

APPENDIX B: eCCR Certification Form (Suggested Format)

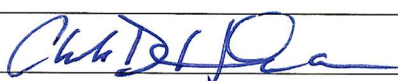

Consumer Confidence Report Certification Form

(To be submitted with a copy of the CCR)

Water System Name:	Montecito Water District
Water System Number:	4210007

The water system named above hereby certifies that its Consumer Confidence Report was distributed on June 07, 2023 (date) to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

Name: Chad Hurshman	Title: Water Treatment & Production Superintendent
Signature: 	Date: July 5, 2023
Phone number: (805) 969-2271	blank

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

- ☐ CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).
- ☒ CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).
- ☒ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - ☒ Posting the CCR at the following URL: www.montecitowater.com/doc/ccr2020
 - ☐ Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - ☒ Advertising the availability of the CCR in news media (attach copy of press release)
 - ☒ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - ☒ Posted the CCR in public places (attach a list of locations) – Public Board Meeting & Packet

- ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
- ☒ Delivery to community organizations (attach a list of organizations)
- ☐ Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
- ☒ Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
- ☐ Other (attach a list of other methods used)
- ☐ *For systems serving at least 100,000 persons:* Posted CCR on a publicly-accessible internet site at the following URL: www.
- ☐ *For privately-owned utilities:* Delivered the CCR to the California Public Utilities Commission

Consumer Confidence Report Electronic Delivery Certification

Water systems utilizing electronic distribution methods for CCR delivery must complete this page by checking all items that apply and fill-in where appropriate.

- ☒ Water system mailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available website where it can be viewed (attach a copy of the mailed CCR notification). URL: www.montecitowater.com/doc/ccr2022
- ☒ Water system emailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available site on the Internet where it can be viewed (attach a copy of the emailed CCR notification). URL: www.montecitowater.com/doc/ccr2022
- ☐ Water system emailed the CCR as an electronic file email attachment.
- ☐ Water system emailed the CCR text and tables inserted or embedded into the body of an email, not as an attachment (attach a copy of the emailed CCR).
- ☐ *Requires prior DDW review and approval.* Water system utilized other electronic delivery method that meets the direct delivery requirement.

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery.

Montecito Water District used electronic delivery for the 2022 CCR, and distribution was supported with these procedures:

CCR Posted to Web Site June 2, 2023 at www.montecitowater.com/doc/ccr2022

Bill Insert / Bill message sent to all District Customers with May Invoice: mailed before June 15, 2023.
Direct Email to all District Customers who have an email address associated with their account: sent on June 7, 2023
Delivery to Community Organizations: Montecito Association, Summerland Citizen's Association
Social Media Announcement: Facebook Post: June 8, 2023
Press placement / Advertisement in Montecito Journal announcing availability of CCR: June 8, 2023
Printed copies of the CCR are available / posted at the District Office.
Printed copies of the CCR are mailed upon request.
Multiple copies of the CCR are provided to landlords upon request.
PDF copies of the CCR are emailed upon request.

This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c) of the California Code of Regulations.

2022 ANNUAL DRINKING WATER CONSUMER CONFIDENCE REPORT

This report explains where your water comes from, provides information on water quality and how it is measured, and presents the District's 2022 test results which show that ***drinking water met, or was better than, state and federal water quality standards.***

The District prides itself on water treatment, which is done locally to the highest of standards. Stringent monitoring and testing happen round-the-clock. In 2022, water samples from school sites were tested for both lead and copper in recognition of the importance of safeguarding our community's child population and the EPA's Lead and Copper Rule.

Nick Turner,
General Manager

Water quality and supply management go hand-in-hand. Thanks to a combination of good planning and precipitation, the current water supply outlook is secure. Ample rain this winter filled reservoirs and reduced use by allowing customers to stop irrigating for months. The District's successful efforts to procure drought resilient options such as desalinated water have also increased our local, reliable supplies.

Community collaboration in water conservation is key.

