

APPENDIX B: eCCR Certification Form (Suggested Format)

Consumer Confidence Report Certification Form

(To be submitted with a copy of the CCR)

Water System Name:	City of Fairfield
Water System Number:	4810003

The water system named above hereby certifies that its Consumer Confidence Report was distributed on July 1, 2026 (date) to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

Name: Michael Hether	Title: Assistant Public Works Director - Utilities
Signature: <i>Michael Hether</i>	Date: 8/21/2026
Phone number: 707- 428-7425	blank

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

- ☒ CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).
- ☒ CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).
- ☒ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - ☒ Posting the CCR at the following URL: www.fairfield.ca.gov/2025waterreport
 - ☒ Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - ☒ Advertising the availability of the CCR in news media (attach copy of press release)
 - ☒ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - ☒ Posted the CCR in public places (attach a list of locations)

- ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
- ☒ Delivery to community organizations (attach a list of organizations)
- ☐ Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
- ☒ Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
- ☐ Other (attach a list of other methods used)
- ☒ *For systems serving at least 100,000 persons:* Posted CCR on a publicly-accessible internet site at the following URL: www.fairfield.ca.gov/2025waterreport
- ☐ *For privately-owned utilities:* Delivered the CCR to the California Public Utilities Commission

Consumer Confidence Report Electronic Delivery Certification

Water systems utilizing electronic distribution methods for CCR delivery must complete this page by checking all items that apply and fill-in where appropriate.

- ☒ Water system mailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available website where it can be viewed (attach a copy of the mailed CCR notification). URL: www.fairfield.ca.gov/2025waterreport
- ☒ Water system emailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available site on the Internet where it can be viewed (attach a copy of the emailed CCR notification). URL: www.fairfield.ca.gov/2025waterreport
- ☒ Water system emailed the CCR as an electronic file email attachment.
- ☐ Water system emailed the CCR text and tables inserted or embedded into the body of an email, not as an attachment (attach a copy of the emailed CCR).
- ☒ *Requires prior DDW review and approval.* Water system utilized other electronic delivery method that meets the direct delivery requirement.

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery.

Fairfield ensures delivery to non-electronic customers by including a phone number on every notification announcement as a way for customers to call and request a mailed copy of the report in English, Spanish, or Tagalog.
--

*This form is provided as a convenience and may be used to meet the certification
requirement of
section 64483(c) of the California Code of Regulations.*

2025 CITY OF **FAIRFIELD**

CONSUMER CONFIDENCE REPORT

The City of Fairfield is pleased to share the 2025 Consumer Confidence Report. This annual water quality report provides a clear and informative overview of your drinking water—where it comes from, what it contains, and the measures taken to protect public health. We remain committed to providing high-quality drinking water that consistently meets or exceeds State and Federal health standards.

The tables in this report list the water contaminants detected between January 1 and December 31, 2025, and indicate how their levels compare to primary and secondary standards set by the State Water Board and the U.S. Environmental Protection Agency. The sample results show the range of detections and the annual average for each contaminant. No violations or exceedances occurred in 2025.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (U.S. EPA) and the State Water Resources Control Board (State Water Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1.800.426.4791).

FEDERALLY REQUIRED INFORMATION ON DRINKING WATER

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the

land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

CONTAMINANTS THAT MAY BE PRESENT IN SOURCE WATER INCLUDE:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural applications, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

TREATED WATER

Table 1 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD

Substance (reporting units)	MCL	PHG	Drinking Water		Violation	Contaminant Sources
			Range	Average		
Aluminum (ppm)	1	0.6	ND - 0.06	0.04	No	Erosion of natural deposits; residue from some surface water treatment processes
Fluoride (ppm)*	2	1	0.62 - 0.86	0.70	No	Erosion of natural deposits; water additive that promotes strong teeth

*The City of Fairfield treats your water by adding fluoride to the naturally occurring level to help prevent dental caries in consumers. State regulations require the fluoride levels in the treated water be maintained within a range of 0.6 and 1.2 ppm.

Table 2 – DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD

Substance (reporting units)	MCL	PHG (MCLG)	Drinking Water		Violation	Contaminant Sources
			Range	Average		
Aluminum (ppb)	200	NA	25 - 63	39	NO	Erosion of natural deposits; residual from some surface water treatment processes
Chloride (ppm)	500	NA	8.1 - 23	12	NO	Runoff/leaching from natural deposits; seawater influence
Copper (ppb)	1000	NA	1.2 - 130	25	NO	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Odor – Threshold	3	NA	N/A	1.4	NO	Naturally-occurring organic materials
Specific Conductance (µS/cm)	1600	NA	270 - 501	374	NO	Substances that form ions when in water; seawater influence
Manganese (ppb)	50	NA	< 2 - 4.2	4	NO	Leaching from natural deposits
Sulfate (ppm)	500	NA	26 - 66	46	NO	Runoff/leaching from natural deposits; industrial waste
Total Dissolved Solids (ppm)	1000	NA	180 - 280	231	NO	Leaching from natural deposits
Turbidity (Units)	5	NA	0.03 - 0.11	0.06	NO	Soil runoff

Table 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS

Substance (reporting units)	MCL	PHG (MCLG)	Drinking Water		Contaminant Sources
			Range	Average	
Total Hardness (ppm as CaCO ₃)	NA	NA	82 - 219	156	It is the sum of cations present in the water, generally magnesium and calcium. They are usually naturally-occurring.
Sodium (ppm)	NA	NA	12 - 40	24	Generally naturally-occurring and refers to the salt present in the water.

