# **2020 Consumer Confidence Report**

#### Water System Information

Water System Name: Bianchi Flowers, Inc.

Report Date: June 30, 2021

Type of Water Source(s) in Use: Well Water

Name and General Location of Source(s): Bianchi Flowers Inc round water (well02 –well on the hill) Butano Cut-off

Drinking Water Source Assessment Information: Performed in 2002, 2011, 2015, 2017, 2018.

Time and Place of Regularly Scheduled Board Meetings for Public Participation: Owners and Operations discuss this water system on a daily basis.

For More Information, Contact: BJ Burns, 650-879-0221

#### About This Report

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2020 and may include earlier monitoring data.

#### Importance of This Report Statement in Non-English Languages (Spanish)

Language in Spanish: Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Bianchi Flowers a 243 Butano Cut-off, 650-879-0221 para asistirlo en español.

| Term                                     | Definition  |
|--|---|
| Level 1 Assessment                       | A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.   |
| Level 2 Assessment                       | A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. |
| Maximum Contaminant<br>Level (MCL)       | The highest level of a contaminant that is allowed in drinking water.<br>Primary MCLs are set as close to the PHGs (or MCLGs) as is<br>economically and technologically feasible. Secondary MCLs are set to<br>protect the odor, taste, and appearance of drinking water.   |
| Maximum Contaminant<br>Level Goal (MCLG) | The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).  |

### Terms Used in This Report

| Term   | Definition   |
|--|--|
| Maximum Residual<br>Disinfectant Level<br>(MRDL)       | The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.                        |
| Maximum Residual<br>Disinfectant Level Goal<br>(MRDLG) | The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. |
| Primary Drinking Water<br>Standards (PDWS)             | MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.   |
| Public Health Goal<br>(PHG)                            | The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.                                 |
| Regulatory Action Level (AL)                           | The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.   |
| Secondary Drinking<br>Water Standards<br>(SDWS)        | MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.  |
| Treatment Technique<br>(TT)                            | A required process intended to reduce the level of a contaminant in drinking water.  |
| Variances and<br>Exemptions                            | Permissions from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.   |
| ND   | Not detectable at testing limit.   |
| ppm  | parts per million or milligrams per liter (mg/L)   |
| ррb  | parts per billion or micrograms per liter (µg/L)   |
| ppt  | parts per trillion or nanograms per liter (ng/L)   |
| ррд  | parts per quadrillion or picogram per liter (pg/L)   |
| pCi/L  | picocuries per liter (a measure of radiation)  |

# Sources of Drinking Water and Contaminants that May Be Present in Source Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

• Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

#### **Regulation of Drinking Water and Bottled Water Quality**

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

#### About Your Drinking Water Quality

#### **Drinking Water Contaminants Detected**

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

#### Table 1. Sampling Results Showing the Detection of Coliform Bacteria

Complete if bacteria are detected.

| Microbiological<br>Contaminants                                       | Highest No.<br>of<br>Detections | No. of<br>Months in<br>Violation | MCL  | MCLG | Typical Source<br>of Bacteria              |
|---|---------------------------------|----------------------------------|--|------|--|
| Total Coliform<br>Bacteria<br>(State Total<br>Coliform Rule)          | (In a month)<br>0               | 0                                | 1 positive monthly sample <sup>(a)</sup>   | 0    | Naturally present<br>in the<br>environment |
| Fecal Coliform or<br><i>E. coli</i><br>(State Total<br>Coliform Rule) | (In the year)<br>0              | 0                                | A routine sample and<br>a repeat sample are<br>total coliform positive,<br>and one of these is | None | Human and<br>animal fecal<br>waste         |

| Microbiological<br>Contaminants                               | Highest No.<br>of<br>Detections | No. of<br>Months in<br>Violation | MCL  | MCLG | Typical Source<br>of Bacteria      |
|---|---------------------------------|----------------------------------|--|------|------------------------------------|
|   |                                 |                                  | also fecal coliform or <i>E. coli</i> positive |      |                                    |
| <i>E. coli</i><br>(Federal Revised<br>Total Coliform<br>Rule) | (In the year)<br>0              | 0                                | (b)  | 0    | Human and<br>animal fecal<br>waste |

(a) Two or more positive monthly samples is a violation of the MCL

(b) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

#### Table 2. Sampling Results Showing the Detection of Lead and Copper

Complete if lead or copper is detected in the last sample set.

| Lead and<br>Copper | Sample Date | No. of Samples<br>Collected | 90 <sup>th</sup> Percentile<br>Level Detected | No. Sites<br>Exceeding AL | AL  | РНС | No. of Schools<br>Requesting<br>Lead Sampling | Typical Source<br>of<br>Contaminant   |
|--------------------|-------------|-----------------------------|---|---------------------------|-----|-----|---|---|
| Lead<br>(ppb)      | 2018        | 5                           | ND  | 0                         | 15  | 0.2 | 0   | Internal corrosion of<br>household water plumbing<br>systems; discharges from<br>industrial manufacturers;<br>erosion of natural deposits |
| Copper<br>(ppm)    | 2018        | 5                           | ND  | 0                         | 1.3 | 0.3 | Not<br>applicable                             | Internal corrosion of<br>household plumbing<br>systems; erosion of natural<br>deposits; leaching from<br>wood preservatives               |

