APPENDIX B: eCCR Certification Form (Suggested Format)

Consumer Confidence Report Certification Form

(To be submitted with a copy of the CCR)

Water System Name:	City of Davis
Water System Number:	CA5710001

The water system named above hereby certifies that its Consumer Confidence Report was distributed on June 3, 2024 (*date*) to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water (DDW).

Certified by:

Name: Matt Deusenberry	Title: Water Division Manager
Signature: 	Date: 06/28/2024
Phone number: (530) 757-5686	

To summarize report delivery used and good-faith efforts taken, please complete this page by checking all items that apply and fill-in where appropriate:

☐ CCR was distributed by mail or other direct delivery methods (attach description of other direct delivery methods used).

☒ CCR was distributed using electronic delivery methods described in the Guidance for Electronic Delivery of the Consumer Confidence Report (water systems utilizing electronic delivery methods must complete the second page).

☒ "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:

- ☒ Posting the CCR at the following URL: https://www.cityofdavis.org/city-hall/public-works-utilities-and-operations/water/water-quality-information/annual-water-quality-report
- ☐ Mailing the CCR to postal patrons within the service area (attach zip codes used)
- ☒ Advertising the availability of the CCR in news media (attach copy of press release)

- ☐ Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
- ☐ Posted the CCR in public places (attach a list of locations)
- ☐ Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
- ☐ Delivery to community organizations (attach a list of organizations)
- ☒ Publication of the CCR in the electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
- ☒ Electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
- ☒ Other (attach a list of other methods used)

☐ *For systems serving at least 100,000 persons*: Posted CCR on a publicly-accessible internet site at the following URL: www._____

☐ *For privately-owned utilities*: Delivered the CCR to the California Public Utilities Commission

Consumer Confidence Report Electronic Delivery Certification

Water systems utilizing electronic distribution methods for CCR delivery must complete this page by checking all items that apply and fill-in where appropriate.

☒ Water system mailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available website where it can be viewed (attach a copy of the mailed CCR notification). URL: www.cityofdavis.org/waterquality

☐ Water system emailed a notification that the CCR is available and provides a direct URL to the CCR on a publicly available site on the Internet where it can be viewed (attach a copy of the emailed CCR notification). URL: www._____

☐ Water system emailed the CCR as an electronic file email attachment.

☐ Water system emailed the CCR text and tables inserted or embedded into the body of an email, not as an attachment (attach a copy of the emailed CCR).

☐ *Requires prior DDW review and approval.* Water system utilized other electronic delivery method that meets the direct delivery requirement.

Provide a brief description of the water system's electronic delivery procedures and include how the water system ensures delivery to customers unable to receive electronic delivery.

The 2023 Water Quality Report (CCR) was posted on the City's webpage at the link above. A utility bill insert was included with the June utility bill through the mail and the insert provided the direct URL and directions on how customers could obtain a PDF version or hard copy of the report. An e-mail with a link to the June Utility Bill Insert and the QR code for the 2023 Water Quality Report was sent on 6/26/2024 to apartment property managers in Davis in order to be posted in common areas at apartments/rental properties.

An ad was included in the Davis Enterprise (the local newspaper) on 6/23/2024 and included information on how to view the report through the direct URL. The City included the link to the 2023 Water Quality Report in an e-blast that was sent out via the GreenerDavis – City of Davis Conservation News listserve on 6/4/2024 & 6/20/2024. Social media postings of the 2023 Water Quality Report and its availability were posted on the GreenerDavis Facebook and Instagram page on 6/4/2024 and 6/23/2024.

This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c) of the California Code of Regulations.

Attachment A

City of Davis 2023 Water Quality Report

Davis
CALIFORNIA

2023 WATER QUALITY REPORT
(CONSUMER CONFIDENCE REPORT)
PWS #5710001

Important Information About Your Water Quality

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

此份有关你的食水报告,内有重要资料和讯息,请找他人为你翻译及解释清楚。

Message to Our Valued Water Customers

The City of Davis is pleased to provide the 2023 Water Quality Report to you. Last year, as in years past, the City of Davis is proud to report that our system did not have any violations of any maximum contaminant levels for water quality.

The City collected more than 1,500 water samples throughout the year and tested for over 125 contaminants, of which only those described in this report were detected. Additionally, numerous samples of the surface water at the Woodland-Davis Regional Water Treatment Facility are analyzed prior to the finished water being delivered to Davis.

This report is a summary of last year's water quality. It shows the results of our monitoring for the period of January 1 to December 31, 2023 and may include earlier monitoring data. Also included are helpful details about where your water comes from, what it contains and how it compares to State water quality standards.

