Central Water District 2024 Newsletter 2023 Water Quality Report

The Central Water District's Mission Statement: To provide our customers with the highest quality drinking water, the lowest water rates, and the best customer service.

Greetings Central Water District Customers! The Central Water District is proud to announce another successful year of water system maintenance and improvements, compliance, and top-quality drinking water distribution.

Some of the District's most memorable accomplishments this year include: Maintenance District Tank replacement, Morrison Tank upgrades/repairs, securement of a permit and power service for the District's new well, flushing of the District's distribution lines to ensure excellent water quality, and meter replacement program progress, which allowed for the update/upgrade of approximately 90 customers' meters, encoders, and/or endpoints.

Survey says! The Central Water District has also been busy collecting service line information at a majority of its 826 connection locations, in order to meet the U.S. Environmental Protection Agency and State Water Board's October 16, 2024 Lead Service Line Inventory deadline. The purpose of this project is to ensure that the District's water service lines and connectors as well as customers' water lines are compliant. In order to make sure that the District has the most accurate and up-to-date information, we need your help! Please visit our website at www.centralwaterdistrict.us.com/survey to complete a quick survey about your property's water connection and set-up. Additional information about this project is also available at the above link. In all, the District is grateful for your contributions throughout the year. Whether it be attending our monthly Board meetings, alerting the District about potential water leaks, or participating in the District's projects and surveys, you are appreciated!

Thank you once again for allowing us to serve you,

Central Water District Board of Directors & Staff

2024 BOARD OF DIRECTORS

Board President: John Benich Board Vice President: Marco Romanini
Secretary of the Board: Robert Marani Board Director: Robert Postle
Board Director: Frances Basich Whitney

NEW MEETING TIMES! Regular board meetings are now scheduled on the third Wednesday of each month at 6:00 p.m., and are held at the District Office located at 400 Cox Road in Aptos. However, if the third Wednesday of the month is a holiday, the meeting will be held on the Thursday following the third Wednesday of the month.

For more information call (831)688-2767 or visit our website at www.centralwaterdistrict.us.com.

Central Water District 2023 Water Quality Report

ATENCIÓN RESIDENTES! Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Central Water District a (831)688-2767 para asistirlo en español.

DRINKING WATER STANDARDS are established by the U.S. Environmental Protection Agency (U.S. EPA) and the State Water Resources Control Board (State Water Board) to ensure that your tap water is safe to drink. These standards limit the amount of certain contaminants in water that is provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water, that provide the same protection for public health. The Central Water District's drinking water is regularly tested, and results consistently show that regulated constituents are either not detected, or are present in amounts below the limits permitted by state and federal requirements. These tests monitor your tap water for contaminants including microbial organisms, minerals, metals, organic substances, radioactivity, and pesticides that could cause disease or adverse health effects. This Water Quality Report communicates whether there is a detectable presence of certain constituents in your drinking water, and provides the levels detected. In the tables on the following pages, you will find the most recent testing information for the water that comes from your tap. Generally, only substances that are detected in the water are listed in the tables. However, some "not detectable" results were added to the tables for your information. At the same time, the presence of contaminants in the water does not necessarily indicate that the water poses a health risk. This report shows the results of our monitoring for the period of January 1 to December 31, 2023, and may include earlier monitoring data.

In all, the Central Water District is proud to report that in 2023 all established drinking water standards were met.

Terms Used in this Report

The below information is being provided to help you understand the terms used in this Consumer Confidence Report (CCR).

DEFINITIONS

Maximum Contaminant Level (MCL)

The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG) The level of a contaminant in drinking water below which there is no known or expected risk to health.
MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

Maximum Residual Disinfectant Level (MRDL) The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS) MCLs and MRDLs for contaminants that affect health, along with their monitoring and reporting requirements, and water treatment requirements.

Public Health Goal (PHG) The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Regulatory Action Level (AL) The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Secondary Drinking Water Standards (SDWS) MCLs for contaminants that affect taste, odor, or appearance of drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

ACRONYMS

AL - Regulatory Action Level
MCL - Maximum Contaminant Level
MCLG - Maximum Contaminant Level Goal
mg/L - Milligrams per liter or parts per
million (ppm). Equivalent to 1 drop in 14

MRDL - Maximum Residual Disinfectant Level

gallons or 1 second in 11.5 days.

