

CITY OF FAIRFIELD

Founded 1856 - Incorporated December 12, 1903

DEPARTMENT OF PUBLIC WORKS Water Treatment

August 30, 2023

Yvonne Heaney, Sanitary Engineer
California Department of Drinking Water
Drinking Water Field Operations Branch
850 Marina Bay Parkway Bldg. P, 2nd Fl
Richmond, CA 94804-6403

Re: Consumer Confidence Report Certification
Public Water System Number 4810003

Dear Ms. Heaney:

Please find enclosed the City of Fairfield's Consumer Confidence Report (CCR) Certification form along with a copy of the City's final CCR and supporting documents. If you have any questions or need any additional information, please do not hesitate to call me at (707) 428-7485.

Sincerely,

A handwritten signature in blue ink, appearing to read "M. Hether".

MICHAEL HETHER, P.E.
Assistant Director of Public Works

Attachments Enclosed

cc: Jenell Pratt, Water Quality Laboratory Supervisor

APPENDIX B: eCCR Certification Form (Suggested Format)

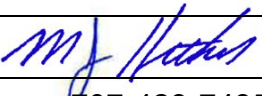

Consumer Confidence Report Certification Form

(To be submitted with a copy of the CCR)

Water System Name:	City of Fairfield
Water System Number:	4810003

The water system named above hereby certifies that its Consumer Confidence Report was distributed on July 1, 2023, to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

Name: Michael Hether	Title: Assistant Public Works Director - Utilities
Signature: 	Date: August 22, 2023
Phone number: 707-428-7485	blank

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

- ☐ CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).
- ☒ CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).
- ☒ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - ☒ Posting the CCR at the following URL: www.fairfield.ca.gov/2022waterreport
 - ☐ Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - ☒ Advertising the availability of the CCR in news media (attach copy of press release)
 - ☒ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - ☒ Posted the CCR in public places (attach a list of locations)
 - ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools

- ☒ Delivery to community organizations (attach a list of organizations)
- ☒ Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
- ☐ Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
- ☐ Other (attach a list of other methods used)
- ☒ *For systems serving at least 100,000 persons:* Posted CCR on a publicly-accessible internet site at the following URL: www.fairfield.ca.gov/2022waterreport
- ☐ *For privately-owned utilities:* Delivered the CCR to the California Public Utilities Commission

Consumer Confidence Report Electronic Delivery Certification

Water systems utilizing electronic distribution methods for CCR delivery must complete this page by checking all items that apply and fill-in where appropriate.

- ☐ Water system mailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available website where it can be viewed (attach a copy of the mailed CCR notification). URL: www._____
- ☒ Water system emailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available site on the Internet where it can be viewed (attach a copy of the emailed CCR notification). URL: www.fairfield.ca.gov/2022waterreport
- ☐ Water system emailed the CCR as an electronic file email attachment.
- ☐ Water system emailed the CCR text and tables inserted or embedded into the body of an email, not as an attachment (attach a copy of the emailed CCR).
- ☐ *Requires prior DDW review and approval.* Water system utilized other electronic delivery method that meets the direct delivery requirement.

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery.

Fairfield ensures delivery to non-electronic customers by including a phone number on every notification announcement as a way for customers to call and request a mailed copy of the report in English, Spanish, or Tagalog.

Fairfield also increased the frequency of a PSA video announcing the report's availability.

This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c) of the California Code of Regulations.

Distribution System

Table 5 – DISINFECTION BYPRODUCTS PRECURSORS, DISINFECTION BYPRODUCTS AND DISINFECTANT RESIDUALS					
Substance	Compliance Ratio		Range	Average	Contaminant Sources
DBP Precursors	More than or equal to 1.0		1.4 – 2.8	2.3	Various natural and man-made sources
Substance (reporting units)	MCL	PHG (MCLG)	Range	Highest Running Annual Average	Contaminant Sources
Trihalomethanes (ppb)	80	NA	20.0 – 75.0	52	By-product of drinking water disinfection
Halacetic Acids (ppb)	60	NA	4.5 – 32.0	17	By-product of drinking water disinfection
Substance (reporting units)	MRDL	MRDLG	Range	Running Annual Average	Contaminant Sources
Chlorine (ppm)	4	4	< 0.10 – 1.57	0.63	Drinking water disinfectant added for treatment

Table 6 – TURBIDITY AS A MEASURE OF FILTER PERFORMANCE					
Substance (reporting units)	MCL	PHG (MCLG)	Entry Point to Distribution System		Contaminant Sources
			NBR	Waterman	
Turbidity (NTU)	TT = 1.0	NA	Maximum = 0.16	Maximum = 0.11	Soil runoff
Measure of the cloudiness of the water.	Percentage of samples ≤ 0.3		100	100	

We monitor turbidity because it is a good indicator of the effectiveness of our filtration system.

