

## APPENDIX B: eCCR Certification Form (Suggested Format)

### Consumer Confidence Report Certification Form (To be submitted with a copy of the CCR)

Water System Name:	South Fork Estates Mutual Water Company
Water System Number:	CA5403113

The water system named above hereby certifies that its Consumer Confidence Report was distributed on 06/26/2024 to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

Name: Patricia Pliskin	Title: Secretary, SFEMWC
Signature: 	Date: 06/26/2024
Phone number: 559.779.5659	blank

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

- CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).
- CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).
- "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
  - Posting the CCR at the following URL: [www.sfemwc.com](http://www.sfemwc.com)
  - Mailing the CCR to postal patrons within the service area (attach zip codes used)
  - Advertising the availability of the CCR in news media (attach copy of press release)
  - Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
  - Posted the CCR in public places (attach a list of locations)
  - Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools

posted. SFEMWS also sent an announcement that the CCR was available in their email or on the website through our alert message system.

*This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c) of the California Code of Regulations.*

## 2023 Consumer Confidence Report

### Water System Information

Water System Name: **South Fork Estates Mutual Water Company**

Report Date: May 05, 2024

Type of Water Source(s) in Use: **Ground Water Wells**

Name and General Location of Source(s): **Well #1, Well #2, Well#3 in South Fork Estates, Three Rivers, Ca 93271**

### Drinking Water Source Assessment Information:

The source water assessments for wells #1 and #2 (prepared by the Tulare County Health Services in December 2002) and for Well #3 (prepared for us in July 2014 by California Rural Water Association) are available by a submitting a written request to SFEMWC P.O. 597 Three Rivers, CA 93271 or going to our website: [sfemwc.com](http://sfemwc.com)

### Time and Place of Regularly Scheduled Board Meetings for Public Participation:

A meeting for all owners is held on the last Saturday of February each year or if a meeting place is not available on the last Saturday of February, then an alternate date will be set with announcements mailed out well in advance. Owners are notified by mail of the date, time, and location. The Board of Directors meets quarterly or as needed. The date, time, and location may be obtained from any board member, or from the [sfemwc.com](http://sfemwc.com) website.

For More Information Contact: **Patty Pliskin at 559.779.5659**

California State Website for South Fork Estates Mutual Water Company (System No. CA5403113):

[https://sdwis.waterboards.ca.gov/PDWW/JSP/WaterSystemDetail.jsp?tinwsys\\_is\\_number=7498&tinwsys\\_st\\_code=CA](https://sdwis.waterboards.ca.gov/PDWW/JSP/WaterSystemDetail.jsp?tinwsys_is_number=7498&tinwsys_st_code=CA)

### About This Report

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2023 and may include earlier monitoring data.

**Spanish:** Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse South Fork Estates Mutual Water Company, [sfemwc.com](http://sfemwc.com) para asistirlo en español.

Term	Definition
Level 1 Assessment	A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
Level 2 Assessment	A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
Maximum Contaminant Level (MCL)	The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
Maximum Contaminant Level Goal (MCLG)	The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
Maximum Residual Disinfectant Level (MRDL)	The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
Maximum Residual Disinfectant Level Goal (MRDLG)	The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
Primary Drinking Water Standards (PDWS)	MCLs and MRLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.
Public Health Goal (PHG)	The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.
Regulatory Action Level (AL)	The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.
Secondary Drinking Water Standards (SDWS)	MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.
Treatment Technique (TT)	A required process intended to reduce the level of a contaminant in drinking water.
Variances and Exemptions	Permissible from the State Water Resources Control Board (State Board) to exceed an MCL or not comply with a treatment technique under certain conditions.
ND	Not detectable at testing limit.
ppm	parts per million or milligrams per liter (mg/L)
ppb	parts per billion or micrograms per liter (µg/L)
ppt	parts per trillion or nanograms per liter (ng/L)
ppq	parts per quadrillion or picogram per liter (pg/L)
PCtL	picoctries per liter (a measure of radiation)

## Terms Used in This Report

## Sources of Drinking Water and Contaminants that May Be Present in Source Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

## Regulation of Drinking Water and Bottled Water Quality

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

## About Your Drinking Water Quality

### Drinking Water Contaminants Detected

Tables 1, 2, 3, 4, 5, 6, and 8 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detectations	MCL	PHG	Typical Source of Contamination	
Sodium (ppm)	10/22/2022	23	19-24	None	None	Salt present in the water and is generally naturally occurring salt ions present in the water, generally magnesium and calcium, and are	
Hardness (ppm)	10/22/2022	233	220-240	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are	

Table 3. Sampling Results for Sodium and Hardness

Copper (ppm)	09/27/2022	5	0.165	0	1.3	0.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Lead (ppb)	09/27/2022	5	0	0	15	0.2	Internal corrosion of household plumbing systems; erosion of natural deposits from industrial discharges from industrial manufacturers; water pluming systems

Complete if lead or copper is detected in the last sample set.

