

August 31st, 2023

Mr. Kyle Graff

SWRCB Division of Drinking Water-Monterey District

1 Lower Ragsdale Ave, Building 1, Suite120

Monterey, CA 93940

2022 Consumer Confidence Report for the San Lorenzo Valley Water District (System# 4410014)

Mr. Graff,

The San Lorenzo Valley Water District has completed the distribution of the 2022 Consumer Confidence Report as of May 22nd, 2023. Please see the following attachments that certify the methods of delivery:

1. Certification Form for the SLVWD system. With a description of delivery methods.
2. 2022 CCR of the SLVWD system.
3. A copy of the dedicated CCR notification email sent to electronic billing customers
4. A copy of the CCR notification bill insert, mailed to paper billing customers.
5. A copy of the June 2023 electronic news letter announcing the availability of the CCR. This June 2023 electronic news letter was also sent out to the media as well, to serve as the announcement of the availability of the CCR.

Please contact me if you have any comments or questions at (831) 216-9019.

Sincerely,

A handwritten signature in black ink, appearing to read "Jesse Guiver".

Jesse Guiver

Water Quality and Treatment Manager

Consumer Confidence Report Certification Form

(To be submitted with a copy of the CCR)

Water System Name:	SLVWD
Water System Number:	4410014

The water system named above hereby certifies that its Consumer Confidence Report was distributed on June 20th, 2022 to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

Name: Jesse Guiver	Title: Water Quality and Treatment Manager
Signature:	Date: 8/31/2023
Phone number: (831) 216-9019	blank

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

- ☐ CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).
- ☒ CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).
- ☒ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - ☒ Posting the CCR at the following URL:

<https://www.slvwd.com/home/news/now-available-2022-consumer-confidence-report-ccr>

- ☐ Mailing the CCR to postal patrons within the service area (attach zip codes used)
- ☒ Advertising the availability of the CCR in news media (attach copy of press release)
- ☐ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
- ☐ Posted the CCR in public places (attach a list of locations)

- ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
- ☐ Delivery to community organizations (attach a list of organizations)
- ☒ Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
- ☒ Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
- ☐ Other (attach a list of other methods used)
- ☐ *For systems serving at least 100,000 persons:* Posted CCR on a publicly-accessible internet site at the following URL: www._____
- ☐ *For privately-owned utilities:* Delivered the CCR to the California Public Utilities Commission

Consumer Confidence Report Electronic Delivery Certification

Water systems utilizing electronic distribution methods for CCR delivery must complete this page by checking all items that apply and fill-in where appropriate.

- ☒ Water system mailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available website where it can be viewed (attach a copy of the mailed CCR notification). URL:
<https://www.slwvd.com/home/news/now-available-2022-consumer-confidence-report-ccr>
- ☒ Water system emailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available site on the Internet where it can be viewed (attach a copy of the emailed CCR notification). URL:
<https://www.slwvd.com/home/news/now-available-2022-consumer-confidence-report-ccr>
- ☐ Water system emailed the CCR as an electronic file email attachment.
- ☐ Water system emailed the CCR text and tables inserted or embedded into the body of an email, not as an attachment (attach a copy of the emailed CCR).
- ☐ *Requires prior DDW review and approval.* Water system utilized other electronic delivery method that meets the direct delivery requirement.

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery.

Please see below:

This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c) of the California Code of Regulations.

“Good faith” efforts were used to reach non-bill paying consumers. Those efforts included the following methods:

☒ *Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized) :*

- Posted on SLVWD Facebook page
- Posted on SLVWD Instagram page
- Posted on SLVWD Twitter page

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery:

For customers that receive electronic bills, a dedicated CCR notification email was sent with the subject line: “SLVWD 2022 Consumer Confidence Report.” This email was sent to all electronic billing customers on June 5th, 2023. The body of this dedicated CCR email notification contained a direct URL to the CCR (one CCR which included the SLVWD system and SLVWD- Felton system). For customer CCR notification emails that failed to deliver, a paper CCR notice was mailed to the corresponding service address of the customer.

