory requirements during 2022. These revisions add the requirements of the federal Revised Total Coliform Rule, effective since April 1, 2016, to the existing state Total Coliform Rule. The revised rule maintains the purpose of protecting public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., total coliform and E. coli bacteria). The U.S. EPA anticipates greater public health protection as the rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the water system. The state Revised Total Coliform Rule became effective July 1, 2022.

Operations

Nacimiento Water Project has been assigned three California State Water Resources Control Board (SWRCB) certified operators. Our operators are knowledgeable professionals who have many years of experience. They are dedicated to maintaining an excellent water system and providing you with the best quality water possible.

Operators conduct weekly inspections of the intake pump station, tanks, and distribution system. In addition, the SWRCB routinely inspects the facilities, operating procedures, and water quality monitoring records to verify compliance with state and federal regulatory requirements.

Water Quality Division

The Department of Public Works Water Quality Division provides laboratory and technical support services for most County operated water and wastewater systems. The Division operates two labs certified by the State of California's Environmental Laboratory Accreditation Program (ELAP). To remain certified by the State, the labs must annually demonstrate capability by analyzing unknown values for each constituent. In addition to analytical work, the Water Quality Division also provides sampling, compliance reporting, watershed monitoring, and technical support services for Public Works systems.

Community Participation

The County of San Luis Obispo Board of Supervisors meets two to three times a month. All meetings are held in the Board Chambers located in the new County Government Center, 1055 Monterey Street, San Luis Obispo. The Board holds budget hearings during June. Interested people should check the Board's agendas for specific dates. Agendas for all Board of Supervisors meetings are posted in some County libraries, the County Government Center, and on the Board of Supervisors internet website at https://www.slocounty.ca.gov/Departments/Administrative-Office/Board-of-Supervisors-Agenda.aspx. Regular Nacimiento Commission meetings are held quarterly on the fourth Thursday of selected months at 4:00 p.m. at the Chambers of the Templeton CSD or another agreed-upon location.

Meeting logistics are subject to change. Please contact County Public Works at 805-781-5252 or https://www.slocounty.ca.gov/Departments/Public-Works/Committees-Programs.aspx for confirmation of date, location, and time.