Rain or shine, all customers share in the responsibility to make water supplies last as intended. Efficient water use remains essential to ensure water will be available when we need it most. Customer water conservation efforts are supported through a variety of programs including rebates and free on-site water efficiency check-ups. Additionally, the District is constantly working to improve quality and extend water supplies with infrastructure projects ranging from replacing aging pipelines and improving reservoir storage to updating meters and treatment facilities.

Reliability. Service. Quality.

District tradition for more than a century.

Water quality meets or exceeds all State and Federal standards

Certified/Licensed Distribution Staff and Engineers maintain and repair infrastructure

Certified/Licensed Treatment Staff and Engineers ensure testing and compliance

Drinking Water Consumer Confidence Report published annually

Monitoring and sampling occur 24 hours/day, 365 days/year

Reliable water service is essential for our health and safety, fire protection and to preserve the community's unique character.

Montecito Water District’s Water Quality Summary 2022

Primary Standards (PDWS)	Units	Maximum Contaminant Level	Public Health Goal (MCLG)	Jameson Lake Average	Jameson Lake Range	Ground Water Average	Ground Water Range	Cachuma Lake Average	Cachuma Lake Range	Common Sources of Contamination in Drinking Water
Water Clarity										
Treated Turbidity	NTU	TT = 1 NTU TT = 95% of Samples ≤ 0.3	NA	0.06	0.03-0.28 100.0%	<0.1	<0.1 100%	0.05	0.05 100%	Soil runoff.
Radioactive Contaminants (2020)										
Gross Alpha Particle Activity	pCi/L	15	(0)	1.33	1.33	2.63	1.22 - 3.86	ND	ND	Erosion of natural deposits.
Uranium	pCi/L	20	0.43	NA	NA	1.10	0.82 - 1.56	0.76	0.76	Erosion of natural deposits.
Inorganic Contaminants										
Aluminum	µg/L	1000	600	14	ND-40	ND	ND	56	ND - 180	Erosion of natural deposits; residue from some surface water treatment processes.
Arsenic	µg/L	10	0.004	ND	ND	0.33	ND-1	ND	ND	Erosion of natural deposits; runoff from orchards.
Barium	mg/L	1	2	0.05	0.05	0.08	0.06-0.09	ND	ND	Discharges of oil drilling wastes; erosion of natural deposits.
Total Chromium	µg/L	50	100	11	11	ND	ND	ND	ND	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits
Fluoride	mg/L	2	1	0.2	0.2	0.8	0.5 - 1.0	0.46	0.39 - 0.51	Erosion of natural deposits; discharge from fertilizer.
Mercury	µg/L	2	1.2	0.063	0.063	0.13	0.09-0.20	ND	ND	Erosion of natural deposits; runoff from landfills and cropland.
Nickel	µg/L	100	12	7	7	1	ND-2.0	ND	ND	Erosion of natural deposits.
Nitrate as N (Nitrogen)	mg/L	10	10	ND	ND	0.92	0.5-2.90	0.86	0.10 - 2.40	Runoff or leaching from fertilizer use; leaching from septic tanks and sewage; erosion from natural deposits
Selenium	µg/L	50	30	ND	ND	4	2.0-6.0	ND	ND	Discharge from petroleum, glass, and metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; runoff from livestock lots (feed additive).

Primary Standards for Distribution System	Units	Maximum Contaminant Level	Public Health Goal (MCLG)	Distribution System Average	Distribution System Range	Common Sources of Contamination in Drinking Water
Disinfectant						
Free Chlorine Residual	mg/L	MRDL, 4.0	MRDLG, 4.0	0.70	0.20-2.02	Drinking water disinfectant added for treatment
Disinfection Byproducts (DBP)						
Total Trihalomethanes	µg/L	80	NA	Highest LRAA, 55.5	18-79	Byproduct of drinking water disinfection
Haloacetic Acids	µg/L	60	NA	Highest LRAA, 43.4	14-60	Byproduct of drinking water disinfection
Bromate (Cachuma Lake)	µg/L	10	0.1	5.4	3.3 - 7.4	Byproduct of drinking water disinfection
Total Organic Carbon (DBP Precursor)	mg/L	TT	NA	2.7	1.1-4.0	Various natural and manmade sources. Total Organic Carbon (TOC) has no health effects. However, it provides a medium for the formation of disinfection byproducts.
Microbiological Contaminant Samples						
Total Coliform Bacteria	% Tests Positive	<5% of Monthly Samples of minimum 48 samples	0	0.00%	0	Naturally present in the environment.