Sincerely,

Stan Gryczko
Public Works Director

Matt Deusenberry
Water Division Manager

Community Participation

The Davis City Council and relevant City Commissions receive public comments at their regularly scheduled meetings. For City Council meeting dates and times, please check the City's website at CityofDavis.org or call the City Clerk's Office at 530-757-5648. Commission meeting dates, times and topics can be found at the City Commissions webpage. Additionally, you can sign up to receive email notifications for meeting dates and topics at www.CityofDavis.org/City-Hall/eNotification.

Our Continuing Commitment to You

Our staff of highly trained and certified operators are available around the clock to provide service for any emergency related to the City's water supply. Through teamwork, professionalism and hard work, the City of Davis Public Works Utilities and Operations Water Division provides drinking water that meets or exceeds all State and Federal health standards.

To Our Water Customers

This report is prepared in accordance with the United States Environmental Protection Agency (U.S. EPA) and the State Water Resources Control Board – Division of Drinking Water (State Water Board) regulations under the Safe Drinking Water Act that requires water providers to report annual water quality information to their customers. This publication lists all constituents detected in your water supply and information about your water source, what it contains, how it compares to State and Federal standards and other related information.

For more information about this report, or for any questions relating to your drinking water, please contact the City of Davis Public Works Utilities and Operations Department at Water@CityofDavis.org or 530-757-5686.

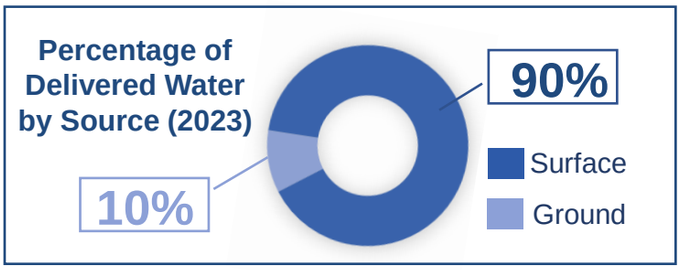
Water Sources, Treatment and Operations

Where Does Our Water Come From?

The City of Davis water system is a conjunctive use system, which means it utilizes both surface water and groundwater for its drinking water supply.

The primary water source is surface water (water that collects on the surface of the ground), supplied from the Sacramento River and treated at the Woodland-Davis Regional Water Treatment Facility. The City's maximum surface water allotment (or how much the City is allowed to get) is 10.2 million gallons per day.

The City currently has 5 deep aquifer wells and 4 intermediate wells. The majority of groundwater delivered is from the deep aquifer wells while the intermediate aquifer wells are typically only operated to ensure they are exercised properly, as required for water quality testing, or to meet peak demand. In 2023, 0.1% of the drinking water (groundwater) provided was from the intermediate aquifer wells with the remainder from the deep aquifer wells.



Source Water Assessments

Surface Water
The Sacramento River Watershed Sanitary Survey 2020 Update Report, a source water assessment, was conducted by several agencies and can be obtained at WDCWA Operations Water Quality Reports. The report identified eight potential source water/watershed contaminant sources to the Sacramento River: agricultural drainage, livestock, forest activities, river corridor and river recreation, stormwater and urban runoff, industrial NPDES dischargers, wastewater facilities and watershed spills. The report stated that, "overall, the Sacramento River continued to provide good quality raw water. The raw water can currently be treated to meet all drinking water standards using conventional water treatment processes. There are no long-term constituent trends prevalent in the raw water that necessitates special treatment processes at this time."

Groundwater
A source water assessment for the City of Davis' groundwater wells was completed in 2002 and an assessment was conducted for Well 34 in January 2017. The City's groundwater sources are most vulnerable to historic and present-day land use activities, including agricultural and light industrial use. Additionally, the water source is vulnerable to naturally occurring contaminants such as selenium and chromium. Overall, there is a slight to moderate threat that the City's water source could become contaminated by these land use activities and naturally occurring contaminants. For information on the summary of the assessment, contact City Water Quality Staff at 530-757-5686 or e-mail Water@CityofDavis.org

Water Treatment Process

Surface Water: Surface water is taken in from the Sacramento River and pumped to the Regional Water Treatment Facility in Woodland. This raw water is treated by traditional surface water techniques, including flash mixing and granular media filtration to remove microorganisms and other contaminants. The treated water is dosed with sodium hypochlorite (chlorine) for disinfection and with phosphoric acid to create ortho-phosphate for corrosion control. For more information on the treatment process, visit the WDCWA Operations Water Treatment webpage.

Groundwater: Groundwater is treated at each well head with chlorine for disinfection. There is a manganese treatment facility at Well 32, which removes manganese from the source water at that well before entering the distribution system.

