## **2023 Consumer Confidence Report**

## Water System Information

Water System Name: 4900647 SERENO DEL MAR WATER COMPANY

Report Date: JUNE 2023

Type of Water Source(s) in Use: Ground water under the influence of surface water and 2 side hill well springs.

Name and General Location of Source(s): Surface-influenced wells 3 and 4 are located next to Scotty Creek. Ground water well 9 is located south of the storage tanks. The Carmet north and south springs are east of Carmet. Wells 1, 4B, 5, 6, 7 and 8 are adjacent to Scotty Creek.

Drinking Water Source Assessment Information: Vulnerable. See note at the end of this report.

For More Information, contact: Russian River Utility (Sereno del Mar Water Company), 707-887-7735.

## About This Report

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2023 and may include earlier monitoring data.

# Importance of This Report Statement in Five Non-English Languages (Spanish, Mandarin, Tagalog, Vietnamese, and Hmong)

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse Salmon Creek CSA 41 a 707-887-7735 para asistirlo en español.

这份报告含有关于您的饮用水的重要讯息。请用以下地址和电话联系 Sereno del Mar Water Company 以获得中文的帮助: 707-887-7735.

Ang pag-uulat na ito ay naglalaman ng mahalagang impormasyon tungkol sa inyong inuming tubig. Mangyaring makipag-ugnayan sa Sereno del Mar Water Company o tumawag sa 707-887-7735 para matulungan sa wikang Tagalog.

cáo này chứa thông tin quan trọng về nước uống của bạn. Xin vui lòng liên hệ Sereno del Mar Water Company tại 707-887-7735 để được hỗ trợ giúp bằng tiếng Việt.

Tsab ntawv no muaj cov ntsiab lus tseem ceeb txog koj cov dej haus. Thov hu rau Sereno del Mar Water Company ntawm 707-887-7735 rau kev pab hauv lus Askiv.

# Terms Used in This Report

| Term   | Definition  |
|--|---|
| Level 1 Assessment                                     | A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.   |
| Level 2 Assessment                                     | A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. |
| Maximum Contaminant<br>Level (MCL)                     | The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.            |
| Maximum Contaminant<br>Level Goal (MCLG)               | The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).  |
| Maximum Residual<br>Disinfectant Level<br>(MRDL)       | The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.   |
| Maximum Residual<br>Disinfectant Level Goal<br>(MRDLG) | The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.  |
| Primary Drinking Water<br>Standards (PDWS)             | MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.  |
| Public Health Goal<br>(PHG)                            | The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.  |
| Regulatory Action Level (AL)                           | The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.  |
| Secondary Drinking<br>Water Standards<br>(SDWS)        | MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.   |
| Treatment Technique<br>(TT)                            | A required process intended to reduce the level of a contaminant in drinking water.   |
| Variances and<br>Exemptions                            | Permissions from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.  |
| ND   | Not detectable at testing limit.  |
| ppm  | parts per million or milligrams per liter (mg/L)  |
| ppb  | parts per billion or micrograms per liter (µg/L)  |
| ppt  | parts per trillion or nanograms per liter (ng/L)  |
| ppq  | parts per quadrillion or picogram per liter (pg/L)  |

| Term  | Definition                                    |
|-------|---|
| pCi/L | picocuries per liter (a measure of radiation) |

# Sources of Drinking Water and Contaminants that May Be Present in Source Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

## **Regulation of Drinking Water and Bottled Water Quality**

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

## About Your Drinking Water Quality

### Drinking Water Contaminants Detected

Tables 1, 2, 3, 4, 5, 6, and 8 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

### Table 1. Sampling Results Showing the Detection of Coliform Bacteria

Complete if bacteria are detected.

| Microbiological<br>Contaminants | Highest No.<br>of<br>Detections | No. of<br>Months in<br>Violation | MCL | MCLG | Typical Source<br>of Bacteria      |
|---------------------------------|---------------------------------|----------------------------------|-----|------|------------------------------------|
| E. coli                         | (In the year)<br>[Enter No.]    | [Enter No.]                      | (a) | 0    | Human and<br>animal fecal<br>waste |

(a) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

### Table 2. Sampling Results Showing the Detection of Lead and Copper

Complete if lead or copper is detected in the last sample set.