For customers that receive paper bills, a paper CCR notification was mailed as an insert along with the June 2023 bill. The paper CCR notification was mailed along with the June 2023 bill to customers who received their bill on June 5th and June 20th, 2023. The paper CCR notification contained a direct URL to the CCR.

San
Lorenzo Valley
WATER DISTRICT

Consumer Confidence Report 2022

www.slvwd.com

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse San Lorenzo Valley Water District a 13060 Hwy 9, Boulder Creek CA 95006, (831)338-2153 para asistirlo en español.

What is this report?

This annual Consumer Confidence Report (CCR) includes information on sources of water distributed by the San Lorenzo Valley Water District (SLVWD) and includes a summary of the water quality tested in 2022. This report is intended to inform customers of the SLVWD about their drinking water quality. In an effort to provide this report to everyone, the District encourages landlords to provide a copy of this report to their tenants.

The SLVWD safeguards its water supplies and provides surface water treatment to ensure that customers receive the highest quality drinking water possible. In 2022, as in the years past, the SLVWD is pleased to report that our water provided to our customers met or surpassed all State of California and US Environmental Protection Agency drinking water health standards.

The SLVWD's mission is to provide our customers and all future generations with reliable, safe and high quality water at an equitable price; to create and maintain outstanding customer service; to manage and protect the environmental health of the aquifers and watersheds; and to ensure the fiscal vitality of the SLVWD.

Where does our water come from?

The SLVWD provides water to two separate drinking water systems: The SLVWD and The SLVWD-Felton. Each of these two drinking water systems have their own separate source of drinking water supply. The SLVWD and SLVWD-Felton systems have an interconnection, which allows for the transfer of water between the two systems on an emergency basis. In 2022, the SLVWD received approximately 102 million gallons of water from the SLVWD-Felton system, or approximately 21% of its total supply; while the SLVWD-Felton system received approximately 1.5 million gallons of water from the SLVWD system, or approximately 1% of water provided to the SLVWD-Felton system.

San Lorenzo Valley Water District System:

The SLVWD system service area includes the communities of: Boulder Creek, North of Boulder Creek, Brookdale, Ben Lomond, Quail Hollow, Glen Arbor, Zayante, Lompico and the Scotts Valley areas of Hidden Glenn, Lockwood Ln, Pasatiempo Pines, Whispering Pines, Manana Woods and both Spring Lakes and Vista Del Lago Mobile Home Parks.

Water Supply for the SLVWD system primarily utilizes surface water during the months of November to May. During periods of high stream flow, surface water can provide up to 100% of the drinking water in the SLVWD system. These surface sources are diverted from streams which are located in remote areas high within the District's protected watershed, away from human contamination. These streams come from granite formations with very low mineral content. This results in very soft, pleasant tasting water. These streams undergo filtration at one of the District's conventional surface water treatment plants.

To supplement supply during periods of low stream flow, the SLVWD blends surface water with groundwater from 3 separate wellfields: The Quail Hollow wellfield, the Olympia wellfield and the Pasatiempo wellfield.

The Quail Hollow wellfield is located in the Ben Lomond area. The two Quail Hollow wells produce water that is soft and is similar in quality to the surface water sources. The Olympia wellfield is located in the Zayante area. The two Olympia production wells

produce water that has a higher mineral content, primarily iron, manganese and carbonate hardness. These minerals do not pose a health hazard when consumed, but affect the aesthetic qualities of water, such as taste, odor and color. Dissolved gases present in the Olympia wells may also affect the taste and odor of the water. Customers in the Hihn Rd and Zayante area may experience periods of discolored water caused by precipitation of dissolved iron and manganese. The SLVWD adds polyphosphate to the Olympia well water to slow down the precipitation process; however, this is not completely effective and some deposition of iron and manganese can occur on the water mains. During periods of higher flow, these deposits of iron and manganese can become dislodged, which will result in discolored water. If discolored water is observed at your faucets cold water tap, the water is safe to use; however you may want to avoid washing laundry as staining may occur. If you experience prolonged periods of discolored water in all of your indoor cold water taps, please contact customer service at (831)338-2153.