Fluoride is not added to either the surface water or the groundwater. Fluoride is naturally occurring in low levels in the groundwater.

Distribution System Operations

After treatment at the Regional Water Treatment Facility in Woodland, the surface water is pumped into the transmission line and travels six miles to Davis. Surface water enters into the City's distribution system at a total of six turn-out locations with three main turn-outs located in west, central and south Davis.

The City's drinking water wells pump groundwater directly from underlying aquifers into either the surface water transmission line or the distribution system, depending on the well. The four deep aquifer wells pump groundwater into the transmission line which is then blended with the surface water prior to entering the distribution system and arriving at the tap.

The ratio of surface water to groundwater varies throughout the year. In warmer months when there is higher water demand, groundwater is supplemented to meet demand. Wells are still operated periodically during the low demand months to ensure that they are exercised properly and as required for water quality testing.

Water Quality Testing

The City's water quality monitoring program consists of sampling certain constituents on a weekly, monthly, quarterly or annual basis. Water samples are collected at sampling stations within the distribution system, at groundwater wells and at the point of entry for surface water entering the City's water system. During the past year, the drinking water was tested for over 125 regulated and unregulated constituents. Samples are analyzed externally by certified contract laboratories and results of all samples required by regulations are submitted to the State Water Board to ensure compliance.

Water Hardness and Water Softeners

The City frequently receives questions on the current level of hardness of the drinking water and whether water softeners are recommended.

While water softness is often a matter of personal preference, when the City relied 100% on groundwater prior to 2016, water softeners had been installed in many Davis homes because of high hardness levels. Now that the City's primary water source is surface water and the majority of groundwater used is pumped from the deep aquifer, the level of hardness is significantly lower. For example, in 2015, the weighted average for hardness was 306 parts per million (ppm) or 18 grains per gallon (gpg); whereas in 2023, the weighted average for water hardness was reduced to 75 ppm or 4.4 gpg.

Water hardness within Davis may fluctuate throughout the year, but rarely exceeds 120 ppm. During the winter months, when the City delivers mostly surface water, the level of hardness of the water may be lower than it is during the summer months when demand is enough that groundwater wells have to run regularly. The City does collect monthly hardness samples throughout the year in order to better understand the current level of hardness. Visit the Water Quality Results webpage to view results.

If you are still using a water softener at your home, please consider bypassing it to determine if the current level of water hardness is acceptable for your home, or adjust the grains setting on the water softener accordingly. Reducing or eliminating the use of water softeners can save water and energy costs.

Minimizing the use of water softeners is also important to protect water quality, as some water softeners release large quantities of salts into the City's wastewater system. These salts are not removed, even after the water is processed through the City's Wastewater Treatment Plant. The salts remain in the treated water that feeds the local wetlands, increasing the salt loading of the wetlands and rivers and contributes to a variety of problems for the Sacramento Valley.

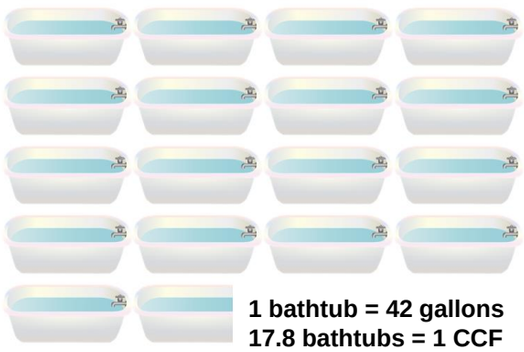
Water Conservation and Weather Variability

The weather in California is highly variable with prolonged dry periods and intervals of significant precipitation. During recent dry years, many residents in Davis instituted long-term changes to their water use by replacing turf areas with low-water use plantings, replacing older appliances and fixtures with water and energy efficient models and making changes in everyday water use habits. Although some emergency drought restrictions were lifted in Spring 2022, the State-wide water-waste restrictions enacted in 2022 remain in place. Learn more at https://www.cityofdavis.org/city-hall/public-works-utilities-and-operations/water/water-conservation/drought-information-water-use-restrictions.

The AquaHawk online customer water use portal is available to City of Davis water customers. AquaHawk allows customers to view their hourly water usage and set and then receive usage alerts. For more water savings tips and information on AquaHawk, water-wise landscaping and links to helpful indoor and outdoor water use efficiency websites, visit www.SaveDavisWater.org.

Water Usage & Water Leaks

The City bills for water use by CCF. A CCF (hundred cubic feet) is 748 gallons. This is the equivalent of the amount of water it would take to fill 17.8 bathtubs (each bathtub = 42 gallons). Davis water customers may also see water usage displayed in AquaHawk and other sources as cubic feet (cf) and/or gallons. 1 cf = 7.48 gallons. In addition to AquaHawk, mentioned above, the City's online utility billing site allows customers to view past utility bills, water consumption reports and make payments online.



