Consumer Confidence Report Certification Form

(To be submitted with a copy of the CCR)

12	
Water System Name:	Valley Home School Pioneer
Water System Number	CA5000277

The water system named above hereby certifies that its Consumer Confidence Report was distributed on $\underline{\mathcal{M}_{arch}}$ $\underline{\mathcal{M}_{arch}}$ $\underline{\mathcal{M}_{arch}}$ $\underline{\mathcal{M}_{arch}}$ $\underline{\mathcal{M}_{arch}}$ (date) to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

Name: Bill Slikker	Title: Jupt
Signature: BWSIN	Date: $3 4 \rangle 23$
Phone number: (204) 847-0117	blank

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

- CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).
- CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).
- "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - Posting the CCR at the following URL: www. vhjsd.org
 - Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - Advertising the availability of the CCR in news media (attach copy of press release)
 - Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - Posted the CCR in public places (attach a list of locations)
 - Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
 - Delivery to community organizations (attach a list of organizations)
 - Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
 - Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
 - Other (attach a list of other methods used)
- For systems serving at least 100,000 persons: Posted CCR on a publicly-accessible internet site at the following URL: www._____
- For privately-owned utilities: Delivered the CCR to the California Public Utilities Commission

2022 Consumer Confidence Report

Water System Name: Valley Home School - Pioneer	r Report Date: 02/26/23				
	tired by state and federal regulations. This report shows the results mber 31, 2022 and may include earlier monitoring data.				
Favor de comunicarse Valley Home School - F	uy importante sobre su agua para beber. Pioneer a (209) 838-7842 para asistirlo en español.				
Type of water source(s) in use: Groundwater Well					
Name & general location of source(s): South (Main) Well	at 13231 Pioneer Ave. Valley Home, CA				
Drinking Water Source Assessment information: Complet	ted in June of 2002 - see next page				
Time and place of regularly scheduled board meetings for public	participation: None				
For more information, contact: Quality Service, Inc.	Phone: (209) 838-7842				
	IN THIS REPORT				
Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary	Primary Drinking Water Standards (PDWS) : MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.				
MCLs are set to protect the odor, taste, and appearance of drinking water. Maximum Contaminant Level Goal (MCLG) : The level of a contaminant in drinking water below which there is no	Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.				
known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).	Treatment Technique (TT) : A required process intended to reduce the level of a contaminant in drinking water.				
Public Health Goal (PHG) : The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.	Regulatory Action Level (AL) : The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.				
Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water.	Variances and Exemptions : State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.				
There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.	ND: not detectable at testing limit				
Maximum Residual Disinfectant Level Goal (MRDLG):	ppm : parts per million or milligrams per liter (mg/L)				
The level of a drinking water disinfectant below which	ppb : parts per billion or micrograms per liter (μ g/L)				
there is no known or expected risk to health. MRDLGs do	ppt : parts per trillion or nanograms per liter (ng/L)				
not reflect the benefits of the use of disinfectants to control	ppq : parts per quadrillion or picogram per liter (pg/L)				
microbial contaminants.	pCi/L : picocuries per liter (a measure of radiation)				

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and Callifornia law also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

*Any violation of an MCL, MRDL, AL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Microbiological Contaminants	Highest No. of Detections	G RESULTS SHOWIN		MCL		MCLG	Typical Source of Bacteria
E. Coli	0	0		(a)		0	Human and animal fecal waste
<i>E. coli</i> -positive routine sam	ple or system	fails to ana	lyze total col	iform-positiv	e repeat s	ample for <i>l</i>	ils to take repeat samples following <i>E. coli</i> . CAD AND COPPER
Lead and Copper (and reporting units)	Sample Date	No. of Samples Collected	90 th Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	Typical Source of Contaminant
Lead (ppb)	10/03/22	5	< 5	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	10/03/22	5	0.3	0	1.3	0.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
	TABLE	3 – SAMPL	ING RESU	LTS FOR SO	DDIUM A	AND HAR	DNESS
Chemical or Constituent (and reporting units)	Sample Date	Level Detected		nge of ections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	08/03/20	24			None	None	Salt present in the water and is generally naturally occurring
Hardness (ppm)	08/03/20	170			None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

Vulnerability Assessment Summary

A source water assessment was conducted for the South Well of the Valley Home School Pioneer water system in June of 2002. The source is considered most vulnerable to the following activities not associated with any detected contaminants: historic gas stations and septic systems - high density. Nitrates have been detected above half of the State established maximum contaminant level (MCL). Additional monitoring for this contaminant is required per State standards.

The following activities are associated with nitrates: injection/dry wells/sumps, septic systems - high density, and animal operations. Barium has been detected below half of the MCL. The following activities are associated with barium: discharge of oil drilling wastes from metal refineries and erosion of natural deposits. For more information regarding the assessment summary, contact Quality Service, Inc. at: (209) 838-7842.

TABLE 4 – DET	FECTION O	F CONTAMIN	ANTS WITH A	PRIMARY	DRINKING	G WATER STANDARD
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Nitrate as Nitrogen (ppm)	10/03/22	6		10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Fluoride (ppm)	08/03/20	0.2		2	1	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Barium (ppm)	08/03/20	0.2		1	2	Discharge of oil drilling wastes and from metal refineries; erosion of natural deposits
TABLE 5 – DETH	ECTION OF	CONTAMINA	NTS WITH A <u>S</u>	ECONDAR	<u>Y</u> DRINKIN	G WATER STANDARD
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	SMCL	PHG (MCLG)	Typical Source of Contaminant
Total Dissolved Solids (ppm)	08/03/20	310		1000	N/A	Runoff/leaching from natural deposits
Specific Conductance (umho/cm)	08/03/20	430		1600	N/A	Substances that form ions when in water; seawater influence
Chloride (ppm)	08/03/20	8		500	N/A	Runoff/leaching from natural deposits; seawater influence
Zinc (ppm)	08/03/20	0.1		5	N/A	Runoff/leaching from natural deposits
Sulfate (ppm)	08/03/20	13		500	N/A	Runoff/leaching from natural deposits' industrial wastes
						Soil runoff

*Any violation of an MCL, MRDL, AL, or TT is asterisked. Additional information regarding the violation is provided below.

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Pioneer School is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at: http://www.epa.gov/lead.

Nitrate as Nitrogen in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate-N levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.