Lead and Copper Rule (2020)	Units	RAL	PHG	Samples collected	Above RAL	90th Percentile	Schools (range)	Common Sources of Contamination in Drinking Water
Lead	µg/L	15	0.2	36	0	ND	ND	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits.
Copper	µg/L	1300	300	36	0	232	ND-1580	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives.

Lead and Copper Rule Every three years, a minimum of 30 residences are tested for lead and copper levels at the tap. The most recent set of 36 samples was collected in 2020. All of the samples were well below the regulatory action level (RAL). Copper was detected in 28 samples. The 90th percentile value was at 232 ug/L. Lead was not detected in any of the samples. The 90th percentile value was Non-Detect. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Montecito Water District is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/lead>.

Secondary Standards	Units	Maximum Contaminant Level	Jameson Lake Average	Jameson Lake Range	Ground Water Average	Ground Water Range	Cachuma Lake Average	Cachuma Lake Range	Common Sources of Contamination in Drinking Water
Aesthetic Standards									
Color	Units	15	6	6	ND	ND	3	ND - 5	Naturally-occurring organic materials.
Chloride	mg/L	500	6	6	148	89-198	33	30 - 36	Runoff or leaching from natural deposits; seawater influence.
Iron	µg/L	300	ND	ND	1	ND-30	ND	ND	Leaching from natural deposits; industrial wastes.
Manganese	µg/L	50	ND	ND	6	ND-40	ND	ND	Leaching from natural deposits.
Threshold Odor at 60 degrees celcius	Units	3	ND	ND	ND	ND	3	1 - 4	Naturally-occurring organic materials.
Specific Conductance	µS/cm	1600	898	798-1041	1175	899-1445	952	883 - 1016	Substances that form ions in water; seawater influence.
Sulfate	mg/L	500	225	225	149	128-195	280	240 - 310	Runoff or leaching from natural deposits; industrial wastes.
Total Dissolved Solids	mg/L	1000	620	620	710	560-890	640	542 - 736	Runoff or leaching from natural deposits.
Zinc	mg/L	5	ND	ND	0.017	ND - 0.030	ND	ND	Runoff or leaching from natural deposits; industrial wastes.

Montecito Water District’s Water Quality Summary 2022

Secondary Standards	Units	Maximum Contaminant Level	Jameson Lake Average	Jameson Lake Range	Ground Water Average	Ground Water Range	Cachuma Lake Average	Cachuma Lake Range
Additional Constituents Analyzed								
pH	pH units	NS	7.9	71-8.3	7.3	70-7.7	7.70	7.53 - 7.84
Total Hardness	mg/L	NS	385	328-428	411	284-528	386	340 - 428

Monobromoacetic Acid	µg/L	NS	0.24	0 - 0.8	NA	NA	2.3	ND - 4.9
Monochloroacetic Acid	µg/L	NS	1.17	ND - 1.6	NA	NA	2.3	ND - 4.9
Trichloroacetic Acid	µg/L	NS	18.41	10.75 - 26	NA	NA	4.2	ND - 12

This Consumer Confidence Report (CCR) reflects changes in drinking water regulatory requirements during 2021. These revisions add the requirements of the federal Revised Total Coliform Rule, effective since April 1, 2016, to the existing state Total Coliform Rule. The revised rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., total coliform and E. coli bacteria). The U.S. EPA

anticipates greater public health protection as the rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the water system. The state Revised Total Coliform Rule became effective July 1, 2021.

Nitrate as N (Nitrogen): Nitrate in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant’s blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider. MWD’s highest nitrate level in 2022 was 2.90 mg/L. The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:
Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.
Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

People with Sensitive Immune Systems
Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Drinking Water Info
Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. Environmental Protection Agency’s (USEPA’s) Safe Drinking Water Hotline (1-800-426-4791).