1 bathtub = 42 gallons
17.8 bathtubs = 1 CCF

Water customers are often surprised by the amount of water typical water leaks can waste over time. A leaky faucet that drips at the rate of one drip per second can waste more than 3,000 gallons per year. An irrigation system that has a hole 0.031 inches in diameter (about the thickness of the tip of a ballpoint pen) can waste about 6,300 gallons of water per month. One of the most common leaks reported to the City are toilet leaks. The volume for toilet leaks can vary greatly depending upon the type of leak. Many toilet leaks are silent, especially if they are toilet flapper leaks. AquaHawk can be used to assist in finding leaks in the home and around the property. Visit SaveDavisWater.org for more information on leak detection.

What Does Our Water Contain?

The Safe Drinking Water Act requires all water purveyors to sample their source and treated water for biological, inorganic, organic and radioactive constituents. The State Water Board allows systems to monitor for certain constituents less than once per year because the concentration of these contaminants do not change frequently. Some of the data in this year's report, though representative, are more than one year old.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Substances That Could Be in Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial Contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic Contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and Herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- Organic Chemical Contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.
- Radioactive Contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (U.S. EPA) and the State Water Resource Control Board (State Water Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

Important Health Information

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Nitrate in Drinking Water

Nitrate in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.

Arsenic in Drinking Water

While your drinking water meets the Federal and State standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The U.S. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Report a Water Quality Concern

Do you have a question or concern about your water quality? Are you experiencing any problems with your drinking water supply, such as discolored water or unusual taste or odor? Contact the Public Works Utilities and Operations Department during regular business hours (M-F 7:00 a.m. to 3:30 p.m.) at 530-757-5686 or contact the non-emergency Police Department number after hours at 530-747-5400.

How to Read the Detection Tables

The City is required to monitor drinking water for specific constituents on a regular basis and monitors several constituents more frequently than required by the regulations. While most monitoring was conducted in 2023, the State Water Board allows the monitoring of some constituents less than once per year because concentrations do not change frequently. Some of the data points, though representative, are more than one year old.

The results of the City's monitoring are reported in the tables of detected constituents on the following pages. For help with interpreting this table, see "Water Quality Definitions and Abbreviations" below.

1. **Start** with a **Constituent** and read across.
2. **Unit** is the specific unit of measurement for each constituent.
3. **Year** is the year tests were conducted. For most constituents, this is 2023, but it could be a previous year.
4. **Maximum Contaminant Level** shows the highest level of substance/constituent allowed by regulations. This is reflected by either MCL, SMCL or MCLG.
5. **Public Health Goal** is the goal level for that substance (this may be lower than what is regulatorily allowed). This is reflected by either PHG, MCLG or MRDLG.
6. **Range** tells the highest and lowest amounts detected in the drinking water.
7. **Weighted Average** is the average amount of a constituent detected in the drinking water and is based on the detected result for each water source and the percentage of each source to the system.
8. **Major Sources** tells where the substance usually originates and describes the most likely ways a constituent enters the drinking water.

Water Quality Definitions and Abbreviations

AL (Regulatory Action Level): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.
MCL (Maximum Contaminant Level): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste and appearance of drinking water.
MCLG (Maximum Contaminant Level Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the US Environmental Protection Agency.
MRDL (Maximum Residual Disinfectant Level): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MRDLG (Maximum Residual Disinfectant Level Goal): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
N/A: Not Applicable
ND: Not Detected
NS: No Standard
NTU: Nephelometric Turbidity Units (a measure of clarity)
pCi/L: Picocuries per liter (a measure of radioactivity)
PDWS (Primary Drinking Water Standard): MCLs, MRDLs and treatment techniques (TTs) for contaminants that affect health, along with their monitoring and reporting requirements.
PHG (Public Health Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.
PPM: Parts per million or milligrams per liter (mg/L)
PPB: Parts per billion or micrograms per liter (µg/L)
PPT: Parts per trillion or nanograms per liter (ng/L)
SMCL (Secondary Maximum Contaminant Level): SMCLs are set to protect the odor, taste and appearance of drinking water.
TT (Treatment Technique): A required process intended to reduce the level of a contaminant in drinking water.
T.O.N.: Threshold odor number (a measure of odor)
µS/cm: Microsiemens per centimeter (a unit expressing the amount of electrical conductivity of a solution).
90th Percentile: The levels reported for lead and copper represent the 90th percentile of the total number of sites tested. The 90th percentile is equal to or greater than 90% of our lead and copper detections.