| Lead and<br>Copper | Sample Date              | No. of<br>Samples<br>Collected | 90 <sup>th</sup> Percentile<br>Level Detected | No. Sites<br>Exceeding AL | AL  | РНС | Typical Source<br>of<br>Contaminant  |
|--------------------|--------------------------|--------------------------------|---|---------------------------|-----|-----|--|
| Lead<br>(ppb)      | 08/27/2022<br>09/01/22   | 6<br>6                         | 0   | 0                         | 15  | 0.2 | Internal corrosion of household water<br>plumbing systems; discharges from<br>industrial manufacturers; erosion of<br>natural deposits |
| Copper<br>(ppm)    | 08/27/2022<br>09/01/2022 | 6<br>6                         | 0.240   | 0                         | 1.3 | 0.3 | Internal corrosion of household<br>plumbing systems; erosion of natural<br>deposits; leaching from wood<br>preservatives               |

| Table 3. | Sampling Results for Sodium and Hardness |
|----------|--|
|----------|--|

| Chemical or<br>Constituent (and<br>reporting units) | Sample<br>Date | Level<br>Detected | Range of<br>Detections | MCL  | PHG<br>(MCLG) | Typical Source of<br>Contaminant  |
|---|----------------|-------------------|------------------------|------|---------------|---|
| Sodium (ppm)  | 9/12/2023      | 18                |                        | None | None          | Salt present in the water<br>and is generally naturally<br>occurring  |
| Hardness (ppm)                                      | 9/12/2023      | 120               | -                      | None | None          | Sum of polyvalent<br>cations present in the<br>water, generally<br>magnesium and calcium,<br>and are usually naturally<br>occurring |

## Table 4. Detection of Contaminants with a Primary Drinking Water Standard

| Chemical or<br>Constituent<br>(and<br>reporting units) | Sample<br>Date                                  | Level<br>Detected                | Range of<br>Detections | MCL<br>[MRDL] | PHG<br>(MCLG)<br>[MRDLG] | Typical Source<br>of<br>Contaminant   |
|--|---|----------------------------------|------------------------|---------------|--------------------------|---|
| Chromium (ppb)   | 9/12/2023                                       | 7                                |                        |               |                          | Discharge from<br>steel and pulp mills<br>and chrome<br>plating; erosion of<br>natural deposits   |
| Fluoride (ppm)<br>Wells 3 & 4                          | 9/12/2023                                       | 0.15                             |                        | 2             | 1                        | Erosion of natural<br>deposits; water<br>additive which<br>promotes strong<br>teeth; discharge<br>from fertilizer and<br>aluminum<br>factories. |
| Gross Alpha<br>Radiological (pCi/L)<br>Well 9 Carmet   | 9/12/2023                                       | 1.54                             | 1.54-2.04              | 10            | (0)                      | Erosion of natural deposits   |
| Haloacetic Acids<br>(HAA5) (ppb)                       | 2/14/2023<br>5/22/2023<br>8/8/2023              | 15.00<br>7.60<br>17.00           | 7.60-17.00             | 60            | N/A                      | Byproduct of<br>drinking water<br>disinfection.   |
| Total Trihalomethanes<br>(TTHM) (ppb)                  | 2/14/2023<br>5/22/2023<br>8/8/2023<br>11/1/2023 | 37.00<br>28.00<br>70.00<br>40.00 | 28.00-70.00            | 80            | N/A                      | Byproduct of<br>drinking water<br>disinfection.   |

## Table 5. Detection of Contaminants with a Secondary Drinking Water Standard

| Chemical or<br>Constituent (and<br>reporting units) | Sample<br>Date | Level<br>Detected | Range of<br>Detections | SMCL | PHG<br>(MCLG) | Typical Source<br>of<br>Contaminant   |
|---|----------------|-------------------|------------------------|------|---------------|---|
| Alkalinity (ppm)                                    | 9/12/2023      | 98                |                        | -    | -             | The primary source<br>of natural alkalinity is<br>carbon dioxide in the<br>atmosphere and in<br>soil gases that<br>dissolve in rain,<br>surface water, and<br>groundwater |
| Arsenic (ppb)                                       |                |                   | 2-3.8                  | 5.0  | -             | Erosion of natural  |
| Well 09 Carmet                                      | 4/4/2023       | 3.6               |                        |      |               | deposits; runoff from   |
|   | 7/17/2023      | 3.8               |                        |      |               | orchards; glass and<br>electronics  |
|   | 9/12/2023      | 2                 |                        |      |               | production wastes   |
|   | 10/3/2023      | 2.5               |                        |      |               |   |