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the California Department of Public Health (CDPH) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. CDPH regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Source Water Assessment: A comprehensive source water assessment of the District’s drinking water sources was adopted in June 2021. A copy of this report is available for public inspection at the District Office.

Last year, as in years past, your tap water met all EPA and State drinking water health standards. Montecito Water District vigilantly safeguards its water supplies and once again we are proud to report that our system has never violated a maximum contaminant level or any other water quality standard. This brochure is a snapshot of last year’s water quality. Included are details about where your water comes from, what it contains, and how it compares to State standards. We are committed to providing you information because informed customers are our best allies.

WATER QUALITY TERMINOLOGY
Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Regulatory Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

mg/L: Milligrams per liter, or parts per million. 1 mg/L is equal to about one drop in 17 gallons of water.

µg/L: Micrograms per liter, or parts per billion. 1 ug/L is equal to about one drop in 17,000 gallons of water.

< : Less than.

NA: Not applicable.

NS: No Standard.

ND: Non-detected.

pCi/L: Pico curies per liter, a measure of radiation.

umhos/cm: Micromhos per centimeter (an indicator of dissolved minerals in water).

NTU: Nephelometric turbidity unit.

LRAA: Locational Running Annual Average

For Water Softeners: MWD’s surface water has a hardness range of 19 to 25 grains per gallon, while groundwater has a hardness range of 17 to 31 grains per gallon. One grain per gallon equals 171 mg/L.

Footnotes: The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, are more than one year old.

Surface water sources include the District’s Jameson Lake and Lake Cachuma. The District’s Amapola Well, Paden Well No. 2, Ennisbrook Well No. 5, Ennisbrook Well No. 2 and T Mosby Well No. 2 were used as groundwater supply sources.

An average number of 52 coliform samples were collected each month at 12 District sampling stations in compliance with the Federal Revised Total Coliform Rule . All sample results were negative.

Turbidity is a measure of the cloudiness of the water. Montecito Water District monitors for it continuously because turbidity is a good indicator of water quality. High turbidity can hinder the effectiveness of disinfectants. 100% of the District’s samples met the Turbidity Performance standard. The highest single surface water turbidity measurement during the year was 0.28 NTU.

WATER SOURCES 2022

Most water supplies are rainfall dependent, and become limited in times of drought. As the District looks to the future, it aims to increase its access to local, reliable supplies.

RELIABLE SINCE 1921
www.montecitowater.com

Doulton Tunnel, a horizontal well, source of groundwater and conveyance from Jameson Lake.

Cachuma Project (Lake Cachuma), a federally owned surface water facility.

Jameson Lake, a District owned surface water facility.

Groundwater wells, source from the Montecito Groundwater Basin.

Conservation - Water efficiency.

State Water Project & Supplemental Water Purchase.

FACILITIES

The District's water source portfolio and array of facilities is highly diversified. The combination of its own assets and collaboration with many partners provides added resiliency.

Conservation — water supply that is attained through efficiency of use — is unique in that it is dependent on people rather than rainfall. The District will continue to look to its customers for their partnership in using water wisely.

2 Surface Water Treatment Plants

7 Pumping Stations

9 Storage Reservoirs

12 Groundwater Wells

114 (approximate) Miles of Pipeline

1 Surface Water Reservoir, Dam and Groundwater Conveyance Tunnel

943 Fire Hydrants

Water Supplied by the City of Santa Barbara, secured by Charles E. Meyer Desalination facility.

CONSUMER CONFIDENCE REPORT 2022

WATER QUALITY CONTINUES TO MEET OR EXCEED STANDARDS

Montecito Water District is pleased to provide you with the Annual Drinking Water Consumer Confidence Report. This report explains where your water comes from, provides information on water quality and how it is measured, and presents the District's 2022 test results which show that drinking water met, or was better than, state and federal water quality standards.

The report is available online to view or print* at:
montecitowater.com/doc/ccr2022

Attention landlords, businesses, schools, and others:

Please share this information with tenants, employees, students, and any water users at your location who may not be customers receiving communications directly from Montecito Water District.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien. Para información en español llame al 805.969.2271.