The Pasatiempo wellfield is located off of Graham Hill Rd in Scotts Valley and primarily serves the Scotts Valley and Manana Woods neighborhoods. The three Pasatiempo wells produce water that is soft and similar in quality to the surface water sources.

San Lorenzo Valley Water District- Felton System:

The SLVWD-Felton system service area includes the town of Felton, Hwy 9 south to Big Trees, San Lorenzo Ave, Felton Empire Grade, Felton Grove and El Solvo Heights. Customers in the SLVWD-Felton system are supplied water from Bennett Springs, Bull Springs and Fall Creek. Drinking water treatment for these sources is provided at a conventional surface water treatment plant. These surface water sources have a moderate amount of dissolved minerals, primarily carbonate hardness. Customers off of Felton Empire Rd, Featherston Way and Jenny Way receive chlorinated water direct from Bennett Springs.

Source Water Assessments and Protections

A Source Water Assessment lists possible contaminating activities and the susceptibility of identified contamination threats that might affect the quality of our drinking water supplies. Copies of Source Water Assessments for each water source are available at the District Office. In 2018, the SLVWD completed a sanitary survey update to the San Lorenzo River Watershed.

Factors contributing to the potential vulnerability of the surface water sources of the SLVWD include: managed forests, septic systems, recreational activities, and government or institutional facilities. Factors contributing to the potential vulnerability of the groundwater sources of the SLVWD include: the high percolation capacity of the Santa Margarita Sandstone Aquifer, residential septic tank systems, unused production wells and equestrian activities.

Many common household products are hazardous if carelessly handled or stored. Chemicals poured on the ground, down the drain, or the toilet can pollute our drinking water. Of particular concern are volatile organic chemicals (or, VOC's) and synthetic organic chemicals (or, SOC's). VOC's are chemicals commonly found in paints, solvents, degreasers and automotive products. SOC's are found in herbicides and pesticides. These products should be disposed of in a proper and responsible manner. The County of Santa Cruz receives household hazardous waste at the Ben Lomond Transfer Station. The SLVWD strongly encourages consumers to make use of this convenient program. For more information on disposal and receiving times, you may call the County at (831)454-2022, or visit <http://dpw.co.santa-cruz.ca.us/Home/RecyclingTrash.aspx>

Why are there contaminants in drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (800)426-4791.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals that

are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.

- Radioactive contaminants that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (EPA) and the California State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800)426-4791.

Cryptosporidium is a microbial pathogen found in surface water throughout the U.S. Although filtration removes *Cryptosporidium*, the most commonly-used filtration methods cannot guarantee 100 percent removal. Our 2017-2018

monitoring indicates the presence of these organisms in our surface water for the SLVWD system. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of *Cryptosporidium* may cause cryptosporidiosis, and abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immunocompromised people, infants and small children, and the elderly are at greater risk of developing life threatening illness. We encourage immunocompromised individuals to consult with their doctor regarding appropriate precautions to take to avoid infection. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water.

Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The SLVWD is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/lead>.

The SLVWD monitors for lead and copper at the customer's tap throughout the service area on a regular basis in accordance with the USEPA's Lead and Copper Rule regulations. The rule requires public water systems to sample at customers' homes that meet specific criteria where elevated levels of lead and copper are more likely to be found. Since 1993 samples have shown levels of lead and copper in service areas of the SLVWD to be well below the action levels set by the USEPA. See the enclosed water quality table for test results from the latest round of sampling.

Water Quality Data Tables

Each water quality data table lists drinking water contaminants that were detected in 2022 for each respective water system. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk.

To better interpret the water quality data tables, please see the following definitions and notes:

DEFINITIONS:

MCL (Maximum Contaminant Level): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHG's (or MCLG's) as is economically and technologically feasible. Secondary MCL's are set to protect the odor, taste and appearance of drinking water.

