

April 21st, 2022

Mr. Kyle Graff

SWRCB Division of Drinking Water-Monterey District

1 Lower Ragsdale Ave, Building 1, Suite120

Monterey, CA 93940

2021 Consumer Confidence Report for the San Lorenzo Valley Water District (System# 4410002)

Mr. Graff,

The San Lorenzo Valley Water District has completed the distribution of the 2021 Consumer Confidence Report as of April 20th, 2022. Please see the following attachments that certify the methods of delivery:

1. Certification Form for the SLVWD-Felton system.
2. 2021 CCR of the SLVWD/SLVWD-Felton system.
3. A copy of the dedicated CCR notification email sent to electronic billing customers
4. A copy of the CCR notification bill insert, mailed to paper billing customers.
5. A copy of the March 2022 electronic news letter announcing the availability of the CCR. This March 2022 electronic news letter was also sent out to the media as well, to serve as the announcement of the availability of the CCR.

Please contact me if you have any comments or questions at (831)216-9019.

Sincerely,

A handwritten signature in black ink, appearing to read "Nate Gillespie".

Nate Gillespie

Water Quality and Treatment Manager

CC: District Manager

Director of Operations

Consumer Confidence Report Certification Form

(To be submitted with a copy of the CCR)

| | |
|----------------------|--------------|
| Water System Name: | SLVWD-Felton |
| Water System Number: | 4410002 |

The water system named above hereby certifies that its Consumer Confidence Report was distributed on April 20th, 2022 to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

| | |
|--|--|
| Name: Nate Gillespie | Title: Water Quality and Treatment Manager |
| Signature:  | Date: 4/21/2022 |
| Phone number: (831)216-9019 | blank |

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

- ☐ CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).
- ☒ CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).
- ☒ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - ☒ Posting the CCR at the following URL:
<https://www.slvwd.com/water-quality/files/slvwd-2021-ccr-final>
 - ☐ Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - ☒ Advertising the availability of the CCR in news media (attach copy of press release)
 - ☐ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - ☐ Posted the CCR in public places (attach a list of locations)

- ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
- ☐ Delivery to community organizations (attach a list of organizations)
- ☒ Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
- ☒ Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
- ☐ Other (attach a list of other methods used)
- ☐ *For systems serving at least 100,000 persons:* Posted CCR on a publicly-accessible internet site at the following URL: www._____
- ☐ *For privately-owned utilities:* Delivered the CCR to the California Public Utilities Commission

Consumer Confidence Report Electronic Delivery Certification

Water systems utilizing electronic distribution methods for CCR delivery must complete this page by checking all items that apply and fill-in where appropriate.

- ☒ Water system mailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available website where it can be viewed (attach a copy of the mailed CCR notification). URL:
<https://www.slwvd.com/water-quality/files/slwvd-2021-ccr-final>
- ☒ Water system emailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available site on the Internet where it can be viewed (attach a copy of the emailed CCR notification). URL:
<https://www.slwvd.com/water-quality/files/slwvd-2021-ccr-final>
- ☐ Water system emailed the CCR as an electronic file email attachment.
- ☐ Water system emailed the CCR text and tables inserted or embedded into the body of an email, not as an attachment (attach a copy of the emailed CCR).
- ☐ *Requires prior DDW review and approval.* Water system utilized other electronic delivery method that meets the direct delivery requirement.

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery.

| |
|-------------------|
| Please see below: |
| |

This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c) of the California Code of Regulations.

“Good faith” efforts were used to reach non-bill paying consumers. Those efforts included the following methods:

☒ *Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized) :*

- Posted on SLVWD Facebook page
- Posted on SLVWD Instagram page
- Posted on SLVWD Nextdoor page

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery:

For customers that receive electronic bills, a dedicated CCR notification email was sent with the subject line: “SLVWD 2021 Consumer Confidence Report.” This email was sent to all electronic billing customers on March 25th, 2022. The body of this dedicated CCR email notification contained a direct URL to the CCR (one CCR which included the SLVWD system and SLVWD- Felton system). For customer CCR notification emails that failed to deliver, a paper CCR notice was mailed to the corresponding service address of the customer.