Did you know The City delivered 3 billion gallons of drinking water in 2023.

Summary of Detected Constituents

PRIMARY DRINKING WATER STANDARDS – Regulated to protect your health
Constituents in bold text were exceedances, see the last page for more information and for footnotes.

Constituent	Unit	Year	MCL or (MRDL)	PHG, (MCLG), or [MRDLG]	Range	Weighted Average	Major Sources
Aluminum	ppm	2023	1	0.6	ND – 0.07	ND	Erosion of natural deposits; residue from some surface water treatment processes
Arsenic	ppb	2023	10	0.004	ND – 8	0.5	Erosion of natural deposits; runoff from orchards; glass & electronics production wastes
Barium	ppm	2023	1	2	ND – 0.2	ND	Discharges of oil drilling wastes and from metal refineries; erosion of natural deposits
Chromium (Total)	**ppb**	**2023**	**50**	**(100)**	**ND – 50***	**ND**	**Discharge from steel and pulp mills and chrome plating; erosion of natural deposits**
Carbon Tetrachloride	**ppt**	**2023**	**500**	**100**	**ND – 560***	**ND**	**Discharge from chemical plants and other industrial activities**
Fluoride	ppm	2023	2	1	ND – 0.44	ND	Erosion of natural deposits; discharge from fertilizer and aluminum factories
Nitrate (as N)	ppm	2023	10	10	ND – 5.8	ND	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Selenium	ppb	2023	50	30	ND – 25	ND	Discharge from petroleum, glass, & metal refineries; erosion of natural deposits; discharge from mines & chemical manufacturers; runoff from livestock lots (feed additive)
Gross Alpha	pCi/L	2021	15	(0)	ND – 5.34	ND	Erosion of natural deposits
Gross Beta[A]	pCi/L	2018	50	(0)	ND – 10.45	ND	Decay of natural and man-made deposits
Uranium[B]	pCi/L	2021	20	0.43	ND – 5.5	ND	Erosion from natural deposits
Point of Entry for Surface Water							
Bromate	ppb	2023	10	0.1	ND – 1	ND[C]	Byproduct of drinking water disinfection
Total Organic Carbon	ppm	2023	TT	N/A	0.79 – 1.4	1.12[C]	Various natural and manmade sources
Distribution System							
Total Trihalomethanes	ppb	2023	80	N/A	11 – 33	26[D]	Byproduct of drinking water disinfectant
Total Haloacetic Acids	ppb	2023	60	N/A	4 – 12	9[D]	Byproduct of drinking water disinfectant
Chlorine	ppm	2023	(4.0)	[4.0]	0.2 – 1.3	0.69[C]	Drinking water disinfectant added for treatment
Total Coliform Bacteria	% positive	2023	5%	0%	0% - 0.1% positive sample[E] Samples Collected = 1043		Naturally present in the environment

Summary of Detected Constituents (continued)

LEAD AND COPPER RULE – Tap water samples collected from sample sites throughout the community

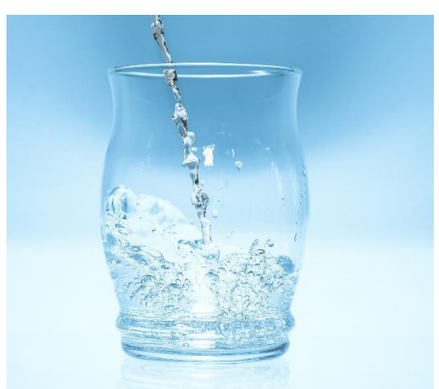
Constituent	Unit	Year	AL	PHG	90th Percentile	Sites Above AL/Total Sites	Major Sources
Lead[F]	ppb	2022	15	0.2	ND	0/32	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper	ppm	2022	1.3	0.3	0.092	0/32	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

SECONDARY DRINKING WATER STANDARDS – Regulated for aesthetic qualities

Constituent	Unit	Year	SMCL	Range	Weighted Average	Major Sources
Chloride	ppm	2023	500	7 – 78	9	Runoff/leaching from natural deposits
Iron	ppb	2023	300	ND – 99	ND	Leaching from natural deposits; industrial wastes
Manganese	ppb	2023	50	ND – 30	0.4	Leaching from natural deposits
Odor – Threshold	T.O.N.	2023	3	ND – 1.3	1.2	Naturally-occurring organic materials
Specific Conductance	µS/cm	2023	1600	230 – 1300	265	Substances that form ions when in water
Sulfate	ppm	2023	500	20 – 120	23	Runoff/leaching from natural deposits; industrial waste
Total Dissolved Solids (TDS)	ppm	2023	1000	150 – 790	170	Runoff/leaching from natural deposits
Turbidity	NTU	2023	5	ND – 0.56	0.1	Soil runoff

Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. City of Davis is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.EPA.Gov/Lead.