MRDLG - Maximum Residual Disinfectant Level Goal

NA - Not Applicable

ND - Not Detectable at testing limit ng/L - Nanograms per liter or parts per trillion (ppt). Equivalent to 1 drop in 14,000,000 gallons or 1 second in nearly 32,000 years.

NTU - Nephelometric Turbidity Unit pCi/L - Picocuries per liter (a measure of radiation)

PHG - Public Health Goal

ppb – Parts per billion or micrograms per liter (μg/L)

ppm - Parts per million or milligrams per liter (mg/L)

RAA - Running Annual Average

µg/L - Micrograms per liter or parts per
billion (ppb). Equivalent to 1 drop in 14,000
gallons or 1 second in nearly 32 years.

The general sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material. It can also pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.

Radioactive contaminants, that can be naturallyoccurring or be the result of oil and gas production and mining activities.

Central Water District's water is sourced from three groundwater wells—Well 4, Well 10, and Well 12. These wells are located in our service area, and are sourced by the Aromas Red Sands and Purisima aguifers.

DRINKING WATER SOURCE ASSESSMENT INFORMATION

Assessment of the Central Water District's drinking water sources was completed in 2009. Our water sources are considered most vulnerable to the following facilities/activities, associated with contaminants detected in the water supply: septic systems (low and high density) and fertilizer applications. Our water sources are also considered most vulnerable to the following facilities/activities, not associated with any detected contaminants: office building complexes, sewer collection systems, housing (high density), well water supply, transportation corridors (freeway and roads/streets), RV ministorage facilities, and veterinary offices/ clinics. A copy of the full report is available at the District office.

Central Water District 2023 Water Quality Report

Detection of Microbiolog				nty Report				
Microbiological Contaminants	Number Collected in 2023	Highest Number of Detections	Number of Months in Violation	MCL	MCLG	Typical Source of Bacteria		
Total Coliform Bacteria	36	0 (in a month)	0	NA	NA	Naturally present in the environment		
E. coli (State Revised Total Coliform Rule)	36	0 (in the year)	0	Footnote 1	0	Human and animal fecal waste		
Residential Tap Monitor	ing for Lea	d and Copper	(Samples	Taken in	July 20	22)		
Lead and Copper (reporting units)	Number of Samples Collected	90 th Percentile Level Detected	Number of Sites Ex- ceeding AL	AL	PHG	Typical Source of Contaminant		
Lead (µg/L)	10	6	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits		
Copper (mg/L)	10	0.413	0	1.3	0.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives		
Sodium and Hardness								
Chemical or Constituent (reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	PHG or (MCLG)	Typical Source of Contaminant		
Sodium (ppm)	6/6/23	26	24 - 28	None	None	Salt present in the water; generally naturally occurring		
Hardness (ppm)	6/6/23	223	220 - 230	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium; usually naturally occurring		
Detection of Contaminar	nts with Pri	imary Drinkin	g Water St	andards				
Chemical or Constituent (reporting units)	Sample Date	Level Detected	Range of Detections	MCL or [MRDL]	PHG, (MCLG) or [MRDLG]	Typical Source of Contaminant		
Disinfection Byproducts	<u>'</u>							
Total Trihalomethanes [TTHMs] (µg/L)	8/29/23	5.5 (Highest)	3.2 - 5.5	80	NA	Byproduct of drinking water disinfection		
Sum of 5 Haloacetic Acids [HAA5] (µg/L)	8/29/23	ND	ND	60	NA	Byproduct of drinking water disinfection		
Disinfection Residual								
Chlorine Residual (mg/L)	2023	0.21 (Highest RAA)	0.11 - 1.3	[4.0] as Cl ₂	[4] as Cl ₂	Drinking water disinfectant added for treatment		
Organics & Inorganics								
Total Chromium (μg/L)	6/6/23	8.3 (Average)	5.4 - 10	50	(100)	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits		
Nitrate—as Nitrogen [N] (mg/L)	2023	3.6 (Average)	1.0 - 6.0	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits		
1,2,3 - Trichloropropane [TCP] (ng/L)	6/08/21	ND	ND	5	0.7	Discharge from industrial and agricultural chemical factories; leaching from hazardous waste sites; used as a cleaning and maintenance solvent, paint and varnish remover, and cleaning and degreasing agent; byproduct during the production of other compounds and pesticides.		
Fluoride (mg/L)	6/6/23	0.11 (Average)	0.10 - 0.12	2.0	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories		
Radioactive Constituents	"			l.				
Radium 226 (pCi/L)	2/20/19	0.007 (Average)	0 - 0.021	NA	0.05	Erosion of natural deposits		
Radium 228 (pCi/L)	2/20/19	0.000 (Average)	0.000	NA	0.019	Erosion of natural deposits		
Combined Radium 226 & 228 (pCi/L)	2/20/19	0.007 (Average)	0 - 0.021	5	NA ²	Erosion of natural deposits		
Gross Alpha (pCi/L)	6/7/23	0.639 (Average)	0.450-0.965	15	(0)	Erosion of natural deposits.		