For customers that receive paper bills, a paper CCR notification was mailed as an insert along with the April 2022 bill. The paper CCR notification was mailed along with the April 2022 bill to customers who received their bill on April 5th and April 20th, 2022. The paper CCR notification contained a direct URL to the CCR.

Consumer Confidence Report

2021

www.slvwd.com

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse San Lorenzo Valley Water District a 13060 Hwy 9, Boulder Creek CA 95006, (831)338-2153 para asistirlo en español.

What is this report?

This annual Consumer Confidence Report includes information on sources of water distributed by the San Lorenzo Valley Water District and includes a summary of the water quality tested in 2021. This report is intended to inform customers of the San Lorenzo Valley Water District about their drinking water quality. In an effort to provide this report to everyone, the District encourages landlords to provide a copy of this report to their tenants.

The San Lorenzo Valley Water District safeguards its water supplies and provides surface water treatment to ensure that customers receive the highest quality drinking water possible. In 2021, as in the years past, the San Lorenzo Valley Water District is pleased to report that our water provided to our customers met or surpassed all State of California and US Environmental Protection Agency drinking water health standards.

The SLVWD's mission is to provide our customers and all future generations with reliable, safe and high quality water at an equitable price; to create and maintain outstanding customer service; to manage and protect the environmental health of the aquifers and watersheds; and to ensure the fiscal vitality of the San Lorenzo Valley Water District.

Where does out water come from?

The San Lorenzo Valley Water District provides water to two separate drinking water systems: The San Lorenzo Valley Water District and The San Lorenzo Valley Water District-Felton. Each of these two drinking water systems have their own separate source of drinking water supply. The SLVWD and SLVWD-Felton systems have an interconnection, which allows for the transfer of water between the two systems on an emergency basis. In 2021, the SLVWD received approximately 50 million gallons of water from the SLVWD-Felton system, or approximately 11% of its total supply; while the SLVWD-Felton system received approximately 9 million gallons of water from the SLVWD system, or approximately 9% of water provided to the SLVWD-Felton system.

San Lorenzo Valley Water District System:

The San Lorenzo Valley Water District system service area includes the communities of: Boulder Creek, North of Boulder Creek, Brookdale, Ben Lomond, Quail Hollow, Glen Arbor, Zayante, Lompico and the Scotts Valley areas of Hidden Glenn, Lockwood Ln, Pasatiempo Pines, Whispering Pines, Manana Woods and both Spring Lakes and Vista Del Lago Mobile Home Parks.

Water Supply for the SLVWD system primarily utilizes surface water during the months of November to May. During periods of high stream flow, surface water can provide up to 100% of the drinking water in the SLVWD system. These surface sources are diverted from streams which are located in remote areas high within the District's protected watershed, away from human contamination. These streams come from granite formations with very low mineral content. This results in very soft, pleasant tasting water. These streams undergo filtration at one of the District's conventional surface water treatment plants.

To supplement supply during periods of low stream flow, the SLVWD blends surface water with groundwater from 3 separate wellfields: The Quail Hollow wellfield, the Olympia wellfield and the Pasatiempo wellfield.

The Quail Hollow wellfield is located in the Ben Lomond area. The two Quail Hollow wells produce water that is soft and is similar in quality to the surface water sources.

The Olympia wellfield is located in the Zayante area. The two Olympia production wells produce water that

has a higher mineral content, primarily iron, manganese and carbonate hardness. These minerals do not pose a health hazard when consumed, but affect the aesthetic qualities of water, such as taste, odor and color.

Dissolved gases present in the Olympia wells may also affect the taste and odor of the water. Customers in the Hihn Rd and Zayante area may experience periods of discolored water caused by precipitation of dissolved iron and manganese. The SLVWD adds polyphosphate to the Olympia well water to slow down the precipitation process; however, this is not completely effective and some deposition of iron and manganese can occur on the water mains. During periods of higher flow, these deposits of iron and manganese can become dislodged, which will result in discolored water. If discolored water is observed at your faucets cold water tap, the water is safe to use; however you may want to avoid washing laundry as staining may occur. If you experience prolonged periods of discolored water in all of your indoor cold water taps, please contact customer service at (831)338-2153.