Primary Drinking Water Standard (PDWS): MCL's, MRDL's, and treatment techniques (TT's) for contaminants that affect health, along with their monitoring and reporting requirements.

Secondary Drinking Water Standard (SDWS): MCL's for contaminants that may adversely affect the taste, odor or appearance of drinking water. These are aesthetic considerations that are not considered as health concerns.

MCLG (Maximum Contaminant Level Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

PHG (Public Health Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHG's are set by the California Environmental Protection Agency.

MRDL (Maximum Residual Disinfectant Level): The highest level of a disinfectant allowed in drinking water. There is now convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG (Maximum Residual Disinfectant Level Goal): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Notification Level (NL): Notification levels are non-regulatory, health-based advisory levels established for contaminants in drinking water for which maximum contaminant levels have not been established. Notification levels are established as precautionary measures for contaminants that may be considered candidates for establishment of maximum contaminant levels, but have not yet undergone or completed the regulatory standard setting process prescribed for the development of maximum contaminant levels and are not drinking water standards.

N/A: Not Applicable

UNITS:

ppm: Parts per million, or milligrams per liter. The time equivalent to 1 ppm is one second in 11.5 days.

ppb: Parts per billion, or micrograms per liter. The time equivalent to 1 ppb is one second in nearly 32 years.

ppt: Parts per trillion, or nanograms per liter. The time equivalent to 1 ppt is one second in nearly 32,000 years.

NTU: Nephelometric Turbidity Units.

pCi/L: Picocuries per liter (a measurement of radioactivity).

Completion of the Post CZU Fire VOC Monitoring Program

The SLVWD is pleased to report that the State-accepted Volatile Organic Compound (VOC) Monitoring Plan reached its 2 year monitoring conclusion at the end of 2022. During the entire Post CZU monitoring program, no VOC's were detected above state standards. Following the CZU fire VOC's were ultimately detected in the fire impacted neighborhood of Riverside Grove. The district resulted in isolated detection of Volatile Organic Compounds (VOCs) in fire-impacted neighborhoods shortly after the fire. Following the

VOC detections, the District put together a thorough VOC monitoring plan that was accepted by our regulatory agency. This monitoring plan began with daily sampling during the first few months of the fire, then shifted to a monthly sampling schedule, for a duration of two years. Although the Post CZU Fire VOC monitoring program has concluded the District will continue to monitor for VOC, as providing high quality drinking water to its customers is a top priority of the SLVWD.

NOTES

1. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.
2. SLVWD Olympia 2 well, Olympia 3 well and the Pasatiempo 7 well have exceed the Secondary Maximum Contaminant Level (SMCL) for iron and manganese. The SLVWD adds polyphosphate to the Olympia wells, which acts to keep iron and manganese in solution and help prevent problems associated with these minerals, such as colored water episodes and staining of laundry. Water produced from Olympia 2 and Olympia 3 wells accounted for approximately 23% of water production for the SLVWD system in 2022. The Pasatiempo 7 well accounted for approximately 4% of water production for the SLVWD system in 2022.
3. The SLVWD was given a monitoring order by the State Water Resources Control Board, Division of Drinking water in September of 2020. This monitoring order directed the SLVWD to collect quarterly samples for PFOA and PFOS at Quail Hollow well 5a, starting in the 4th quarter of 2020. Quail well 5a did have detections below the respective notification levels of PFOA and PFOS. Water produced from Quail well 5a accounted for approximately 10% of water production for the SLVWD system in 2022.
4. The Pasatiempo wells contain low levels of arsenic. While your drinking water meets the federal and state standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the cost of removing arsenic from drinking water. The U.S. Environmental Protection Agency continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems. The Pasatiempo wells combined accounted for approximately 18% of water production for the SLVWD system in 2022.

SLVWD System Water Quality Testing Results

(Service area includes: Boulder Creek, Brookdale, Ben Lomond, Lompico, Zayante and the Scotts Valley areas of Lockwood Ln, Whispering Pines, Hidden Glenn and Manana Woods.)