#### Table 3. Sampling Results for Sodium and Hardness

| Chemical or<br>Constituent (and<br>reporting units) | Sample<br>Date | Level<br>Detected | Range of<br>Detections | MCL  | PHG<br>(MCLG) | Typical Source of<br>Contaminant   |
|---|----------------|-------------------|------------------------|------|---------------|--|
| Sodium (ppm)  | 7/2020         | 300               |                        | None | None          | Salt present in the water and is generally naturally occurring                   |
| Hardness (ppm)                                      | 7/2020         | 120               |                        | None | None          | Sum of polyvalent<br>cations present in the<br>water, generally<br>magnesium and |

| <br> | <br> | - |                   |
|------|------|---|-------------------|
|      |      |   | calcium, and are  |
|      |      |   | usually naturally |
|      |      |   | occurring         |

#### Table 4. Detection of Contaminants with a Primary Drinking Water Standard

| Chemical or<br>Constituent<br>(and<br>reporting units) | Sample<br>Date | Level<br>Detected | Range of<br>Detections | MCL<br>[MRDL] | PHG<br>(MCLG)<br>[MRDLG] | Typical Source<br>of<br>Contaminant  |
|--|----------------|-------------------|------------------------|---------------|--------------------------|--|
| Fluoride   | 7/2020         | .85               |                        | 2.0           | 1                        | Erosion of<br>natural deposits;<br>water additive<br>which promotes<br>strong teeth;<br>discharge from<br>fertilizer and<br>aluminum<br>factories  |
| TTHMs (Total<br>Trihalomethanes)                       | 7/2020         | 230               |                        | 80            |                          | Some people<br>who drink water<br>containing<br>trihalomethanes<br>in excess of the<br>MCL over many<br>years may<br>experience liver,<br>kidney, or central<br>nervous system<br>problems, and<br>may have an<br>increased risk of<br>getting cancer. |

#### Table 5. Detection of Contaminants with a Secondary Drinking Water Standard

| Chemical or<br>Constituent (and<br>reporting units) | Sample<br>Date | Level<br>Detected | Range of<br>Detections | SMCL | PHG<br>(MCLG) | Typical Source<br>of<br>Contaminant                     |
|---|----------------|-------------------|------------------------|------|---------------|---|
| Color   | 7/2020         | 8.0               |                        | 15   |               | Naturally-occurring organic materials                   |
| Turbidity   | 7/2020         | 3.2               |                        | 5    |               | Soil runoff   |
| Iron  | 7/2020         | 900               |                        | 300  |               | Leaching from<br>natural deposits;<br>industrial wastes |
| Manganese   | 7/2020         | 210               |                        | 50   |               | Leaching from<br>natural deposits                       |

| Chloride                        | 7/2020 | 190  | 500  | Runoff/leaching from<br>natural deposits;<br>seawater influence      |
|---------------------------------|--------|------|------|--|
| Sulfate                         | 7/2020 | 62   | 500  | Runoff/leaching from<br>natural deposits;<br>industrial wastes       |
| Total Dissolved<br>Solids (TDS) | 7/2020 | 900  | 1000 | Runoff/leaching from<br>natural deposits                             |
| Specific<br>Conductance         | 7/2020 | 1500 | 1600 | Substances that<br>form ions when in<br>water; seawater<br>influence |

#### Table 6. Detection of Unregulated Contaminants

| Chemical or<br>Constituent (and<br>reporting units) | Sample<br>Date | Level<br>Detected | Range of<br>Detections | Notification<br>Level | Health Effects<br>Language |
|---|----------------|-------------------|------------------------|-----------------------|----------------------------|
| Boron   | 7/2020         | 2000              | 100                    | None                  |                            |

#### **Additional General Information on Drinking Water**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

# Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

| Violation    | Explanation                  | Duration | Actions Taken to<br>Correct Violation   | Health Effects<br>Language   |
|--------------|------------------------------|----------|---|--|
| Exceed TTHMs | 7/2020 test was over the MCL | July     | Re-Sampled<br>August, October<br>and every quarter<br>since and has<br>tests ND | Some people who<br>drink water containing<br>trihalomethanes in<br>excess of the MCL<br>over many years may<br>experience liver, |

#### Table 7. Violation of a MCL, MRDL, AL, TT or Monitoring Reporting Requirement

|  | kidney, or central<br>nervous system<br>problems, and may |
|--|---|
|  | have an increased risk                                    |
|  | of getting cancer.  |

## Summary Information for Operating Under a Variance or Exemption

Bianchi Flowers did not operate under a variance or exemption in 2020.