The Pasatiempo wellfield is located off of Graham Hill Rd in Scotts Valley and primarily serves the Scotts Valley and Manana Woods neighborhoods. The three Pasatiempo wells produce water that is soft and similar in quality to the surface water sources.

San Lorenzo Valley Water District-Felton System:

The San Lorenzo Valley Water District-Felton system service area includes the town of Felton, Hwy 9 south to Big Trees, San Lorenzo Ave, Felton Empire Grade, Felton Grove and El Solyo Heights. Customers in the SLVWD-Felton system are supplied water from Bennett Springs, Bull Springs and Fall Creek. Drinking water treatment for these sources is provided at a conventional surface water treatment plant. These surface water sources have a moderate amount of dissolved minerals, primarily carbonate hardness. Customers off of Felton Empire Rd, Featherston Way and Jenny Way receive chlorinated water direct from Bennett Springs.

Source Water Assessments and Protection

A Source Water Assessment lists possible contaminating activities and the susceptibility of identified contamination threats that might affect the quality of our drinking water supplies. Copies of Source Water Assessments for each water source are available at the District Office. In 2018, the San Lorenzo Valley Water District completed a sanitary survey update to the San Lorenzo River Watershed.

Factors contributing to the potential vulnerability of the surface water sources of the San Lorenzo Valley Water District include: managed forests, septic systems, recreational activities, and government or institutional facilities. Factors contributing to the potential vulnerability of the groundwater sources of the San Lorenzo Valley Water District include: the high percolation capacity of the Santa Margarita

Sandstone Aquifer, residential septic tank systems, unused production wells and equestrian activities.

Many common household products are hazardous if carelessly handled or stored. Chemicals poured on the ground, down the drain, or the toilet can pollute our drinking water. Of particular concern are volatile organic chemicals (or, VOC's) and synthetic organic chemicals (or, SOC's). VOC's are chemicals commonly found in paints, solvents, degreasers and automotive products. SOC's are found in herbicides and pesticides. These products should be disposed of in a proper and responsible manner. The County of Santa Cruz receives household hazardous waste at the Ben Lomond Transfer Station. The SLVWD strongly encourages consumers to make use of this convenient program. For more information on disposal and receiving times, you may call the County at (831)454-2022, or visit <http://dpw.co.santa-cruz.ca.us/Home/RecyclingTrash.aspx>

Why are there contaminants in drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

-  Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
-  Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
-  Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

-  Organic chemical contaminants, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.

-  Radioactive contaminants that can be naturally-occurring or be the result of oil and gas production and mining activities.

In Order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (EPA) and the California State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Cryptosporidium is a microbial pathogen found in surface water throughout the U.S. Although filtration removes Cryptosporidium, the most commonly-used filtration methods cannot guarantee 100 percent removal. Our 2017-2018 monitoring indicates the presence of these organisms in our surface water for the SLVWD system. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of Cryptosporidium may cause cryptosporidiosis, and abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people, infants and small children, and the elderly are at greater risk of developing life threatening illness. We encourage immuno-compromised individuals to consult with their doctor regarding appropriate precautions to take to avoid infection. Cryptosporidium must be ingested to cause disease, and it may be spread through means other than drinking water.

Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The SLVWD is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline

1-800-426-4791 or at <http://www.epa.gov/lead>.

The SLVWD monitors for lead and copper at the customer's tap throughout the service area on a regular basis in accordance with the USEPA's Lead and Copper Rule regulations. The rule requires public water systems to sample at customers' homes that meet specific criteria where elevated levels of lead and copper are more likely to be found. Since 1993 samples have shown levels of lead and copper in service areas of the SLVWD to be well below the action levels set by the USEPA. See the enclosed water quality table for test results from the latest round of sampling.