Table 2. Sampling Results Showing the Detection of Lead and Copper

(a) Routine and repeat samples are total coliform-positive and either is E. coli-positive or system fails to take repeat samples following E. coli-positive routine sample or system fails to analyze total coliform-positive repeat sample for E. coli.

(b) Routine and repeat samples are total coliform-positive and either is E. coli-positive or system fails to take repeat samples following E. coli-positive routine sample or system fails to analyze total coliform-positive repeat sample for E. coli.

E. coli	0	0	(a)	0	Human and animal fecal waste
Microbiological Contaminants	Highest No. of Months in Violations	No. of Violations	MCL	MCLG	Typical Source of Bacteria

Complete if bacteria are detected.

Table 1. Sampling Results Showing the Detection of Coliform Bacteria

						usually naturally occurring
--	--	--	--	--	--	-----------------------------

**Table 4. Detection of Contaminants with a Primary Drinking Water Standard**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
Turbidity	10/22/2021	0.1	0.0-0.32	TT	NA	<p>Soil Runoff.</p> <p>Turbidity has no health effects. However, high levels of turbidity can interfere with disinfection and provide a medium for microbial growth.</p> <p>Turbidity may indicate the presence of disease causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.</p>	
Gross Particle Activity (pCi/L)	Alpha Activity	10/22/2021	1.33	4.86	15 pCi/L	(0)	<p>Erosion of natural deposits.</p> <p>Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.</p>
Combined Radium 226 & 228 (pCi/L)	Multiple sample dates between Feb – Oct 2016	0.48	0.0636-2.36	5 pCi/L	(0)	<p>Erosion of natural deposits. Some people who drink water containing radium 226 or 228 in excess of the MCL over many years may have an increased risk of getting cancer</p>	

Arsenic (ug/L)	10/22/20	0.73	ND-2.2	10	0.004	Erosion of natural deposits; runoff from orchards; glasses and electronics production wastes. Some people who drink water containing arsenic in excess of the MCL over many years may experience skin damage or circulatory system problems and may have an increased risk of getting cancer.	10/22/20	153.3	None	Detectd - 240	1000	Barium (mg/L)
Fluoride (F) (mg/L)	10/22/20	0.23	0.16-0.38	2.0		Erosion of natural deposits; water softening which promotes strong teeth; additive to water softeners. Some people who drink water containing fluoride in excess of the federal MCL of 4 mg/L over many years may get bone disease, including many years of pain and tenderness of the bones. Children who drink water containing fluoride in excess of the state MCL of 2 mg/L may get tooth decay.	10/22/20	23	0.23			Fluoride (F) (mg/L)
Nitrate (as N) (mg/L)	2023	3.725	1.4-7.1	10	10	Rainfall and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits below the age of six months who drink water containing nitrates in excess of the MCL of 10 mg/L may get tooth decay.						Nitrate (as N) (mg/L)

						MCL may quickly become seriously ill and, if untreated, may die because high nitrate levels can interfere with the capacity of the infant's blood to carry oxygen.  Symptoms include shortness of breath and blueness of the skin. High nitrate levels may also affect the oxygen carrying ability of the blood of pregnant women.
Uranium (pCi/L) Well #3	10/09/20 18	5.2	2.4-6.7	20	0.43	Erosion of natural deposits.  Some people who drink water containing uranium in excess of the MCL over many years may have kidney problems or an increased risk of getting cancer.

**Table 5. Detection of Contaminants with a Secondary Drinking Water Standard**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	SMCL	PHG (MCLG)	Typical Source of Contaminant
Chloride	10/22/2021	19	17-20	500		
Zinc (mg/l)	10/09/2018	0.83	0.66-1.20	5.0	None	Runoff/leaching from natural deposits; industrial wastes
Total Dissolved Solids (mg/l)	10/09/2018	380	360-390	1,000	None	Runoff/leaching from natural deposits
Specific Conductance ( $\mu\text{S}/\text{cm}$ )	03/02/2023	553	550-570	1600	None	Substances that form ions when in water; seawater influence.

Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. Nitrate for an infant, or you are pregnant, you should ask advice from your health care provider. Individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen. Resulting in a serious illness; symptoms include shortness of breath and blueness of the skin.

#### Additional Special Language for Nitrate, Arsenic, Lead, Radon, and Cryptosporidium:

Additional Special Language for Nitrate, Arsenic, Lead, Radon, and Cryptosporidium:

Hotline (1-800-426-4791) or at <http://www.epa.gov/lead>. Companies is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [Optional: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <http://www.epa.gov/lead>.

Lead-Specific Language: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. South Fork Estates Mutual Water Company is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [Optional: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791).

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

#### Additional General Information on Drinking Water

Sulfate (mg/L)	10/09/2018	23.67	17.35	500	None	Rainoff/leaching from natural deposits;	Industrial wastes
----------------	------------	-------	-------	-----	------	---	-------------------