Testing for Cryptosporidium

Cryptosporidium is a microbial pathogen found in surface water throughout the United States. Cryptosporidium was detected three times in the untreated surface water during 2020. However, the Regional Water Treatment Facility is designed to remove and/or deactivate these pathogens to ensure that this pathogen is not present in the finished water.

Summary of Detected Constituents (continued)

CONSTITUENTS WITH NO DRINKING WATER STANDARD[G]

Constituent	Unit	Year	Range	Weighted Average
Alkalinity	ppm	2023	88 – 540	100
Boron	**ppb**	**2023**	**56 – 1100***	**84**
Bicarbonate	ppm	2023	88 – 540	100
Calcium	ppm	2023	15 – 53	15
Hardness as $CaCO_3$	ppm	2023	61 – 550	75
Hexavalent Chromium[H]	ppb	2023	ND – 49	0.4
Potassium	ppm	2023	ND – 2.8	0.1
Magnesium	ppm	2023	6.1 – 100	8.8
Sodium	ppm	2023	22 – 120	29
pH		2023	7.7 – 8.2	8

Footnotes

(A) The State Water Board considers 50 pCi/L to be the level of concern for beta particles.
(B) The uranium result in pCi/L is based on a calculation.
(C) This displays the average of sample results, not a weighted average.
(D) Average given is the maximum of all local running annual averages calculated during 2023.
(E) 1 sample out of 1,043 samples taken in the distribution system in 2023 was present for total coliform bacteria, but a re-sample of the location upstream and downstream of the site, did not detect the bacteria, verifying no potential problems in the water treatment or distribution.
(F) In addition to residential lead and copper sampling, two schools in 2023 requested lead sampling to test their internal plumbing. The lead sample requests were to satisfy a CA childcare requirement and the City did not perform the sampling.
(G) These constituents are of interest to some consumers; however, they have no regulatory thresholds.
(H) In 2023, there was no MCL for hexavalent chromium. A new MCL of 10 ppb was adopted by the State Water Resources Control Board in 2024 for water system compliance by 2026.

About Our Exceedances

Carbon Tetrachloride. Carbon Tetrachloride is a volatile organic which was used as a commercial/industrial solvent in dry cleaning prior to 1960. One municipal well, Well 24, had concentrations as high as 560 ppt in three samples collected in 2023. However, Well 24 has not provided drinking water to the system since 2021. Some people who use water containing carbon tetrachloride in excess of the MCL over many years may experience liver problems and may have an increased risk of getting cancer.

Chromium. Chromium is found naturally in the groundwater. One municipal well, Well 27, had a concentration of 50 ppb in one sample collected in 2023. However, Well 27 did not provide drinking water to the system in 2023. Some people who use water containing chromium in excess of the MCL over many years may experience allergic dermatitis.

Boron. Boron is not a regulated constituent but is considered by the State Water Resources Control Board to be a constituent of concern. One municipal well, Well 27, had a concentration of boron above the notification level of 1100 ppb in one sample collected in 2023. However, Well 27 did not provide drinking water to the system in 2023. Boron is sampled monthly at five dedicated sampling stations in Davis with results available at https://www.cityofdavis.org/city-hall/public-works-utilities-and-operations/water/water-quality-information/water-quality-results.

PFAS in Water

Per- and polyfluoroalkyl substances (PFAS) (also known as “forever chemicals” and perfluorinated compounds) are a large group of human-made chemicals that do not occur naturally in the environment and are resistant to heat, water and oil. PFAS were first used in the 1940’s to create products with stain-, weather- and water-resistance. As a result, PFAS are in hundreds of consumer products. PFAS are resistant to breaking down in the environment, which leads to contamination of soils and groundwater at sites that produced, manufactured or used PFAS and in waste disposal areas where consumer products are thrown away. PFAS can be introduced into drinking water when products containing PFAS are used or spilled on the ground and percolate down into underground aquifers, or directly into surface waters. The City of Davis started sampling for PFAS within the distribution system in 2024 (as part of the U.S. EPA Unregulated Contaminant Monitoring Rule, UCMR5). The treated groundwater and surface water will be sampled for 29 PFAS substances two times during 2024. All sampling will be reported on the 2024 water quality report if the minimum reporting level of PFAS is exceeded. In 2023, WDCWA started sampling quarterly for 25 types of PFAS from the raw surface water entering the treatment plant. All sampling results were below the minimum reporting level for PFAS. The City of Davis has a PFAS in Water FAQ for more information.