In 2017, the San Lorenzo Valley Unified School District requested that the SLVWD conduct lead sampling at all seven SLVUSD campuses. Sample locations at all campuses included food preparation areas, drinking fountains and water bottle filling stations. All samples collected at SLVUSD campuses were well below the State's Lead Action Level of 15 parts per billion.

Water Quality Data Tables

Each water quality data table lists drinking water contaminants that were detected in 2021 for each respective water system. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk.

To better interpret the water quality data tables, please see the following definitions and notes:

DEFINITIONS:

MCL (Maximum Contaminant Level): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHG's (or MCLG's) as is economically and technologically feasible. Secondary MCL's are set to protect the odor, taste and appearance of drinking water.

Primary Drinking Water Standard (PDWS): MCL's, MRDL's, and treatment techniques (TT's) for contaminants that affect health, along with their monitoring and reporting requirements.

Secondary Drinking Water Standard (SDWS): MCL's for contaminants that may adversely affect the taste, odor or appearance of drinking water. These are aesthetic considerations that are not considered as health concerns.

MCLG (Maximum Contaminant Level Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

PHG (Public Health Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHG's are set by the California Environmental Protection Agency.

MRDL (Maximum Residual Disinfectant Level): The highest level of a disinfectant allowed in drinking water. There is now convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG (Maximum Residual Disinfectant Level Goal): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Notification Level (NL): Notification levels are non-regulatory, health-based advisory levels established for contaminants in drinking water for which maximum contaminant levels have not been established. Notification levels are established as precautionary measures for contaminants that may be considered candidates for establishment of maximum contaminant levels, but have not yet undergone or completed the regulatory standard setting process prescribed for the development of maximum contaminant levels and are not drinking water standards.

N/A: Not Applicable

UNITS:

ppm: Parts per million, or milligrams per liter. The time equivalent to 1 ppm is one second in 11.5 days.

ppb: Parts per billion, or micrograms per liter. The time equivalent to 1 ppb is one second in nearly 32 years.

ppt: Parts per trillion, or nanograms per liter. The time equivalent to 1 ppt is one second in nearly 32,000 years.

NTU: Nephelometric Turbidity Units.

pCi/L: Picocuries per liter (a measurement of radioactivity).

NOTES:

1. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.
2. SLVWD Olympia 2 and Olympia 3 Wells periodically exceed the Secondary Maximum Contaminant Level (SMCL) for iron and manganese. SMCLs are set for aesthetic reasons and do not cause adverse health effects. Iron and manganese can cause discolored water and staining. To offset this effect, the SLVWD adds polyphosphate, which acts to keep iron and manganese in solution and help prevent problems associated with this mineral.
3. The SLVWD was given a monitoring order by the State Water Resources Control Board, Division of Drinking water in September of 2020. This monitoring order directed the SLVWD to collect quarterly samples for PFOA and PFOS at Quail Hollow Well 5a, starting in the 4th quarter of 2020. Quail well 5a did have detections below the respective notification levels of PFOA and PFOS. Water produced from Quail well 5a accounted for 10.2% of water production for the SLVWD system in 2021.

SLVWD System Water Quality Testing Results

(Service area includes: Boulder Creek, Brookdale, Ben Lomond, Lompico, Zayante and the Scotts Valley areas of Lockwood Ln, Whispering Pines, Hidden Glenn and Manana Woods.)