Contaminants Regulated by a Primary Drinking Water Standard:

	PHG or MCLG	MCL	Average	Range of Detection	Sample Date	Typical Sources of Contamination
Arsenic (ppb) ⁴	0.6	10	4.5	<2.0-5.2	2022	Erosion of natural deposits.
Nitrate as Nitrogen (ppm)	10	10	0.5	<0.4-2.3	2022	Runoff/leaching from natural deposits.
	PHG or MCLG	MCL	Range of Detection	Highest Measurement	Sample Date	Typical Sources of Contamination
Turbidity (NTU)	N/A	TT=95% of samples ≤ 0.2 NTU	≤0.2 in 100% of samples	0.19	2022	Soil runoff. Turbidity is a measure of the cloudiness of water. We monitor it because it is a good indicator of the effectiveness of our filtration system.

Contaminants Regulated by a Secondary Drinking Water Standard:

	PHG or MCLG	Secondary MCL	Average	Range of Detection	Sample Date	Typical Sources of Contamination
Chloride (ppm)	N/A	500	7.3	5.9-9.6	2021-2022 ¹	Runoff/leaching from natural deposits.
Sulfate (ppm)	N/A	500	42	6-260	2021-2022 ¹	Runoff/leaching from natural deposits.
Total Dissolved Solids (ppm)	N/A	1000	190	100-650	2021-2022 ¹	Runoff/leaching from natural deposits.
Iron (ppb) ²	N/A	300	<100	<100-1200	2021-2022 ¹	Runoff/leaching from natural deposits.
Manganese (ppb) ²	N/A	50	42	<20-160	2021-2022 ¹	Leaching from natural deposits.

Disinfection Residual and Disinfection By-Products:

	PHG or [MRDLG]	MCL or [MRDL]	Average	Range of Detection	Sample Date	Typical Sources of Contamination
Free Chlorine (ppm)	[4]	[4]	1.03	0.14-2.7	2022	Drinking water disinfectant added for treatment.
Total Trihalomethanes (ppb)	N/A	80	20	3-36	2022	By-product of drinking water disinfection.
Haloacetic Acids as HAA6 (ppb)	N/A	60	12	<1-27	2022	By-product of drinking water disinfection.

Lead and Copper Monitoring:

	PHG	AL	Number of Sites Exceeding AL	90th Percentile Level Detected	Sample Date	Typical Sources of Contamination
Lead (ppb)	0.2	15	0 of 51 Samples Collected	<5.0	2020	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits.
Copper (ppm)	0.3	1.3	0 of 51 Samples Collected	0.65	2020	Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives.

Contaminants With Notification Levels:

	NL	Average	Range of Detection	Sample Date
Perfluorooctanesulfonic acid [PFOS] (ppt) ³	6.5	<2.0	<2.0-2.3	2022

Other Monitoring Results:

	Average	Range of Detection	Sample Date	Typical Source of Contamination
Hardness (ppm)	108	52-460	2021-2022 ¹	Hardness is the sum of the major cations, primarily calcium and magnesium. The cations are usually naturally occurring.
Sodium (ppm)	12	10-18	2021-2022 ¹	Sodium refers to the salt present in the water and is generally naturally occurring.

SLVWD-Felton System Water Quality Testing

(Service area includes the Town of Felton, Felton Empire Grade, Felton Grove, San Lorenzo Ave and El Solyo Heights.)

Contaminants Regulated by a Primary Drinking Water Standard:

	PHG or [MCLG]	MCL	Average	Range of Detection	Sample Date	Typical Sources of Contamination
Fluoride (ppb)	1000	2000	<100	<100-120	2022	Erosion of natural deposits.
Gross Alpha particle activity (pCi/L)	0	15	<3.0	<3.0-4.3	2014 ¹	Erosion of natural deposits.

Additional Contaminants Regulated by a Primary Drinking Water Standard:

	PHG or [MCLG]	MCL	Range of Detection	Highest Measurement	Sample Date	Typical Sources of Contamination
Turbidity (NTU)	N/A	TT=95% of samples ≤ 0.2 NTU	≤0.2 in 100% of samples	0.1	2022	Soil runoff. Turbidity is a measure of the cloudiness of water. We monitor it because it is a good indicator of the effectiveness of our filtration system.