Table 4 – USEPA – UNREGULATED CONTAMINANT MONITORING RULE FIVE (UCMR 5)

Substance (reporting units)	Range	Average	Health Effects
29 per- and polyfluoroalkyl substances (PFAS)	ND in all samples	ND	Industrial processes including firefighting activities; Discharge from manufacturing and industrial chemical facilities; Use of certain consumer products
Lithium	ND in all samples	ND	Weathering of minerals in geologic formations containing lithium salts; Discharge from industrial processes and waste disposal

SOURCE WATER

Fairfield's source water originates from Lake Berryessa and the Sacramento Delta. Water is transported for treatment through the Putah South Canal and the North Bay Aqueduct. Treatment of source water is divided between

two conventional water treatment plants, the Waterman Water Treatment Plant and the North Bay Regional Water Treatment Plant (NBR is jointly owned by the Cities of Fairfield and Vacaville).

SOURCE WATER ASSESSMENTS

Source Water Assessments are studies and reports that generate information about potential contaminant sources. Source Water Assessments and Watershed Sanitary Surveys are conducted for the purpose of investigating potential contaminating activities which may affect the vulnerability/susceptibility of contamination to source water(s). Watershed management practices are implemented to improve water quality and reduce potential contaminant sources.

Lake Berryessa: Significant potential sources of contamination include illegal activities, unauthorized dumping, herbicide application and agricultural drainage. The most recent sanitary survey was completed in 2023.

Sacramento-San Joaquin Delta: Significant potential sources of contamination include recreational use, urban and agricultural runoff, grazing animals, and herbicide application. Updates to the sanitary survey were completed in 2021.

A copy of the complete assessments and associated vulnerability summaries can be obtained through the State Water Resources Control Board – Division of Drinking Water, San Francisco District Office, 850 Marina Bay Parkway, Building P, 2nd floor, Richmond, CA 94804-510.620.3474.

DISTRIBUTION SYSTEM

Table 5 – DISINFECTION BYPRODUCTS PRECURSORS, DISINFECTION BYPRODUCTS AND DISINFECTANT RESIDUALS

Disinfection Byproduct Precursor	Compliance Ratio		Running Annual Average (RAA)		Contaminant Sources
Total Organic Carbon (% Removal Ratio)	More than or equal to 1.0		All RAA $\geq$ 1.00 1.5 - 3.2		Various natural and man-made sources
Disinfection Byproduct (reporting units)	MCL	PHG (MCLG)	Range	Highest Running Annual Average	Contaminant Sources
Trihalomethanes, Total (ppb)	80	NA	20.0 - 82.0	58	By-product of drinking water disinfection
Haloacetic Acids, Sum of HAA5 (ppb)	60	NA	6.4 - 23.0	18	By-product of drinking water disinfection
Disinfectant (reporting units)	MRDL	MRDLG	Range	Running Annual Average	Contaminant Sources
Chlorine, Free Residual as CL_2 (ppm)	4	4	< 0.10 - 1.9	0.54	Drinking water disinfectant added for treatment

Table 6 – TURBIDITY AS A MEASURE OF FILTER PERFORMANCE

Substance (reporting units)	MCL	PHG (MCLG)	Entry Point to Distribution System		Contaminant Sources
			NBR	Waterman	
Turbidity (NTU) <i>Measure of the cloudiness of the water.</i>	TT = 1.0 Percentage of samples $\leq$ 0.3	NA	Maximum = 0.08 100	Maximum = 0.11 100	Soil runoff

Table 7 – DETECTION OF LEAD AND COPPER IN CUSTOMER TAPS

Substance (reporting units)	AL	PHG	No. of Samples (Collected in 2023)	90 th Percentile Detected	No. Sites exceeding AL	Contaminant Sources
Lead (ppb)	15	0.2	50	< 5.0	0	Plumbing corrosion; erosion of natural deposits
Copper (ppm)	1.3	0.3	50	0.170	0	Plumbing corrosion; erosion of natural deposits

Table 8 – DETECTION OF E. coli – REVISED TOTAL COLIFORM RULE

Substance	MCL	MCLG	Distribution System	Contaminant Sources
E. coli	0	0	0	Human and animal fecal waste

ABBREVIATIONS AND DEFINITIONS

AL – Action Level: The concentrations of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

pCi/L – picocuries per liter

MCL – Maximum Contaminant Level: The highest level of a contaminant allowed in drinking water. Primary MCLs are set as close to the PHGs or (MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

MCLG – Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. Set by U.S. Environmental Protection Agency.