Contaminants Regulated by a Primary Drinking Water Standard:

| | PHG or MCLG | MCL | Average | Range of Detection | Sample Date | Typical Sources of Contamination |
|---------------------------|-------------|------|---------|--------------------|-------------|---------------------------------------|
| Arsenic (ppb) | 0.6 | 10 | 2 | <2.0-5.4 | 2021 | Erosion of natural deposits. |
| Fluoride (ppb) | 1000 | 2000 | 164 | <100-510 | 2021 | Erosion of natural deposits. |
| Nitrate as Nitrogen (ppm) | 10 | 10 | 0.57 | <0.4-2.7 | 2021 | Runoff/leaching from natural deposits |

Additional Contaminants Regulated by a Primary Drinking Water Standard:

| | PHG or MCLG | MCL | Range of Detection | Highest Measurement | Sample Date | Typical Sources of Contamination |
|-----------------|-------------|-----------------------------|--------------------------|---------------------|-------------|---|
| Turbidity (NTU) | N/A | TT=95% of samples < 0.2 NTU | <0.2 in 99.9% of samples | 0.25 | 2021 | Soil runoff. Turbidity is a measure of the cloudiness of water. We monitor it because it is a good indicator of the effectiveness of our filtration system. |

Contaminants Regulated by a Secondary Drinking Water Standard:

| | PHG or MCLG | Secondary MCL | Average | Range of Detection | Sample Date | Typical Sources of Contamination |
|------------------------------|-------------|---------------|---------|--------------------|-------------|--|
| Chloride (ppm) | N/A | 500 | 7 | 5.9-9.6 | 2021 | Runoff/leaching from natural deposits. |
| Sulfate (ppm) | N/A | 500 | 49 | 4.2-250 | 2021 | Runoff/leaching from natural deposits. |
| Total Dissolved Solids (ppm) | N/A | 1000 | 208 | 110-650 | 2021 | Runoff/leaching from natural deposits. |
| Iron (ppb) ² | N/A | 300 | <100 | <100-780 | 2021 | Runoff/leaching from natural deposits. |
| Manganese (ppb) ² | N/A | 50 | 41 | <20-150 | 2021 | Leaching from natural deposits |

Disinfection Residual and Disinfection By-Products :

| | PHG or [MRDLG] | MCL or [MRDL] | Average | Range of Detection | Sample Date | Typical Sources of Contamination |
|--------------------------------|----------------|---------------|---------|--------------------|-------------|--|
| Free Chlorine (ppm) | [4] | [4] | 0.96 | 0.14-2.07 | 2021 | Drinking water disinfectant added for treatment. |
| Total Trihalomethanes (ppb) | N/A | 80 | 27 | 2-54 | 2021 | By-product of drinking water disinfection |
| Haloacetic Acids as HAA5 (ppb) | N/A | 60 | 21 | <1-49 | 2021 | By-product of drinking water disinfection |

Lead and Copper Monitoring:

| | PHG | AL | Number of Sites Exceeding AL | 90th Percentile Level Detected | Sample Date | Typical Sources of Contamination |
|--------------|-----|-----|------------------------------|--------------------------------|-------------|---|
| Lead (ppb) | 0.2 | 15 | 0 of 51 Samples Collected | <5.0 | 2020 | Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits |
| Copper (ppm) | 0.3 | 1.3 | 0 of 51 Samples Collected | 0.65 | 2020 | Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives |

Contaminants With Notification Levels

| | NL | Average | Range of Detection | Sample Date |
|--|-----|---------|--------------------|-------------|
| Perfluorooctanesulfonic acid [PFOS] (ppt) ³ | 6.5 | 2.3 | <2-2.6 | 2021 |
| Perfluorooctanoic acid [PFOA] (ppt) ³ | 5.1 | <2 | <2-2.3 | 2021 |

Other Monitoring Results:

| | Average | Range of Detection | Sample Date | Typical Source of Contamination |
|----------------|---------|--------------------|-------------|---|
| Hardness (ppm) | 118 | 52-460 | 2021 | Hardness is the sum of the major cations, primarily calcium and magnesium. The cations are ususally naturally occurring |
| Sodium (ppm) | 12.7 | 10-18 | 2021 | Sodium refers to the salt present in the water and is generally naturally occurring. |

SLVWD-Felton System Water Quality Testing Results

(Service area includes the Town of Felton, Felton Empire Grade, Felton Grove, San Lorenzo Ave and El Solto Heights)