Table 7 – DETECTION OF LEAD AND COPPER IN CUSTOMER TAPS						
Substance (reporting units)	AL	PHG	No. of Samples (Collected in 2020)	90th Percentile Detected	No. Sites exceeding AL	Contaminant Sources
Lead (ppb)	15	0.2	50	< 5.0	0	Plumbing corrosion; erosion of natural deposits
Copper (ppm)	1.3	0.3	50	0.121	0	Plumbing corrosion; erosion of natural deposits

Table 8 – DETECTION OF E. Coli – REVISED TOTAL COLIFORM RULE					
Substance	MCL	MCLG	Distribution System	Contaminant Sources	
E. coli	0	0	0	Human and animal fecal waste	

ABBREVIATIONS AND DEFINITIONS

AL – Action Level: The concentrations of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

MCL – Maximum Contaminant Level: The highest level of a contaminant allowed in drinking water. Primary MCLs are set as close to the PHGs or (MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

MCLG – Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. Set by U.S. Environmental Protection Agency.

MRDL – Maximum Residual Disinfectant Level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG – Maximum Residual Disinfectant Level Goal: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do

not reflect the benefits of the use of disinfectants to control microbial contaminants.

NA – Not Applicable ND – Not Detected.

NL – Notification Level.

PHG – Public Health Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Ppb – Parts per billion: or micrograms per liter (µg/L).

Ppm – Parts per million: or milligrams per liter (mg/L).

TT – Treatment Technique: A required process intended to reduce a contaminant in drinking water.

µS/cm – microsiemens per centimeter.

PDWS – Primary Drinking Water Standards: MCLs, MRDLs, and treatment techniques (TTs) for contaminants that affect health, along with their monitoring and reporting requirements.

Upcoming Monitoring Orders

Microplastics

Studies of rodents exposed to some types of microplastics through drinking water indicate potentially adverse effects, including on the reproductive system. However, more research is needed to understand potential human health implications and at what concentrations adverse effects may occur. Therefore, California is monitoring microplastics in drinking water to understand its occurrence and is supporting ongoing research. The City of Fairfield has been selected to monitor for microplastics during Phase 1 of a statewide plan (tentatively Winter 2023 – Winter 2025).

Per and Polyfluoroalkyl Substances (PFAS)

PFAS are a group of manufactured chemicals that have been used in industry and consumer products since the 1940s. PFAS can be present in drinking water. Current scientific research suggests that exposure to certain PFAS may lead to adverse health outcomes. Under the Fifth Unregulated Contaminant Monitoring Rule (UCMR5), the City of Fairfield will monitor for one year, twenty-nine Per and Polyfluoroalkyl Substances .

Water Quality Concerns

Lead — If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Fairfield is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water hotline or at <https://www.epa.gov/lead>.

Triennially, the City of Fairfield collects samples at consumer taps to identify levels of lead in drinking water that may result from corrosion of lead-bearing components in the water system’s distribution system or in household plumbing. Compliance was met with the latest round of testing. The next round of testing will commence in 2023.

Security — The City of Fairfield has performed a comprehensive vulnerability assessment for the water system resources. If you should see items of concern or notice anything suspicious, please contact the City of Fairfield at **(707) 434-6100**.

Sensitive Populations — Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water hotline **(800) 426-4791**.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse the City of Fairfield a (707) 437-5397 para asistirlo en español.

City of Fairfield, Public Works Department, 1000 Webster Street, Fairfield, CA

Public input on drinking water issues is encouraged. You are welcome to attend a City Council meeting and have your voice heard. Meetings are held the 1st and 3rd Tuesday of each month at 6 p.m. in the Fairfield City Council Chamber at 1000 Webster Street.

Consumer Confidence Report

The City of Fairfield is pleased to provide the 2022 Water Quality Report. We are committed to providing high-quality drinking water that meets or surpasses State and Federal health standards. This annual report includes important information and provides an educational opportunity to understand where your water comes from, what it contains, and the measures we take for the protection of public health.

In order to ensure that tap water is safe to drink, the US Environmental Protection Agency (USEPA) and the State Water Resources Control Board – Division of Drinking Water (State) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Water Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

The tables in this document list the drinking water contaminants detected for the period January 1 - December 31, 2022 and show how they compare to State and USEPA standards. The State allows us to monitor some contaminants less than once per year because the concentrations of these contaminants change infrequently. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA’s Safe Drinking Water hotline (1.800.426.4791).

This annual report includes important information and provides an educational opportunity to understand where your water comes from, what it contains, and the measures we take for the protection of public health.