| Bicarbonate<br>Alkalinity (ppm)    | 9/12/2023 | 120 |   |      |   | The primary source of<br>natural alkalinity is<br>carbon dioxide in the<br>atmosphere and in<br>soil gases that<br>dissolve in rain,<br>surface water, and<br>groundwater |
|------------------------------------|-----------|-----|---|------|---|---|
| Calcium (ppm)                      | 9/12/2023 | 32  |   | -    | - | Most calcium in<br>surface waters come<br>from streams flowing<br>over limestone,<br>dolomite, gypsum, and<br>other calcium-<br>containing rocks and<br>minerals.         |
| Chloride (ppm)                     | 9/12/2023 | 25  |   | 500  | - | Runoff/leaching from<br>natural deposits;<br>seawater influence   |
| Color (units)                      | 9/12/2023 | 5   |   | 15   | - | Naturally-occurring organic materials   |
| Magnesium (ppm)                    | 9/12/2023 | 10  | - | -    | - | -   |
| Odor – Threshold<br>(units)        | 9/12/2023 | 1.4 |   | 3    |   | Naturally-occurring organic materials   |
| рН                                 | 9/12/2023 | 7.1 |   | -    | - | Leaching from<br>natural deposits   |
| Specific<br>Conductance<br>(µS/cm) | 9/12/2023 | 310 | - | 1600 | - | Substances that<br>form ions when in<br>water; seawater<br>influence  |
| Sulfate (ppm)                      | 9/12/2023 | 23  | - | 1600 | - | Runoff/leaching from<br>natural deposits;<br>industrial wastes  |
| Total Dissolved<br>Solids (ppm)    | 9/12/2023 | 180 | - | 1000 | - | Runoff/leaching from<br>natural deposits  |
| Turbidity (ntu)                    | 9/12/2023 | 0.2 |   | 5    | - | Soil runoff   |

## Table 6. Detection of Unregulated Contaminants

| Chemical or<br>Constituent (and<br>reporting units) | Sample<br>Date | Level<br>Detected | Range of<br>Detections | Notification<br>Level | Health Effects |
|---|----------------|-------------------|------------------------|-----------------------|----------------|
| None  |                |                   |                        |                       |                |

#### Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Sereno del Mar Water Company is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [Optional: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <a href="http://www.epa.gov/lead">http://www.epa.gov/lead</a>.

Additional Special Language for Nitrate, Arsenic, Lead, Radon, and *Cryptosporidium*: While your drinking water meets the federal and state standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the cost of removing arsenic from drinking water. The U.S. Environmental Protection Agency continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

# Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

#### Table 7. Violation of a MCL, MRDL, AL, TT or Monitoring Reporting Requirement

| Violation | Explanation | Duration | Actions Taken to<br>Correct Violation | Health Effects<br>Language |
|-----------|-------------|----------|---------------------------------------|----------------------------|
| None      |             |          |                                       |                            |

#### For Water Systems Providing Groundwater as a Source of Drinking Water

| Microbiological<br>Contaminants<br>(complete if fecal-<br>indicator detected) | Total No. of<br>Detections | Sample<br>Dates | MCL<br>[MRDL] | PHG<br>(MCLG)<br>[MRDLG] | Typical Source of<br>Contaminant |
|---|----------------------------|-----------------|---------------|--------------------------|----------------------------------|
| E. coli   | 0                          |                 | 0             | (0)                      | Human and animal fecal waste     |
| Enterococci   | 0                          |                 | TT            | N/A                      | Human and animal fecal waste     |
| Coliphage   | 0                          |                 | ТТ            | N/A                      | Human and animal fecal waste     |

#### Table 9. Violation of Groundwater TT

| Violation | Explanation | Duration | Actions Taken to<br>Correct Violation | Health Effects<br>Language |
|-----------|-------------|----------|---------------------------------------|----------------------------|
| None      |             |          |                                       |                            |

#### For Systems Providing Surface Water as a Source of Drinking Water

#### Table 10. Sampling Results Showing Treatment of Surface Water Sources

| Treatment Technique <sup>(a)</sup> (Type of approved filtration technology used)          | Membrane Filtration  |  |  |
|---|--|--|--|
| Turbidity Performance Standards <sup>(b)</sup>  | Turbidity of the filtered water must:                                    |  |  |
| (that must be met through the water treatment process)                                    | 1 – Be less than or equal to 0.10 NTU in 95% of measurements in a month. |  |  |
|   | 2 – Not exceed 0.10 NTU for more than eight consecutive hours.           |  |  |
|   | 3 – Not exceed 1.0 NTU at any time.                                      |  |  |
| Lowest monthly percentage of<br>samples that met Turbidity<br>Performance Standard No. 1. | 99.5   |  |  |
| Highest single turbidity measurement during the year                                      | 0.20   |  |  |
| Number of violations of any surface water treatment requirements                          | NONE   |  |  |

(a) A required process intended to reduce the level of a contaminant in drinking water.

(b) Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.

## Summary Information for Violation of a Surface Water TT

### Table 11. Violation of Surface Water TT

| Violation | Explanation | Duration | Actions Taken to<br>Correct Violation | Health Effects<br>Language |
|-----------|-------------|----------|---------------------------------------|----------------------------|
| None      |             |          |                                       |                            |