Contaminants Regulated by a Primary Drinking Water Standard:

| | PHG or MCLG | MCL | Average | Range of Detection | Sample Date | Typical Sources of Contamination |
|---------------------------------------|-------------|------|---------|--------------------|-------------------|----------------------------------|
| Fluoride (ppb) | 1000 | 2000 | 100 | <100-120 | 2021 | Erosion of natural deposits. |
| Gross Alpha particle activity (pCi/L) | 0 | 15 | <3.0 | <3.0-4.3 | 2014 ¹ | Erosion of natural deposits. |

Additional Contaminants Regulated by a Primary Drinking Water Standard:

| | PHG or MCLG | MCL | Range of Detection | Highest Measurement | Sample Date | Typical Sources of Contamination |
|-----------------|-------------|-----------------------------|-------------------------|---------------------|-------------|---|
| Turbidity (NTU) | N/A | TT=95% of samples < 0.2 NTU | <0.2 in 100% of samples | 0.12 | 2021 | Soil runoff. Turbidity is a measure of the cloudiness of water. We monitor it because it is a good indicator of the effectiveness of our filtration system. |

Contaminants Regulated by a Secondary Drinking Water Standard:

| | PHG or MCLG | Secondary MCL | Average | Range of Detection | Sample Date | Typical Sources of Contamination |
|------------------------------|-------------|---------------|---------|--------------------|-------------|--|
| Chloride (ppm) | N/A | 500 | 9.4 | 7.5-11 | 2021 | Runoff/leaching from natural deposits. |
| Sulfate (ppm) | N/A | 500 | 11 | 9.8-12 | 2021 | Runoff/leaching from natural deposits. |
| Total Dissolved Solids (ppm) | N/A | 1000 | 263 | 170-320 | 2021 | Runoff/leaching from natural deposits. |

Disinfection Residual and Disinfection By-Products:

| | PHG or [MRDLG] | MCL or [MRDL] | Average | Range of Detection | Sample Date | Typical Sources of Contamination |
|--------------------------------|----------------|---------------|---------|--------------------|-------------|--|
| Free Chlorine (ppm) | [4] | [4] | 0.9 | 0.39-1.68 | 2021 | Drinking water disinfectant added for treatment. |
| Total Trihalomethanes (ppb) | N/A | 80 | 23 | 12-27 | 2021 | By-product of drinking water disinfection |
| Haloacetic Acids as HAA5 (ppb) | N/A | 60 | 17 | 8-21 | 2021 | By-product of drinking water disinfection |

Lead and Copper Monitoring:

| | PHG | AL | Number of Sites Exceeding AL | 90th Percentile Level Detected | Sample Date | Typical Sources of Contamination |
|--------------|-----|-----|------------------------------|--------------------------------|-------------|---|
| Lead (ppb) | 0.2 | 15 | 0/21 | <5.0 | 2020 | Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits |
| Copper (ppm) | 0.3 | 1.3 | 0/21 | 0.37 | 2020 | Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives |

Other Monitoring Results:

| | Average | Range of Detection | Sample Date | Typical Source of Contamination |
|----------------|---------|--------------------|-------------|---|
| Hardness (ppm) | 223 | 120-280 | 2021 | Hardness is the sum of the major cations, primarily calcium and magnesium |
| Sodium (ppm) | 9.3 | 7-11 | 2021 | Runoff/leaching from natural deposits |

Monitoring and Restoring Water Quality Post CZU Fire:

The San Lorenzo Valley Water District wants its customers to know that serving safe and high quality water in both normal and adverse conditions continues to be the top priority of the SLVWD.

In August 2020, the CZU Lightning Complex Fire burned through the San Lorenzo Valley. While the fire was burning, SLVWD crews worked diligently to minimize the potential for destruction of SLVWD facilities and preserve water quality. These efforts included maintaining water pressure in the Highway 9 water main to keep the distribution system pressurized as well as provide water for the firefighting effort. The fire ultimately destroyed 1600 acres of SLVWD watershed property, destroyed surface water intakes and associated raw water pipelines, and damaged some water storage facilities and tanks.