Federally Required Information on Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- ▶ Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- ▶ Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- ▶ Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- ▶ Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural applications, and septic systems.
- ▶ Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

Treated Water

Table 1 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD					
Substance (reporting units)	MCL	PHG	Drinking Water		Contaminant Sources
			Range	Average	
Aluminum (ppm)	1	0.6	< 0.02 – 0.09	0.06	Erosion of natural deposits; residue from some surface water treatment processes.
Fluoride (ppm)*	2	1	0.62 – 0.83	0.72	Erosion of natural deposits; water additive that promotes strong teeth.
Arsenic (ppb)	10	0.004	<0.001 – 2.1	0.70	Erosion of natural deposits; runoff from orchards; glass and electronics
Nitrate (as Nitrogen) (ppm)	10	10	<0.05 – 0.65	0.18	Runoff and leaching from fertilizer use, septic tanks, and sewage; erosion of natural deposits

*The City of Fairfield treats your water by adding fluoride to the naturally occurring level to help prevent dental caries in consumers. State regulations require the fluoride levels in the treated water be maintained within a range of 0.6 and 1.2 ppm.

Table 2 – DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD					
Substance (reporting units)	MCL	PHG (MCLG)	Drinking Water		Contaminant Sources
			Range	Average	
Aluminum (ppb)	200	NA	30 – 120	69	Erosion of natural deposits; residual from some surface water treatment processes.
Chloride (ppm)	500	NA	9.5 – 20	13	Runoff/leaching from natural deposits; seawater influence.
Odor – Threshold	3	NA	N/A	1.4	Naturally-occurring organic materials.
Specific Conductance (µS/cm)	1600	NA	240 – 521	387	Substances that form ions when in water; seawater influence.
Sulfate (ppm)	500	NA	25 – 86	43	Runoff/leaching from natural deposits; industrial wastes.
Total Dissolved Solids (ppm)	1000	NA	209 – 315	220	Runoff/leaching from natural deposits.
Turbidity (Units)	5	NA	0.03 – 0.89	0.05	Soil runoff.

Table 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS					
Substance (reporting units)	MCL	PHG (MCLG)	Drinking Water		Contaminant Sources
			Range	Average	
Hardness (ppm)	NA	NA	72 – 229	162	It is the sum of cations present in the water, generally magnesium and calcium. They are usually naturally occurring.
Sodium (ppm)	NA	NA	12 – 38	20	Generally naturally occurring and refers to the salt present in the water.

Table 4 – State Contaminants with Notification Levels – PFAS/PFOS				
Substance (reporting units)	NL	PHG (MCLG)	Drinking Water	Health Effects
			Result	
Perfluorooctanoic Acid (ng/L)	5.1	NA	< 2.0	Perfluorooctanoic acid exposures resulted in increased liver weight and cancer in laboratory animals.
Perfluorooctanesulfonic Acid (ng/L)	6.5	NA	< 2.0	Perfluorooctanesulfonic acid exposures resulted in immune suppression and cancer in laboratory animals.

Source Water

Fairfield’s source water originates from Lake Berryessa and the Sacramento Delta. Water is transported for treatment through the Putah South Canal and the North Bay Aqueduct. Treatment of source water is divided between two conventional water treatment plants, the Waterman Treatment Plant and the North Bay Regional Water Treatment Plant (NBR is jointly owned by the Cities of Fairfield and Vacaville).

Source Water Assessments

Source Water Assessments are studies or reports that generate information about potential contaminant sources. Source Water Assessments and Watershed Sanitary Surveys are conducted for the purpose of investigating potential contaminating activities which may affect the vulnerability/susceptibility of contamination to source water(s).

Lake Berryessa: A Source Water Assessment, completed in 2017, shows that the most significant potential sources of contamination are illegal activities, unauthorized dumping, herbicide application and agricultural drainage. The most recent sanitary survey was completed in 2018.

Sacramento-San Joaquin Delta: A Source Water Assessment, completed in 2016, shows that the most significant potential sources of contamination are recreational use, urban and agricultural runoff, grazing animals, and herbicide application. The most recent sanitary survey was completed in 2021.

A copy of the complete assessments and associated vulnerability summaries can be obtained through the State Water Resources Control Board – Division of Drinking Water, San Francisco District Office, 850 Marina Bay Parkway, Building P 2nd floor, Richmond, CA 94804- 510.620.3474.

Fairfield to release water quality report

Fairfield, California (Friday, June 30, 2023) - The City of Fairfield released its 2022 Consumer Confidence Report, detailing the quality of tap water as it compares to State Water Resources Control Board and U.S. Environmental Protection Agency standards. The report includes details about where Fairfield's water comes from and what it contains.

Fairfield's drinking water is sourced from Lake Berryessa and the Sacramento-San Joaquin Delta and is treated at the Waterman Water Treatment Plant and the North Bay Regional Water Treatment Plant. Based on a series of tests, the quality of Fairfield's drinking water exceeds almost all industry standards.

The public can view the 2022 Consumer Confidence Report on the website by visiting www.fairfield.ca.gov/2022waterreport. To have a report mailed to your home, please call (707) 437-5387.