MRDL – Maximum Residual Disinfectant Level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG – Maximum Residual Disinfectant Level Goal: The level of a drinking water disinfectant below which there is no known or expected

risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

NA – Not Applicable.

ND – Not Detected.

NL – Notification Level.

PHG – Public Health Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Ppb – Parts per billion: or micrograms per liter ($\mu\text{g/L}$).

Ppm – Parts per million: or milligrams per liter (mg/L).

TT – Treatment Technique: A required process intended to reduce a contaminant in drinking water.

$\mu\text{S/cm}$ – microsiemens per centimeter.

PDWS – Primary Drinking Water Standards: MCLs, MRDLs, and treatment techniques (TTs) for contaminants that affect health, along with their monitoring and reporting requirements.

WATER QUALITY CONCERNS

LEAD — Lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Fairfield is responsible for providing high quality drinking water and removing lead pipes, but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, email the City of Fairfield at leadandcopper@fairfield.ca.gov. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <http://www.epa.gov/safewater/lead>.

Triennially, the City of Fairfield collects samples at consumer taps to identify levels of lead in drinking

water that may result from corrosion of lead-bearing components in the water system's distribution system or in household plumbing.

Compliance was met with the latest round of testing in 2023. The next round of testing will commence in summer of 2026.

LEAD SERVICE LINE INVENTORY - The Fairfield Municipal Utilities completed an initial service line inventory as required by the U.S. EPA. The purpose of the inventory was to identify the material of service lines and fittings, including the customer-owned side of the water service line. For more information on this requirement, please visit www.fairfield.ca.gov/leadandcopper.

To verify the material of your service line or for any other information, please contact staff at **707-428-7485** or email Leadandcopper@fairfield.ca.gov.

SECURITY — The City of Fairfield has performed a comprehensive vulnerability assessment for the water system resources. If you should see items of concern or notice anything suspicious, please contact the City of

Fairfield at **707.434.6100**.

SENSITIVE POPULATIONS — Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1.800.426.4791).

UPCOMING MONITORING ORDERS - MICROPLASTICS

Studies of rodents exposed to some types of microplastics through drinking water indicate potentially adverse effects, including on the reproductive system. However, more research is needed to understand potential human health implications and at what concentrations adverse effects may occur. Therefore, California is monitoring microplastics in drinking water to understand its occurrence and is supporting ongoing research. The City of Fairfield has been selected to monitor microplastics during Phase 1 of a pending statewide plan.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse the City of Fairfield a 707-437-5397 para asistirlo en español.

Ang pag-uulat na ito ay naglalaman ng mahalagang impormasyon tungkol sa inyong inuming tubig. Mangyaring makipag-ugnayan sa City of Fairfield o tumawag sa 707-428-7496 para matulungan sa wikang Tagalog.

Public input on drinking water issues is encouraged. You are welcome to attend a City Council meeting and have your voice heard. Meetings are held the 1st and 3rd Tuesday of each month at 6 p.m. in the Fairfield City Council Chamber at 1000 Webster Street.

*City of Fairfield, Public Works Department,
1000 Webster Street, Fairfield, CA*

FAIRFIELD GOVERNMENT

FAIRFIELD — The city has released its 2025 Water Quality Report, showing no violations for contaminants with primary or secondary contaminants.

The report lists the water contaminants detected between Jan. 1 and Dec. 31, 2025, and indicate how their levels compare to primary and secondary standards set by the State Water Board and the U.S. Environmental Protection Agency. The sample results show the range of detections and the annual average for each contaminant. No violations or exceedances occurred in 2025."

Fairfield gets its water from Lake Berryessa and the Sacramento-San Joaquin Delta. The report references testing at those sources as well. The water is treated at one of two water plants in the city.

The report also addresses lead in water sources, but is not tested for every year. Compliance was met with the latest round of testing in 2025. The next round of testing will commence this summer, the report states.

It also urges residents to be aware of their own responsibilities when it comes to lead sources.

"The city of Fairfield is responsible for providing high quality drinking water and removing lead pipes, but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing," the report states.

"You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water.

"If you are concerned about lead in your water and wish to have your water tested, email the city of Fairfield at leadandcopper@fairfield.ca.gov. Information on lead in drinking water, testing methods and steps you can take to minimize exposure is available at www.epa.gov/safewater/lead.

The public can view the 2025 Consumer Confidence Report on the website by visiting www.fairfield.ca.gov/2025waterreport. To have a report mailed to your home, call 707-437-5587.

Water Quality Reports

These reports show the results of our monitoring for each calendar year. In the City of Fairfield, tap water has met all USEPA and State Drinking Water Health standards. The City of Fairfield has prepared these reports and delivered them as required by law. Included are details about where your water comes from, what it contains, and how it compares to State and Federal standards.