Following the CZU Lightning Complex Fire, as water quality impacts to the distribution system were not fully known, the SLVWD, in conjunction with its regulatory agency the State Water Resources Control Board Division of Drinking Water (DDW), issued a Do Not Drink-Do Not Boil (DND-DNB) water notice on August 28th, 2020 as a precaution to all service areas impacted by the fire, including the town of Brookdale, town of Boulder Creek, and the neighborhoods along Bear Creek Rd, Big Basin Way and all service areas north of Boulder Creek. Prior to and following the issuance of the DND-DNB notice, SLVWD crews executed a comprehensive flushing and water quality testing program. This program included the monitoring at dozens of representative sites of Volatile Organic Compounds (VOC's), Nitrate, bacteriological samples and general physical samples. In total, over 400 samples were collected, generating results for over 20,000 water quality data points during the DND-DNB notice. Benzene and other VOC's were ultimately detected in 7 of the 41 samples collected in the Riverside Grove neighborhood, north of Boulder Creek, which was inside of the DND-DNB notice area. Benzene was last detected in the Riverside Grove neighborhood on September 16th, 2020. Results of all monitoring undertaken in the DND-DNB notice area as well as maps of the DND-DNB notice area can be found on the SLVWD's website at: <https://www.slvwd.com/water-quality/pages/czu-fire-water-quality-info>

Inside of the DND-DNB notice area, SLVWD crews physically removed SLVWD owned service laterals connecting the water main to any structures that had burned from the water distribution system as a means to prevent contamination from reoccurring. During the DND-DNB notice time period, the SLVWD had set up a potable water filling station at it's Operations building. After extensive water quality testing had been conducted in all areas that demonstrated the absence of VOC's over regulatory MCL's, and was absent of bacteriological and nitrate contamination, the DND-DNB notice was lifted in all areas by the SLVWD in conjunction with DDW on October 27th, 2020.

Ensuring that customers of the SLVWD are provided with safe drinking water is the SLVWD's top priority. Even though the DND-DNB notice was cancelled in October 2020, the SLVWD has not let its guard down on the potential of VOC recontamination. The SLVWD has developed a Long Term VOC Monitoring Plan which goes above regulatory VOC monitoring requirements to continue to monitor for any contamination in the distribution system in the months and years following the CZU Lightning Complex fire. As of the close of the water quality

monitoring period in 2021, no VOC's have been detected at monitoring locations at or above state drinking water limits. All results of the Long Term VOC Monitoring are regularly posted on the SLVWD's website and can be viewed here: <https://www.slvwd.com/water-quality/pages/long-term-voc-monitoring-post-czu-fire>

For more information on post-CZU Fire water quality, contact Nate Gillespie, Water Quality and Treatment Manager at (831)216-9019, ngillespie@slvwd.com

IMPORTANT WATER QUALITY INFORMATION

Consumer Confidence Report

The 2021 San Lorenzo Valley Water District Consumer Confidence Report is now available! Please go to our website or,

<https://www.slvwd.com/water-quality/files/slvwd-2021-ccr-final>

To obtain a paper copy of the 2021 Consumer Confidence Report contact the San Lorenzo Valley Water District at (831) 338-2153.

This Notice contains instructions for you to obtain important information about your drinking water. Translate it, or speak with someone who understands it.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse San Lorenzo Valley Water District a 13060 Hwy 9, Boulder Creek CA 95006, (831)338-2153 para asistirlo en español.

San Lorenzo Valley Water District operates two (2) independent water distribution systems. The two water systems are the SLVWD System and the SLVWD-Felton System. You can determine which system provides your water service by reviewing your individual Route No. located on your water bill.

Route Numbers 23-29 denotes the SLVWD-Felton System

Route Numbers 11-22 and 30-97 denotes the SLVWD System

For example; Route 32 receives water service from the SLVWD System, while Route number 26 receives water service from the SLVWD-Felton System.

For additional information regarding water quality, please contact the San Lorenzo Valley Water District's, Water Quality and Treatment Manager, Nate Gillespie, at (831) 216-9019 or e-mail to ngillespie@slvwd.com.