Contaminants Regulated by a Secondary Drinking Water Standard:

	PHG or [MCLG]	Secondary MCL	Average	Range of Detection	Sample Date	Typical Sources of Contamination
Chloride (ppm)	N/A	500	9.5	8.2-11	2022	Runoff/leaching from natural deposits.
Sulfate (ppm)	N/A	500	11	9.7-13	2022	Runoff/leaching from natural deposits.
Total Dissolved Solids (ppm)	N/A	1000	243	140-300	2022	Runoff/leaching from natural deposits.

Disinfection Residual and Disinfection By-Products:

	PHG or [MRDLG]	MCL or [MRDL]	Average	Range of Detection	Sample Date	Typical Sources of Contamination
Free Chlorine (ppm)	[4]	[4]	0.91	0.49-1.7	2022	Drinking water disinfectant added for treatment.
Total Trihalomethanes (ppb)	N/A	80	20	10-30	2022	By-product of drinking water disinfection.
Haloacetic Acids as HAA5 (ppb)	N/A	60	11	6-16	2022	By-product of drinking water disinfection.

Lead and Copper Monitoring:

	PHG	AL	Number of Sites Exceeding AL	90th Percentile Level Detected	Sample Date	Typical Sources of Contamination
Lead (ppb)	0.2	15	0/21	<5.0	2020	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits.
Copper (ppm)	0.3	1.3	0/21	0.37	2020	Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives.

Other Monitoring Results:

	Average	Range of Detection	Sample Date	Typical Source of Contamination
Hardness (ppm)	218	110-290	2022	Hardness is the sum of the major cations, primarily calcium and magnesium.
Sodium (ppm)	9.1	7.1-10	2022	Runoff/leaching from natural deposits.

The SLVWD hopes this Consumer Confidence Report is of value to you. If you have any questions about your water quality or on interpreting the data of this report, please contact:

Jesse Guiver, Water Quality and Treatment Manager

13060 Hwy 9
Boulder Creek, CA 95006
Phone: (831)216-9019
Email: jguiver@slvwd.com

The Board of Directors of the SLVWD invite you to attend its meeting to express your views and opinions. Regularly scheduled Board meetings are on the 1st and 3rd Thursdays of every month. Meetings start at 5:30 PM. Please visit the SLVWD's calendar for meeting information at:

www.slvwd.com/calendar.

SLVWD 2022 Consumer Confidence Report

IMPORTANT WATER QUALITY INFORMATION

Consumer Confidence Report

The 2022 San Lorenzo Valley Water District Consumer Confidence Report is now available! Please go to our website or, https://www.slvwd.com/sites/g/files/vyhlif1176/f/uploads/slvwd_410014_slvwd-felton_410002_2022_ccr.pdf

To obtain a paper copy of the 2022 Consumer Confidence Report contact the San Lorenzo Valley Water District at (831) 338-2153.

This Notice contains instructions for you to obtain important information about your drinking water. Translate it, or speak with someone who understands it.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse San Lorenzo Valley Water District a 13060 Hwy 9, Boulder Creek CA 95006, (831) 338-2153 para asistirlo en español.

San Lorenzo Valley Water District operates two (2) independent water distribution systems. The two water systems are the SLVWD System and the SLVWD-Felton System. You can determine which system provides your water service by reviewing your individual Route No. located on your water bill.

Route Numbers 23-29 denotes the SLVWD-Felton System
Route Numbers 11-22 and 30-97 denotes the SLVWD System

For example; Route 32 receives water service from the SLVWD System, while Route number 26 receives water service from the SLVWD-Felton System.

For additional information regarding water quality, please contact the San Lorenzo Valley Water District's, Water Quality and Treatment Manager, Jesse Guiver, at (831) 216-9019 or e-mail to jguiver@slvwd.com.