*As part of our efforts to reduce costs and minimize environmental impacts, we now deliver reports electronically. If you would like to receive a printed copy of the report, please email info@montecitowater.com, call us at 805-969-2271, or visit the District office at 583 San Ysidro Road, Santa Barbara, CA 93108.

2022 Annual Drinking Water Consumer Confidence Report Now Available Online at www.montecitowater.com/doc/ccr2022

Attention landlords, businesses, schools and other groups: Please share this information with tenants, students, and other water users at your location who may not be customers receiving communications directly from Montecito Water District.

Dear Montecito Water District Customer,

Montecito Water District is pleased to provide you with the Annual Drinking Water Consumer Confidence Report. This report explains where your water comes from, provides information on water quality and how it is measured, and presents the District's 2022 test results which show that **drinking water met, or was better than, state and federal water quality standards.**

We encourage you to view the report and learn more about your drinking water by visiting: www.montecitowater.com/doc/ccr2022

We now deliver the annual report electronically rather than by mail to reduce costs and environmental impacts. If you would like to receive a printed version, please reply to this email (info@montecitowater.com) with your mailing address, or call us at [805-969-2271](tel:805-969-2271) with your request.

The mission of Montecito Water District is to provide an adequate and reliable supply of high quality water to the residents of Montecito and Summerland, at the most reasonable cost. In carrying out this mission, the District places particular emphasis on providing outstanding customer service, conducting its operations in an environmentally sensitive manner, and working cooperatively with other agencies.

583 San Ysidro Road, Montecito, CA 93108-2124 • [805-969-2271](tel:805-969-2271) • email: info@montecitowater.com

BOARD OF DIRECTORS: Tobe Plough, President | Ken Coates, Vice-President

Floyd Wicks, Director | Cori Hayman, Director | Brian Goebel, Director

Jim and Marcia Wolfe with Jamie and Josh Weitzman (photo by Joanne A Calitri)

Gerald and Carol Smith, Virginia Lee Harvey-Troesch, Nancy Read, Ray and Mary Freeman, Firooz Zahedi, Jim and Della Peterson, Alpha Resource Center Executive Director **Josh Weitzman** with wife **Jamie**; **David and Louise Borgatello**; **Gary and Susan Gulbransen**; and **Lucrezia DeLeon**. Also, Hillside President and CEO **Michael Rassler** with wife **Ruth**; Director of Operations **Gail Metzger**; Director of Nursing **Nonye Ogoamaka RN, MBA**; Board Chair **Brad Frohling** with wife **Cynthia**; Vice Chair **Norris Goss** with husband **Barry**; Board members **Kirk Gilbert MD** with wife **Pam**, **Nancy Werner** with husband **Russ**; **Hady Izadpanah**; **Alma J. Janabajab**; **Lisa Wilcox** with husband **Jim**; Chief Development Officer **Cheryl Sweeney** with husband **Tim**; Development Assistant **Elizabeth Arendt**; new Marketing and Events Manager **Angela De Bruyn**; committee members and event contributors **Carol Fell** with husband **Doug**; **Jan Kopf** with husband **Bob**, and artist **Jessika Cardinahl**.

Rassler and Frohling welcomed the guests and thanked key sponsors and their staff. Program keynote speakers Lisa and Jim Wilcox shared about being parents of a child with a disability; *"Shalom, we wish you shalom – peace. The divorce rate for parents with a disabled child is 95%. We are married 32 years, it has been hard, and we are thankful for Hillside where our son lives. We thank you for being here to support Hillside."*

Goss presented the Person of Purpose Award to Virginia Lee Harvey-Troesch, and Metzger presented the Advancing Abilities Award to **Jose Silva**, Facilities Director with Hillside for 16 years.

Emcee **Drew Wakefield** raised \$27.5K for the five listed live auction items along with a Sunstone Winery event added by John Price during the auction. He then raised over \$20K during the Ask. The event concluded with live music and conversation.

For donations and to schedule a visit of Hillside House, see 411.