NEWS STREAMS

SLVWD MONTHLY BULLETIN

Consumer Confidence Report (CCR) 2021

What is the CCR?

The Customer Confidence Report (CCR) is intended to inform San Lorenzo

Valley Water District (SLVWD) customers about their drinking water quality. The CCR includes a summary of the water quality tested in 2021 and information on water sources distributed by the SLVWD. In an effort to provide this report to everyone, the District encourages landlords to provide a copy of this report to their tenants.

The San Lorenzo Valley Water District safeguards its water supplies and provides water treatment to ensure that customers receive the highest quality drinking water possible. In 2021, as in the years past, the San Lorenzo Valley Water District is pleased to report that our water provided to our customers met or surpassed all State of California and US Environmental Protection Agency drinking water health standards.

Annual System Flushing Begins

North System Flushing -
From March 7th - March 25th, 2022

Find specific dates for your neighborhood at

<https://www.slvwd.com/home/news/2022-system-flushing-schedule-0>

Flushing will occur between the regular business hours of
9:00 a.m. and 4:00 p.m.

SLVWD is undertaking its annual water main flushing program. The District requests your cooperation by asking that you reduce water usage during flushing in your area. Please refrain from doing laundry, as the water may be discolored for a short time. In addition, you may experience periods of low water pressure and/or interruption of water service. If you have any questions or need additional information, do not hesitate to contact the

District at (831) 338-2153 or go to

<https://www.slvwd.com/home/news/2022-system-flushing-schedule-0>

SLVWD Team Member

Nate Gillespie Q&A

SLVWD staff works each day to meet the District's mission of providing reliable, safe and high-quality water to its customers. The District is proud of the dedicated, skilled, and knowledgeable professionals on its team. This month we introduce the District's Water Quality and Treatment Manager, Nate Gillespie.

Q. What is your name and job title?

A. Nate Gillespie, Water Quality and Treatment Manager.

Q. How long have you worked at SLVWD?

A. Six years.

Q. What is your favorite part of your job?

A. Overcoming many of the daily challenges that arise in order to provide an essential service to the communities of the San Lorenzo Valley. There is never a dull moment in this job!

Q. What is the most interesting thing you have learned?

A. Working at the SLVWD has provided me with a great understanding of how a

water system works as a whole unit: in its most basic sense — water resources (both ground and surface) must be managed efficiently and ecologically in lockstep with water production operations in order to provide water of the utmost quality to our ratepayers, who pay their bills in order to maintain the infrastructure and provide the service of drinking water delivered right to the customers' kitchen sink.

Q. What is one thing that you think people would like to know about SLVWD?

A. I would like for people to know that a lot of hard work goes into providing safe drinking water to our ratepayers. The SLVWD has a staff of dedicated operators who work tirelessly, sometimes in cold, wet conditions in the middle of the night with the number one objective of providing customers with an uninterrupted supply of safe drinking water.

Q. What do you do on your time off?

A. I am married, have two kids, and I love to mountain bike, hike, and enjoy beach days. I feel very fortunate to live in an area that easily provides access to all of these activities!

Water Efficiency Classes for Landscape Professionals Available Both Online and In-Person

Qualified Water Efficient Landscapers (QWEL) and Green Gardener Certification Program will hold landscape water efficiency certification classes in both English and Spanish for landscape professionals. Certification classes will be held on Tuesdays and Thursdays, April 14-May 24, 2022 from 6:30-8:30 p.m., both online and in-person. Sponsored by the Water Conservation Coalition of Santa Cruz County and Watsonville/Aptos/Santa Cruz (WASC) Adult Education, landscapers can sign up at qwel.net or by calling (831) 786-2160.

Have a question or a concern? They may be answered on our Frequently Asked Questions page. Go to <https://www.slvwd.com/faqs>. If that doesn't answer your question or address your concerns, contact our Customer Service directly, <https://www.slvwd.com/customer-service>