¹ Routine & repeat samples are total coliform-positive & either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*. ² See individual Radium 226 & Radium 228 constituent PHGs

Central Water District 2023 Water Quality Report

Detection of Contaminants with Secondary Drinking Water Standards								
Chemical or Constituent (reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	Typical Source of Contaminant			
Chloride (mg/L)	6/6/23	29	24 - 35	500	Runoff / leaching from natural deposits; seawater influence			
Color (Units)	2023	ND	ND	15	Naturally-occurring organic materials; oxidized iron and manganese			
Iron (μg/L)	6/6/23	ND	ND	300	Leaching from natural deposits; industrial wastes			
Manganese (μg/L)	6/6/23	ND	ND	50	Leaching from natural deposits			
Odor-Threshold (Units)	2023	ND	ND	3	Naturally-occurring organic materials			
pH (pH Units)	2023	7.4	7.2 - 7.7	6.5-8.5 (U.S. EPA)	Measure of the acidity or basicity			
Specific Conductance (µS/cm)	6/6/23	513	490 - 540	1,600	Substances that form ions when in water; seawater influence			
Sulfate (mg/L)	6/6/23	43	41 - 45	500	Runoff / leaching from natural deposits; industrial wastes			
Turbidity (NTU)	2023	0.49	ND - 4.1	5	Soil runoff; flushing of water mains			
Zinc (mg/L)	6/6/23	0.02	ND - 0.05	5.0	Runoff / leaching from natural deposits; industrial wastes			
Total Dissolved Solids [TDS] (mg/L)	6/6/23	337	310 - 350	1,000	Runoff / leaching from natural deposits			
Detection of Unregulate	d Constitu	ents Monitor	ing					
Chemical or Constituent (reporting units)	Sample Date	Average Level Detected	Range of Detections	Notification Level	Typical Source of Contaminant / Health Effects			
Hexavalent Chromium [Chromium-6] (μg/L)	2023	8.7	6.0 - 11	NA	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits			
Boron (µg/L)	6/16/20	40	33 - 48	1,000	Boron exposures resulted in decreased fetal weight (developmental effects) in newborn rats.			

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

SOME PEOPLE MAY BE MORE VULNERABLE TO CONTAMINANTS IN DRINKING WATER THAN THE GENERAL POPULATION. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water, from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

If present, elevated levels of **LEAD** can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Central Water District is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure, is available from the Safe Drinking Water Hotline (1-800-426-4791) or at http://www.epa.gov/lead.

The District detected **NITRATE**, as Nitrogen (N), at a maximum level of **6.0 mg/L**, which is less than the MCL of 10 mg/L. Nitrate in drinking water at levels above 10 mg/L is a health risk for infants less than six (6) months of age. Such Nitrate levels in drinking water can interfere with the capacity of an infant's blood to carry oxygen, resulting in serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should seek advice from your health care provider. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity.

CHROMIUM is a naturally occurring metallic element found in rocks, soils, plants, and animals. The most common forms are Chromium-3 and Chromium-6. Chromium-3 is found in foods and is an essential dietary nutrient. Chromium-6 can be toxic if consumed in large amounts. The Chromium-6 detected in our water supply is naturally occurring. There was no industrial spill or discharge. Scientists have estimated that up to 80% of the drinking water sources in the U.S. could contain Chromium-6.