For more information about this report, please contact City of Davis Public Works Utilities and Operations at Water@CityofDavis.org or 530-757-5686.

CCR Notification

Information Regarding the 2023 WATER QUALITY REPORT

(Consumer Confidence Report)

This notice provides instructions on how to obtain important information about your drinking water.

Este reporte contiene las instrucciones mas recientes para obetener informacion importante sobre su agua potable.

此份有关你的食水报告,内有重要资料和讯息,请找他人为你翻译及解释清楚。

The 2023 Water Quality Report (also called the Consumer Confidence Report) provides information regarding your drinking water and covers water quality data from January 1, 2023 through December 31, 2023. This report contains details about the constituents detected in your drinking water, general information regarding the sources of water and how that water is delivered to your home, as well as other related topics, such as water conservation tips.

In 2023, the City's water supply did not have any violations of the maximum contaminant levels for water quality. The City delivered 3 billion gallons of drinking water in 2023 - 90% of which was surface water from the Sacramento River and 10% was groundwater from underlying aquifers. The delivery of surface water and using groundwater primarily from the deep aquifer has significantly improved the quality of the City's drinking water.

The City is required to monitor drinking water for specific constituents on a regular basis, either weekly, monthly, quarterly or annually depending on the constituent. Samples are collected from sampling stations within the distribution system, at municipal groundwater wells and as surface water enters the City.

The report includes both the range and the weighted average for each detected constituent. The range accounts for the lowest and highest reported concentration for the constituent in samples collected during the year. The weighted average takes into consideration the general chemical makeup of the source water based on the percentage of each source used.

There are several ways to view the 2023 Water Quality Report:

- Visit CityofDavis.org and type "water quality report" in the search box.
- Use the following URL: https://cityofdavis.org/waterquality
- Scan the QR code using a tablet or mobile device (data rates may apply) to visit the Water Quality Report webpage.
- To request an electronic or paper copy of the report or to speak with someone about the report:
  - Send an email to: Water@CityofDavis.org
  - Call Public Works Utilities and Operations at 530-757-5686

View as Webpage

Conserve Water: Rain or Shine

The weather in California is highly variable with prolonged dry periods and intervals of significant precipitation. Keeping this in mind, the City has permanent mandatory water-use restrictions in place to conserve water year-round no matter the weather. Although some emergency drought restrictions have been lifted, there are water-waste restrictions that remain in place.

Sprinkler irrigation is limited to a maximum of three days per week. The watering restrictions only apply to sprinkler/spray irrigation and do not apply to other methods of irrigation such as drip systems and hand-watering. Learn more in the PDF **Conserve Water Rain or Shine** or on the **City's water conservation pages**.

2023 Annual Water Quality Report

Do you have questions about water quality in Davis? The City has answers! The 2023 Water Quality Report is now available **online**. The City is pleased to report that in 2023, as in past years, the City's water supply did not have any violations of the maximum contaminant levels for water quality.

The U.S. Safe Drinking Water Act requires all community water systems to report annually on any regulated contaminants that were detected in the drinking water supply and provide this information to their water customers. The Annual Water Quality Report covers water quality data from January 1, 2023, through December 31, 2023. The report was posted to the City's website in early June 2024 and customers received notice of the report in their June City utility bills.

Message to Our Valued Water Customers

The City of Davis is pleased to provide the 2023 Water Quality Report to you. Last year, as in years past, the City of Davis is proud to report that our system did not have any violations of any maximum contaminant levels for water quality.

The City collected more than 1,600 water samples throughout the year and tested for over 125 contaminants, of which only those described in this report were detected. Additionally, numerous samples of the surface water at the Woodland Davis Regional Water Treatment Facility are analyzed prior to the finished water being delivered to Davis.

This report is a summary of last year's water quality. It shows the results of our monitoring for the period of January 1 to December 31, 2023 and may include earlier monitoring data. Also included are helpful details about where your water comes from, what it contains and how it compares to State water quality standards.

Sincerely,

Stan Grytdal
Public Works Director

Matt Dauenberg
Water Division Manager

Community Participation

The Davis City Council and relevant City Commissions receive public comments at their regularly scheduled meetings. For City Council meeting dates and times, please check the City's website at CityofDavis.org or call the City Clerk's Office at 530-757-5648. Commission meeting dates, times and topics can be found at the City Commissions webpage. Additionally, you can sign up to receive email notifications for meeting dates and topics at www.CityofDavis.org/City-Hall/notify-me.