To obtain a paper copy of the 2022 Consumer Confidence Report contact the San Lorenzo Valley Water District at (831) 338-2153.

This Notice contains instructions for you to obtain important information about your drinking water. Translate it, or speak with someone who understands it.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse San Lorenzo Valley Water District a 13060 Hwy 9, Boulder Creek CA 95006, (831) 338-2153 para asistirlo en español.

San Lorenzo Valley Water District operates two (2) independent water distribution systems. The two water systems are the SLVWD System and the SLVWD-Felton System. You can determine which system provides your water service by reviewing your individual Route No. located on your water bill.

Route Numbers 23-29 denotes the SLVWD-Felton System

Route Numbers 11-22 and 30-97 denotes the SLVWD System

For example; Route 32 receives water service from the SLVWD System, while Route number 26 receives water service from the SLVWD-Felton System.

For additional information regarding water quality, please contact the San Lorenzo Valley Water District's, Water Quality and Treatment Manager, Jesse Guiver, at (831) 216-9019 or e-mail to jguiver@slvwd.com.

NEWS STREAMS

SLVWD MONTHLY BULLETIN

2022 Consumer Confidence Report is out

In case you missed it, the San Lorenzo Valley Water District released its [2022 Consumer Confidence Report](#) in May!

The report is produced by the District annually to inform consumers about the quality and safety of their drinking water. CCRs are mandated by the United States Environmental Protection Agency (EPA) under the Safe Drinking Water Act.

The main purpose of CCRs is to ensure transparency and promote public awareness regarding the water quality and potential contaminants that may be present in the drinking water supply. These reports provide detailed information about water sources, treatment processes, testing results and any violations or concerns related to water quality.

The SLVWD CCRs provide valuable information regarding the District's water sources, treatment methods and the presence of any contaminants. They outline the district's commitment to meeting or exceeding drinking water standards set by the EPA and the California Department of Public Health.

FEMA assesses damaged infrastructure in San Lorenzo Valley Water District

In the aftermath of a devastating series of atmospheric storms that struck the region earlier in the year, representatives from the Federal Emergency Management Agency (FEMA) visited the San Lorenzo Valley Water District in May to assess the impacted infrastructure.

The primary focus of FEMA's visit was to evaluate the District's water treatment facilities, distribution systems, pipelines and storage tanks, to determine the level of damage caused by the disaster. FEMA collaborated with District engineering and operations staff. The local knowledge provided by District staff played a vital role in guiding FEMA's assessment and facilitating effective long-term decision-making.

FEMA's visit to the San Lorenzo Valley Water District serves as a crucial step toward providing appropriate funding to address damages in the region.

Fall Creek Fish Ladder rebuilding will enhance fish passage and operational efficiency

The San Lorenzo Valley Water District has begun work to rebuild the Fall Creek Fish Ladder! The reconstruction aims to improve fish passage, enhance operational conditions and contribute to the overall health of the Fall Creek watershed. The project, which has received approval from regulatory agencies, highlights SLVWD's commitment to environmental stewardship and sustainable management practices.

Owned and operated by SLVWD since 2008, the existing Fall Creek Fish Ladder was constructed three decades ago. However, its design, particularly the jump heights, has been identified as unsuitable for salmonid passage. Previous attempts to modify the ladder did not meet required standards and failed to address operational inefficiencies. Consequently, SLVWD has undertaken the task of rebuilding the fish ladder to rectify these

deficiencies.

Carly Blanchard, the District's Environmental Programs Manager, along with two biologists, were out on the creek and relocated more than 10 fish prior to any creek bypass and draining work that needs to happen so crews can start rebuilding.

Improving the Fall Creek Fish Ladder will have a positive impact on the Fall Creek watershed, benefiting not only salmonoid species but also the overall

health and vitality of the aquatic habitats.

Remembering Josh Wolff

Josh Wolff, Engineering Manager for the San Lorenzo Valley Water District, passed away unexpectedly on June 8.

He was a beloved team member of our team who was leading fire and storm recovery efforts. Josh will be missed. [Read more about Josh's life.](#)