To Our Water Customers

This report is prepared in accordance with the United States Environmental Protection Agency (U.S. EPA) and the State Water Resources Control Board – Division of Drinking Water (State Water Board) regulations under the Safe Drinking Water Act that requires water providers to report annual water quality information to their customers. This publication lists all constituents detected in your water supply and information about your water source, what it contains, how it compares to State and Federal standards and other related information.

Our Continuing Commitment to You

Our staff of highly trained and certified operators are available around the clock to provide service for any emergency related to the City's water supply. Through teamwork, professionalism and hard work, the City of Davis Public Works Utilities and Operations Water Division provides drinking water that meets or exceeds all State and Federal health standards.

Topics within Report	Page(s)
Information on Water Sources	2
Topics related to water in the home	3
Important health information	4
Information on how to read tables	5
Detection Tables	6-8

For more information about this report, or for any questions relating to your drinking water, please contact the City of Davis Public Works Utilities and Operations Department at Water@CityofDavis.org or 530-757-5686.

In addition to listing the various minerals and other elements (that are known collectively as "constituents") that were detected in the City's drinking water, the report also contains mandatory reporting on topics such as the sources of drinking water and how it is treated, potential sources of constituents and other related educational information. The report also contains information on water conservation and tips on understanding your water usage on the City utility bill.

View the City's **Water Quality Report** online. Customers can contact the City of Davis Water Division at Water@CityofDavis.org or call the Public Works Utilities and Operations Department at 530-757-5686 to request an electronic (PDF) or paper copy of the report.

Summer 2024 Water Supply Conditions

Each year in the summer months, the City will increase use of groundwater supplies as surface water from the Sacramento River can be more limited. Through the summer this year, it is anticipated that surface water will make-up approximately 85% of the water supply. With the increase in groundwater use, the City will

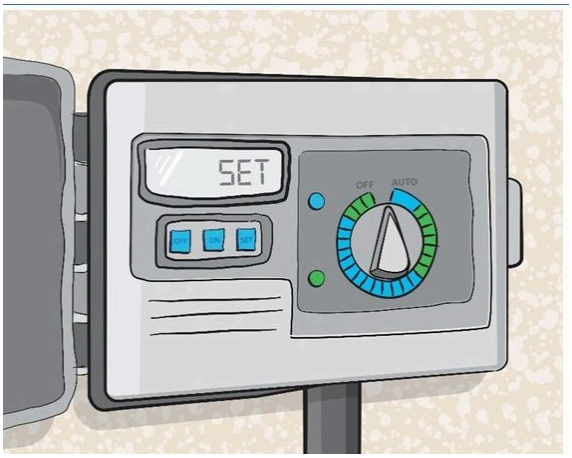
2023 Annual Water Quality Report

The 2023 City of Davis Annual Water Quality Report is now available. Please distribute the flier linked below to your tenants or post it in a prominent area, such as a common area or mailroom. The flier provides directions on how your tenants can access important information about their drinking water in the City of Davis.

2023 City of Davis Annual Water Quality Report Flier

City of Davis Water-use Restrictions



The weather in California is highly variable with prolonged dry periods and intervals of significant precipitation. Mindful of this, the City has permanent mandatory water-use restrictions in place to conserve water year-round no matter the weather. Although some emergency drought restrictions have been lifted, there are water-waste restrictions that remain in place. **View the Conserve Water Rain or Shine PDF**

The restrictions most relevant to multi-family properties during the summer months are listed below. The full list of water-use restrictions can be found on the **Drought Information and Water Use Restrictions page**

- Sprinkler irrigation is limited to a maximum of three days per week. The watering restrictions only apply to sprinkler/spray irrigation and do not apply to other methods of irrigation such as drip systems and hand-watering.
- No watering outdoors between 9 a.m. and 6 p.m., except with a hand-held container or hose with a shut-off nozzle, or for very short periods when adjusting a sprinkler system.
- No excessive water flow or runoff onto pavement, gutters or ditches from watering or irrigating landscapes or vegetation of any kind.
- No washing down paved surfaces unless for safety or sanitation, in which case a bucket, a hose with a shut-off nozzle, a cleaning machine that recycles water or a low-volume/high-pressure water broom must be used.

Free Summer Move-Out Waste Reduction Toolkit

Summer is typically a very busy time of the year for rental properties in Davis and there is usually a lot of extra waste generated from tenants moving out.

To encourage the responsible management of unwanted items as tenants are moving out, the City has developed a toolkit for property managers with downloadable graphics, social media posts, fliers and more. In addition to this toolkit, the City has launched an outreach campaign that will target all Davis residents. We will be sending out postcards, running ads online, and we have **a web page with move-out tips.**

Here are the tools that we have developed for property managers:
